In a shoe polisher, the combination, which comprises a rectangular-shaped box-like base having side walls and a bottom and provided with a substantially hollow arm extending from one end with a brush carried at the end of the arm, a tube positioned in the arm extending from the brush to the base to the inner end of which the open end of a collapsible tube of shoe polish may be attached, the side walls of said base formed with resilient arcuate upper edges extending inwardly and downwardly within the base and provided with parallel longitudinally disposed slots in the downwardly extending parts thereof, a roller having gears on both ends and a ratchet wheel on one end positioned in the base with the downturned parts of the side walls resiliently engaging the gears, said base having parallel rows of openings in the bottom thereof positioned to register with the gears at the ends of the roller providing gear racks therefor, an arbor on which the roller is mounted positioned in the base with the ends thereof extending into the slots in the downturned parts of the side walls and with the gears meshing with the said gear racks, an elongated pawl having teeth in the lower edge positioned in the base, a sheath in which the said pawl is slidably mounted positioned to maintain the teeth of the pawl in meshing relation with the teeth of the ratchet wheel of the roller, a bracket at the end of the base from which the brush arm extends on which the said sheath is mounted, a bell-crank pivotally mounted in said bracket with one arm pivotally connected to the elongated pawl, a button slidably mounted in a side wall of the base with an enlarged end extending from the base, means pivotally connecting the inner end of the button to the other arm of the bell-crank whereby inward movement of the button actuates the pawl whereby the roller is moved to force polish from the collapsible tube to the brush, and a cover for the said base.

for permitting limited relative axial displacement between them, an annular body of resilient material secured to said annular member and projecting therefrom, said resilient body having a flat axially directed sealing face adapted to

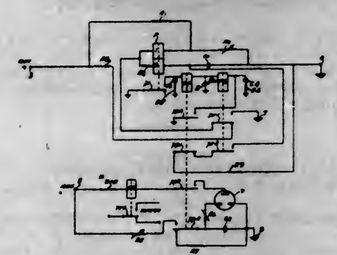
2,462,070
HERMETICALLY SEALED ELECTRIC INSULATOR
Pratulla Kumar Chatterjea and Stephen John Powers, London, England, assignors, by mesne assignments, to International Standard Elec-

between them, and means for applying to the said tube a short pulse synchronizing with each fly-back stroke, the said short pulse being adapted to insure the extinction of the said tube.

2,462,072

ing the inner end of the button to the other arm of the bell-crank whereby inward movement of the button actuates the pawl whereby the roller is moved to force polish from the collapsible tube to the brush, and a cover for the said base.

2,462,066
CIRCUITS FOR GENERATING ELECTRIC IMPULSES
Frederick Harry Bray and Frank Ewart Newton, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 20, 1943, Serial No. 511,100
In Great Britain December 23, 1942
3 Claims. (Cl. 175—373)

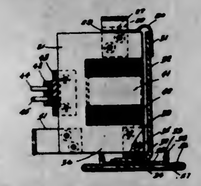


1. A device for periodically opening and closing an external electric circuit comprising a relay, means for causing the periodic movement of an armature of said relay from one of its positions to the other and back to the first position again, adjustable means for controlling the time at which said relay remains in each position, a cold-cathode gas discharge tube having a control electrode, a condenser, means for causing said condenser to charge when the armature of said relay moves to one of its positions, means connecting said condenser with said control electrode whereby the tube will discharge when the charge on said condenser reaches a predetermined amount, adjustable means for controlling the rate of charge of said condenser, switching means connected to said tube and controlled thereby for opening and closing the external circuit, and means for stopping the discharge of said tube when the armature of said relay moves to its other position.

2,462,067
RESILIENT LUBRICANT SEAL
Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application December 1, 1944, Serial No. 566,171
5 Claims. (Cl. 286—11)

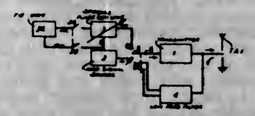
4. In a fluid-tight seal for relatively rotating parts, an annular base member adapted to be attached to one of said parts, an annular member generally surrounding said base member, a flexible annulus interconnecting said members for permitting limited relative axial displacement between them, an annular body of resilient material secured to said annular member and projecting therefrom, said resilient body having a flat axially directed sealing face adapted to engage the other of said parts, and means within said seal enclosed by said members for resiliently urging said members apart in the axial direction.

2,462,068
VIBRATORY POLISHER
Richard R. Butts, Miamisburg, Ohio
Application August 13, 1946, Serial No. 690,141
7 Claims. (Cl. 172—126)



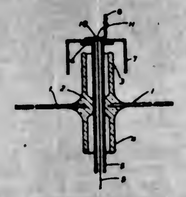
1. In a device of the class described the combination of an open bottomed casing, an electromagnet core rigidly mounted in upright position within the casing, an L-shaped armature assembly mounted for vibratory movement adjacent an upright edge of the core and having the free bottom end thereof turned under in spaced parallelism with the bottom edge of the core, a ball and slot bearing substantially limiting said end of said armature to reciprocation in parallelism with the bottom longitudinal edge of the core, a working plate detachably connected for reciprocation with said free end of said armature, and a working web fixed on the bottom face of said working plate.

2,462,069
RADIO COMMUNICATION SYSTEM
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 7, 1943, Serial No. 486,038
In Great Britain May 7, 1942
10 Claims. (Cl. 250—17)



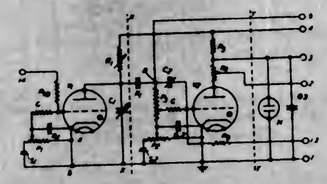
1. Radio communication apparatus comprising normal transmitting means for transmitting signals as a modulation of a normal carrier frequency, emergency transmitting means for transmitting said signals as a modulation of a plurality of carrier frequencies, a device responsive to reception of radio waves at substantially the normal carrier frequency from a source other than said normal transmitting means, and switching means adapted to be operated by said device in response to said reception to switch over from said normal transmitting means to said emergency transmitting means.

2,462,070
HERMETICALLY SEALED ELECTRIC INSULATOR
Prafulla Kumar Chatterjea and Stephen John Powers, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 1, 1945, Serial No. 570,888
In Great Britain February 11, 1944
6 Claims. (Cl. 174—151)



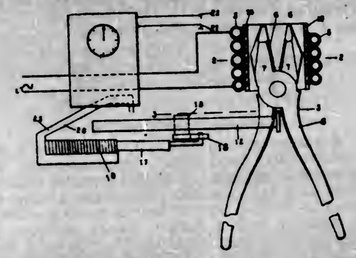
1. A terminal insulated from a metal sheet through an aperture of which said terminal passes, comprising a tubular member of fusible insulating material sealed to said sheet through said aperture, a conductor member smaller than the internal bore of said tubular member passing co-axially therethrough and being sealed to the internal surface of said tubular member at a constricted portion thereof adjacent said seal between said tubular member and said sheet, said constricted portion being located a substantial distance from both ends of said tubular member, and a metal cap member attached to the external end of said conductor member and having a skirt shrouding the end of said tubular member, the internal diameter of said skirt being larger than the external diameter of said tubular member.

2,462,071
GENERATION OF ELECTRIC PULSES
Prafulla Kumar Chatterjea, Dermot Min Ambrose, and James Kinloch Beney, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 30, 1945, Serial No. 585,670
In Great Britain March 30, 1944
6 Claims. (Cl. 179—171.5)



1. A device for generating electric pulses of rectangular shapes comprising means for generating periodic voltage waves having a sawtooth form, a gas filled tube having a grid, means to apply the said waves to the grid of said tube and means for adjusting the bias of said tube so that the tube is fired when the voltage of the applied wave reaches any predetermined value within a certain range, means responsive to the fly-back portion of the said sawtooth wave, to extinguish said tube thus generating a variable leading edge and a relatively fixed trailing edge for each pulse with an adjustable time interval between them, and means for applying to the said tube a short pulse synchronising with each fly-back stroke, the said short pulse being adapted to insure the extinction of the said tube.

2,462,072
PROCESS OF INDUCTIVELY HEATING PLIERS
Falih N. Darmara, Utica, N. Y., assignor to Utica Drop Forge & Tool Corporation, Whitestown, N. Y., a corporation of New York
Application December 18, 1943, Serial No. 514,816
2 Claims. (Cl. 219—13)



1. In the process of inductively hardening the opposed cutting edges and the irregular outer surface of the head portions of a pair of pliers, said cutting edges facing each other and comprising an integral part of the inside of said head portions, respectively, said pliers comprising at least a first and a second member each having a pivotable body portion connected together by a metal-to-metal pivotal connection with each member including said head portion and the cutting edge thereon extending away from one side of the pivotal connection, said first member having the inner end of its cutting edge integrally terminating with the pivotable body portion thereof and the inner end of the cutting edge of the second member terminating next adjacent to the pivotable body portion of the first member and defining a space therebetween, said inner terminating end of the cutting edge and said pivotable body portion of the first member being movable relative to each other, said members being composed of metal hardenable by heating and quenching, the process of inductively heating the cutting edges and the outer surface of the head portions of the pliers which comprises the steps of positioning the head portions pivotably open to space the cutting edges from each other, providing a coil having an inner surface defining an aperture having a substantially rectangular cross-section which is noncomforming to the irregular shape of said pivotally spaced head portions, said aperture having a cross-sectional area amply large to receive the pivotally spaced head portions with an appreciable and irregular air gap between said head portions and said inner surface, said coil having an entrance end and a terminal end, inserting the movable head portions of the pliers in the aperture with the pivotal connection located near said entrance end and with the cutting edges of the head portions extending in substantially the same general direction as the axis of the coil, energizing said coil with high frequency current of at least 10,000 cycles per second to thereby establish high frequency magnetic lines of flux extending in the same general direction as the axis of the coil and to establish opposite magnetic poles at the ends of the coil having a distance between the

poles greater than the length of the cutting edges, said lines of flux thereby establishing a heating current which flows about each head portion and the cutting edge thereon and in a plane

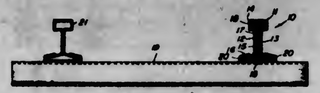
2,462,075
T SQUARE GAUGE
John F. Donahue, Philadelphia, Pa.
Application November 7, 1946, Serial No. 708,266
1 Claim. (Cl. 33—180)

energize the solenoid and cause stopping of the motor when the pump raises the liquid to a predetermined higher level, said last named means embodying electrically controlled holding means for maintaining the switch open after it has been

and first grid electrode respectively; a third resistance connecting the cathode to the negative terminal of the said source; a condenser connecting the anode to the first grid electrode; means for applying a constant positive potential to the third grid electrode with reference to the nega-

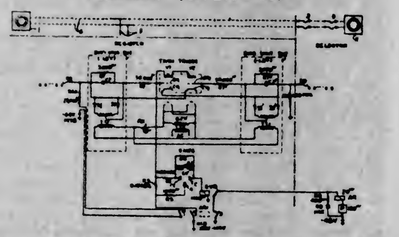
poles greater than the length of the cutting edges, said lines of flux thereby establishing a heating current which flows about each head portion and the cutting edge thereon and in a plane substantially perpendicular to the cutting edge, maintaining said head portions in said magnetic field until the cutting edges and the outer surface of the head portions are heated to a hardening temperature, and then removing the head portions from the magnetic field.

2,462,073
MINIATURE RAILROAD RAIL
Edward J. Daughton, Elmwood Park, Ill.
Application September 15, 1947, Serial No. 774,134
3 Claims. (Cl. 191—22)



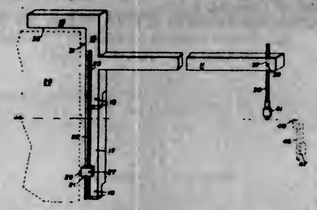
1. A miniature railroad rail, comprising a pair of electrically conductive complementary rail half-sections disposed in spaced parallel relation, each of said half-sections comprising a strip angulated to form a partial hollow head portion, a web member and a hollow flange portion, inturned bonding members provided on said head and flange portions, and a filler of insulating and bonding material provided between and within said half-sections to maintain the half-sections in rigid, spaced and insulated relationship, said bonding members being embedded in said filler.

2,462,074
BIASING POTENTIAL SWITCHING SYSTEM
Gerald Deakin, New York, N. Y., and Henry F. Herbig, Summit, N. J., assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 5, 1946, Serial No. 639,287
7 Claims. (Cl. 179—18)



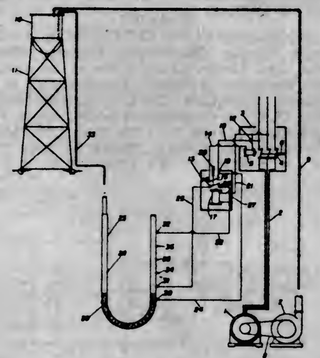
1. In a switching system, means for discharging electrons in two separate streams including grid, cathode and anode in each stream, a common receiving circuit connected to the anodes, means including magnet-operated stepping switches for applying a number of discrete potentials, one at a time to each grid, means for maintaining the discrete potentials applied to the grid in one stream in a constant relation with the potentials applied to the cathode in the other stream, the potential maintaining means including a resistance in series with each grid, a source of D. C. potential connected between said resistance and the potential applying means, and means operated from said common receiving circuit to control at least one of the stepping switch magnets when the discrete potentials applied to the different grids bear a predetermined relationship.

2,462,075
T SQUARE GAUGE
John F. Donohue, Philadelphia, Pa.
Application November 7, 1946, Serial No. 708,246
1 Claim. (Cl. 33—180)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A T-square gauge comprising a longitudinal bar, a crosshead on said bar provided with longitudinal grooves and having a leg portion at an angle thereto extending opposite said bar, a first contact point on an edge of said crosshead, a carrier engaged slidably in said grooves of said crosshead, a second contact point on the face of said carrier, and a third contact point on the edge of said leg portion, said first and second contact points being adapted to contact the face of a coupling and said third contact point being adapted to contact the periphery of such coupling simultaneously, and an extensible micrometer mounted proximate the end of said longitudinal bar parallel to said crosshead.

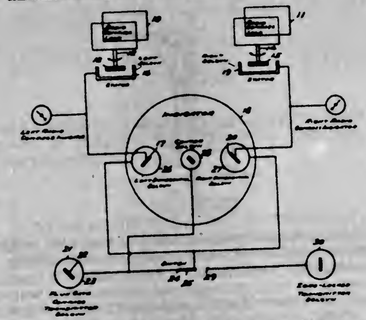
2,462,076
TANK FILLING CONTROL
James Burton Dryden, Carlsbad, N. Mex.
Application January 27, 1945, Serial No. 574,955
9 Claims. (Cl. 103—25)



1. In a control system for supplying liquid by a pump to a container, an electric motor for driving the pump, a line connection for the motor, a switch for the motor line, a solenoid for controlling the switch, a circuit for the solenoid, a spring biased switch in said circuit, and means controlled by the level of the liquid in the container for so controlling the solenoid circuit switch that said switch will be closed by the bias of its spring to energise the solenoid and cause operation of the motor when the liquid falls below a predetermined minimum level and will be opened against the bias of the spring to de-

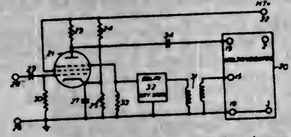
energise the solenoid and cause stopping of the motor when the pump raises the liquid to a predetermined higher level, said last named means embodying electrically controlled holding means for maintaining the switch open after it has been opened and until the liquid again falls to the first predetermined level.

2,462,077
NAVIGATIONAL SYSTEM
Llewellyn G. Daggar, Montgomery, Ala.
Application March 19, 1946, Serial No. 655,540
11 Claims. (Cl. 343—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a navigational system having a radio compass and a north seeking compass, a self synchronous transmitter arranged to duplicate the angular position of the radio compass antenna, a self-synchronous transmitter arranged to duplicate the angular position of said north seeking compass, an indicator device having a differential self-synchronous receiver, means for connecting said radio compass self synchronous transmitter and said north seeking compass self synchronous transmitter to said differential self synchronous receiver whereby said differential self synchronous receiver indicates the angular position of the radio compass loop as modified by the north seeking compass reading.

2,462,078
OSCILLATION GENERATOR
Charles William Earp, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application September 10, 1945, Serial No. 615,417
In Great Britain September 15, 1944
11 Claims. (Cl. 250—36)



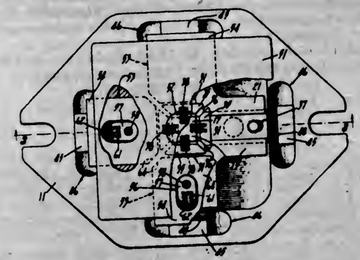
1. A stabilised electric multivibrator comprising a thermionic valve having in the order named, a cathode, first, second, and third grid electrodes and an anode; an operating source therefor having a substantially constant unidirectional potential; first and second resistances connecting the positive terminal of the said source to the anode

and first grid electrode respectively; a third resistance connecting the cathode to the negative terminal of the said source; a condenser connecting the anode to the first grid electrode; means for applying a constant positive potential to the third grid electrode with reference to the negative terminal of the said source; a resonant circuit connected in series with the cathode; and means for deriving output pulses from the second grid electrode.

2,462,079
APPARATUS FOR DRYING HAIR
Esther R. Elder, Pasadena, Calif., assignor of forty per cent to William R. Harriman, Hendo, ten per cent to Esther Anne Harrington, Pasadena, and ten per cent to Mary Ellen Peachman, San Francisco, Calif.
Application August 8, 1945, Serial No. 609,143
4 Claims. (Cl. 34—100)

1. In a hair drier, a hood having a space for the user's head and comprising an inner and an outer shell defining a downwardly extending, annular passage, the inner shell having an opening spaced from the edge of the hood, motor-driven air-moving means in said inner shell arranged to move air through said opening in a circuit through the passage and said space, a series of ports in the outer shell at least part way around the hood, a manifold over the ports, means to supply anhydrous gas connected with the manifold, the ports being arranged to project jets of the anhydrous gas crosswise of the movement of air in the circuit, and heating means disposed to heat fluid in the passage.

2,462,080
APPARATUS FOR SHAPING CONTAINERS
George C. Erb, Forest Hills West, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 28, 1944, Serial No. 570,148
5 Claims. (Cl. 153—25)



1. In a reforming die mechanism for converting a metallic tubular member having a side wall and a bottom into a cornered container, the combination of a vertically movable chuck disposed beneath and supporting the tubular member preparatory to reforming the same, a die part vertically movable towards and away from said chuck to clamp the bottom of the tubular member against the chuck, squeezer jaws carried by and

movable with said movable die part and also individually movable relative thereto, said jaws being located exteriorly of the tubular member while the latter is supported by said chuck, means disposed in the path of vertical movement of said die part towards said chuck for engaging and moving said squeezer jaws inwardly relative to

said plates and limbs and spaced from said anode forming a second gap between said plates and anode, and a metallic disc sealed into the wall of the device and forming part of a hollow resonator, said disc being positioned between said first and second gaps and having an aperture therein to allow of the passage of the electron

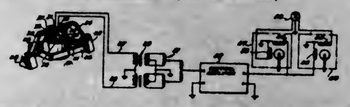
ment being rigidly attached to said metal conductor, said metal conductor being secured in

resonators, said antenna being less than a quarter wave length long at the highest operating frequency.

2,462,086
ELECTRON DISCHARGE DEVICE
John Heaver Fremlin and Stanley Gordon Tem-

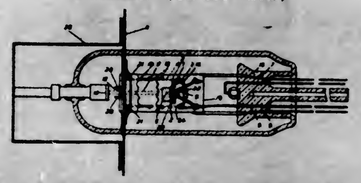
movable with said movable die part and also individually movable relative thereto, said jaws being located exteriorly of the tubular member while the latter is supported by said chuck, means disposed in the path of vertical movement of said die part towards said chuck for engaging and moving said squeezer jaws inwardly relative to the die part to engage and reshape the side wall of the tubular member by pressing inwardly against peripherally spaced parts thereof, whereby to form corners at the unpressed portions of the tubular member, and means for limiting vertical movement of said chuck in opposite directions before and during the die reshaping operation.

2,462,681
SERVOMOTOR SYSTEM
Orland E. Esval, Huntington, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application August 22, 1947, Serial No. 770,681
26 Claims. (Cl. 318—19)



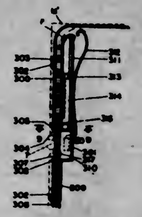
2. In a servo system for selectively operating a pair of servomotors in response to two variables, said servomotors each having two field windings, means for producing a signal voltage having a predetermined time phase for each of said variables and having a magnitude responsive to the magnitude of each of said variables, amplifying means for said voltage, means connecting said amplified voltage in parallel circuit with one field winding of each servomotor, and energising means for the other field winding of each servomotor, said energising means comprising two phase displaced voltages respectively arranged to be in phase unison with the time phase of the voltage occasioned by the occurrence of one of said variables and in approximate quadrature phase relation to the time phase occasioned by the other of said variables.

2,462,682
THERMIONIC VALVE
John Foster, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 28, 1942, Serial No. 463,701
In Great Britain December 19, 1941
8 Claims. (Cl. 250—27.5)



1. An electron discharge device for use at ultra high frequencies comprising a cathode, a control grid, and an anode, a U-shaped metallic member having flat parallel limbs containing said cathode and grid spaced from the base thereof, a pair of metallic plates substantially in the planes of said limbs and spaced in the direction of electron flow from said limbs forming a first gap between said plates and limbs and spaced from said anode forming a second gap between said plates and anode, and a metallic disc sealed into the wall of the device and forming part of a hollow resonator, said disc being positioned between said first and second gaps and having an aperture therein to allow of the passage of the electron stream therethrough.

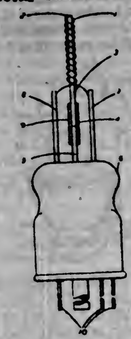
2,462,683
FILM HANDLING APPARATUS AND MAGAZINE FOR USE THEREWITH
Warren Dunham Foster, Eustis, Fla.
Application May 18, 1944, Serial No. 536,128
111 Claims. (Cl. 88—16.4)



10. In a magazine adapted for use with a film handling apparatus, said magazine including a substantially rectangular casing with a recess formed in an edge wall thereof, a film being housed within said casing and passing from a delivery coil within said casing through a first opening in an edge wall adjacent the upper edge of said recess and across said recess and to the interior of said casing through a second opening in said edge wall of said recess aligned with said first opening and adjacent the lower front edge of said recess, said edge wall of said recess being formed with such openings, a presser member, means for loosely supporting said presser member in said recess parallel to and adjacent the side of the film relatively distant from the front opening of said recess and between it and the back of said recess, and a leaf spring connected to said presser member and extending backwardly therefrom away from the film and toward the back of said recess for engagement with and compression by operating means disposed upon an apparatus with which the magazine is adapted to be employed, a side of said recess normal to the plane of said presser member being open for the reception of said operating means, said presser member being disposed inert and adjacent the plane of the film prior to the reception of said operating means.

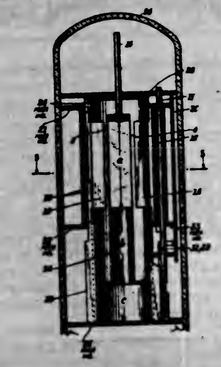
2,462,684
MOUNTING OF FILAMENTS IN VACUUM TUBES
Christopher Henry Foulkes, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application March 26, 1945, Serial No. 584,753
In Great Britain June 6, 1944
5 Claims. (Cl. 250—27.5)

2. A helical filament for an electric vacuum tube in the form of a multiple helix, fixed conducting supports, the ends of said filament being rigidly fixed to said conducting supports, an additional fixed conducting support having an open-ended socket, a metal conductor passing coaxially through said helical filament and having one end engaging said cylindrical socket, said filament being rigidly attached to said metal conductor, said metal conductor being secured in



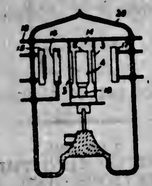
said socket in such position that said helical filament is substantially free from localized mechanical strain.

2,462,685
ULTRA HIGH FREQUENCY OSCILLATOR
John Heaver Fremlin, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application December 2, 1943, Serial No. 512,577
In Great Britain December 4, 1942
7 Claims. (Cl. 250—27.5)



1. An ultra-high frequency oscillator of the velocity modulation type comprising a source of an electron beam, means for controlling the mean velocity of the electrons in said beam, said source and said controlling means defining a beam path, a first cavity resonator provided with an aperture therethrough mounted about said beam path adjacent said source for velocity modulating electrons in said beam, a second cavity resonator provided with an aperture therethrough mounted about said beam path adjacent said first cavity resonator for collecting ultra-high frequency energy from the velocity modulated electrons, said cavity resonators both being provided with an open side, said cavity resonators being mounted with said open sides adjacent each other, and an antenna mounted on said resonators adjacent said open sides for capacitively loading said resonators, said antenna being less than a quarter wave length long at the highest operating frequency.

2,462,686
ELECTRON DISCHARGE DEVICE
John Heaver Fremlin and Stanley Gordon Tomlin, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 26, 1945, Serial No. 584,818
In Great Britain December 6, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 6, 1963
2 Claims. (Cl. 315—5)



2. A method of manufacturing an electric oscillation generator of the electron velocity modulation type adapted to generate oscillations of a given frequency which includes constructing a hollow resonator of the coaxial-line-type for the said generator adapted to resonate slightly above the given frequency, screwing a screw through the outer line of said resonator, locating fusible material in the neighborhood of the joint between the screw and the outer line, supplying oscillations at the given frequency to excite the resonator, connecting the resonator to a wave detector, adjusting the screw to vary the portion extending inside the resonator towards the interior line thereof until the detector indicates maximum excitation of the resonator, assembling the resonator in an enclosing envelope, and heating the resonator to melt the fusible material for the purpose of sealing the joint.

2,462,687
ELECTRON DISCHARGE DEVICE OF THE VELOCITY MODULATION TYPE
John Heaver Fremlin, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 13, 1945, Serial No. 588,207
In Great Britain April 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 19, 1963
14 Claims. (Cl. 315—5)

1. An electron discharge apparatus of the electron velocity modulated type comprising a cavity resonator having an entrance aperture and an exit aperture in the wall thereof, said apertures being in alignment on opposite sides of the axis of said resonator, means adjacent said entrance aperture for producing and projecting a beam of electrons through said apertures, means adjacent said exit aperture for reflecting said beam of electrons back into said cavity resonator after emergence of said beam of electrons from said exit aperture, means for producing a field intermediate said cavity resonator and said reflecting means, for deflecting said beam of electrons after emergence thereof from said exit aperture, and means for collecting said beam of reflected electrons, positioned inter-

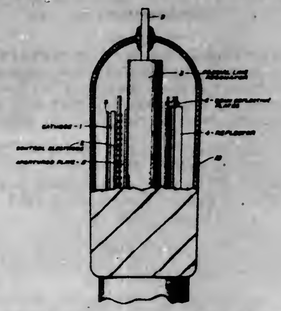
mediate said exit aperture and said means for producing and projecting said beam of electrons,

confined to a single side of said overarm that adjoins said standard thereby to offset said overarm completely in outboard relation to said high portion of the support standard for permitting unrestricted swinging movement of said overarm

and short parallel arms straddling the forearm and pivotally mounted thereto providing movement of the stock from a collapsed to an extended position and coacting means on each short parallel arm and the forearm to releasably retain the stock in the collapsed position, a hook-like

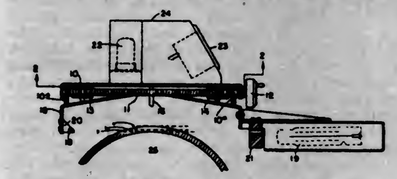
a signaling voltage superimposed upon said carrier voltage and adjusted at full load to be approximately equal thereto when impressed upon the resistance units while they are in the conducting condition, and means for also maintaining approximate equality of said voltages when impressed upon the resistance units while

mediate said exit aperture and said means for producing and projecting said beam of electrons,



which means are out of alignment with said apertures.

2,462,088
METHOD OF MEASURING THICKNESS OF CURVED SECTIONS AND APPARATUS THEREFOR
Herbert Friedman, Arlington, Va.
Application October 24, 1944, Serial No. 560,090
9 Claims. (Cl. 250—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



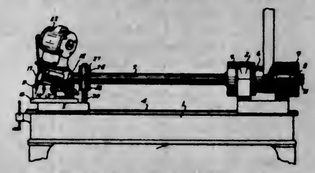
1. The method of measuring the thickness of curved sections of solid material by passing radiation into the curved surface in a direction to emerge through the same surface, comprising, arranging a source of radiation and a detector so that the received radiation is a narrow beam normal to a radius of curvature of the section, moving said radiation source and detector toward the section while maintaining the beam of radiation normal to a radius, detecting the beginning of decrease in intensity of received radiation at the detector and the beginning of its increase, the amount of motion of the source and detector between sharp changes of received radiation intensity being a measure of the thickness of the section.

2,462,089
CABINET CULINARY APPLIANCE
Marshall H. Frisbie, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application January 24, 1944, Serial No. 519,513
16 Claims. (Cl. 259—1)

1. In a collapsible household food mixing appliance the combination of, a support standard, an elongated rigid overarm, a driven rotor for detachably holding a food mixing tool and rotating the same at a free end of said overarm about an axis disposed crosswise the latter, a pivotal joint coupling the other end of said overarm to a high portion of said support standard, said joint being confined to a single side of said overarm that adjoins said standard thereby to offset said overarm completely in outboard relation to said high portion of the support standard for permitting unrestricted swinging movement of said overarm

relative to said standard between a horizontal working position and an idle position extending upward and a collapsed position extending downward in which latter position the length of said overarm flanks the length of said standard.

2,462,090
WOOL CUTTING MACHINE AND METHOD
Charles E. Galvin, Springfield, Ohio, assignor, by decree of distribution and assignment, to Reece M. Carey, Springfield, Ohio
Application August 3, 1940, Serial No. 350,170
19 Claims. (Cl. 29—4.5)

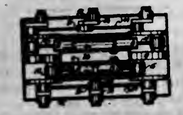


1. An apparatus for production of metallic wool, including means for mounting a length of thick, solid walled metallic tubing for rotary motion, and a rotary cutter eccentrically mounted in overlapping relation with a terminal face of the stock material and having traveling cutting engagement therewith at one side only of the axis of rotation of the stock, in a plane inclined to said axis, and means for differentially rotating the stock tubing and the cutter whereby the stock tubing rotates at a greater speed than the cutter, the arrangement being such that a plurality of parallel spiral cuts are simultaneously made upon a conical terminal face of the tubing.

2,462,091
COLLAPSIBLE STOCK FOR FIREARMS
John C. Garand, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War
Application June 3, 1946, Serial No. 674,005
3 Claims. (Cl. 42—72)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

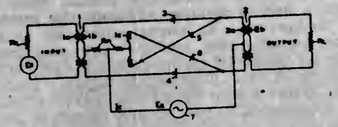
3. In a firearm having a forearm and a collapsible shoulder stock including a pair of long and short parallel arms straddling the forearm and pivotally mounted thereto providing movement of the stock from a collapsed to an extended position and coacting means on each short parallel arm and the forearm to releasably retain the stock in the collapsed position, a hook-like camming projection on the pivoted end of each long parallel arm, a ferrule secured to the rear end of the forearm, said ferrule having an arcuate slot disposed on one side thereof, a rotatable latch transversely mounted in said ferrule, said latch being provided with a cam ear on each end thereof, a lever-like member on one end of said latch above one of said ears, an inwardly facing lug on said lever adapted to engage said arcuate slot, and resilient means biasing said latch forwardly, all adapted and arranged whereby said hook-like camming projections are cammed past said ears rotating said latch rearwardly when the collapsible stock is swung from the collapsed to the extended portion and whereby said latch returns to the original position under the bias of said resilient means rotating said ears beneath said hook-like camming projections to positively lock the collapsible stock in an extended position relative to the forearm.

2,462,092
OPPOSED PISTON ENGINE
Gustav R. Gehrandt, Evanston, Ill.
Application January 26, 1945, Serial No. 574,713
28 Claims. (Cl. 123—51)



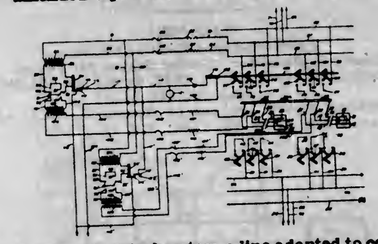
1. In an opposed piston engine, a pair of laterally spaced crankshafts, an engine cylinder intermediate the shafts, opposed pistons operating in the cylinder, means connecting the pistons with the respective proximate shaft, power take-off from said shafts, connecting means between said shafts, and additional power take-off means from said connecting means, intermediate said shafts, the said connecting means embodying a connecting rod, and the said additional power take-off means embodying a crankshaft to which said rod is connected.

2,462,093
MODULATOR
Edgar S. Grimes, Ridgewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application September 22, 1945, Serial No. 617,993
22 Claims. (Cl. 179—171.5)



1. A modulator of the reversing switch type comprising at least two pairs of oppositely poled variable resistance units adapted to be rendered cyclically conductive and non-conductive in pairs in alternating sequence by the positive and negative half waves of an applied carrier voltage, means for applying said carrier voltage to said modulator, means for applying to said modulator a signaling voltage superimposed upon said carrier voltage and adjusted at full load to be approximately equal thereto when impressed upon the resistance units while they are in the conducting condition, and means for also maintaining approximate equality of said voltages when impressed upon the resistance units while they are in the non-conducting condition.

2,462,094
ELECTRICAL SAFETY INTERLOCKING SYSTEM
James B. Grover, New York, N. Y.
Application June 30, 1945, Serial No. 602,632
7 Claims. (Cl. 171—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. In an electrical system, a line adapted to connect a power source and a load, circuit breaking means in said line adapted to be disposed in open-circuit or closed-circuit relation, and a by-pass circuit connected across the circuit breaking means including a first transformer and a second transformer, the primary winding of the first transformer being connected to the power source part of the line, the primary winding of the second transformer being connected to the load part of the line, the secondary windings of the transformers being connected in series in opposed relation, a second line adapted to connect a second source of power with an electromagnetic device for retaining the circuit-breaking means in open circuit relation upon flow of current in the second line, a switch in the second line, and a relay responsive to flow of current in the by-pass circuit during existence of a short circuit condition at the load for closing the switch in the second line to permit flow of current in the second line.

2,462,095
RATE CIRCUITS
Percy Halpert, Kew Gardens, and Carl A. Frische and John L. Bird, Lake Success, and Oriand E. Esval, Huntington, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Original application August 19, 1941, Serial No. 407,460. Divided and this application June 27, 1942, Serial No. 448,794
6 Claims. (Cl. 178—44)

1. In a rate circuit comprising a source of first signal votage, a first differentiating means for producing a second signal voltage corresponding to a time derivative of said first signal voltage, said differentiating means including an adjustable resistance element connected to provide said second signal voltage thereacross, a second differentiating means connected with said resistance element for producing from second signal voltage a third signal voltage corresponding to a time derivative of said second signal voltage, said second differentiating means including an element having resistance across which said third

signal voltage is produced, and variable resistance means for supplying a component of said

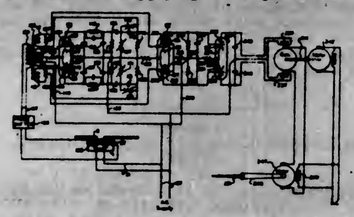
the driving means to maintain, through one range of pressure of elastic fluid supplied to the compressor, a substantially constant gauge pressure of the elastic fluid delivered by the compressor relative to the supply pressure, and means for

---

2,462,099
ROCKET PROJECTILE
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application May 15, 1946, Serial No. 669,786
2 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as

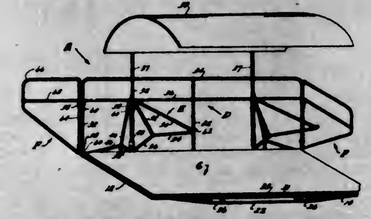
control pulse and the signal pulse to produce a pulse having a relatively steep wave front, current-control means responsive to the timed leading edge of the control pulse for initiating the flow of current and responsive to the steep pulse for halting the flow of current, whereby the resultant output pulse from said current-control means varies in duration in accordance with the

signal voltage is produced, and variable resistance means for supplying a component of said



second signal voltage to said last mentioned element.

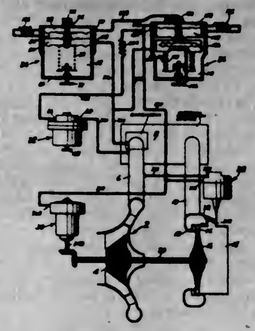
2,462,096
LITTER LOADING DEVICE
Harry S. Hamilton, United States Air Forces
Application November 7, 1947, Serial No. 784,640
4 Claims. (Cl. 248—120)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A litter loading device which comprises, in combination, a tubular floor supporting frame, a floor fast on said frame, transverse box girders secured to the underside of said floor supporting frame for receiving the fork of a fork lift, locking screws for securing said girders on to said fork, a back structure of welded together tubing extending upwardly from the rear of said floor supporting structure at right angles thereto, bracing between said floor supporting structure and said back structure, a pair of tubular litter supporting brackets hinged to said back structure set in from the ends of said back structure, a pair of end gates hinged to said back structure at the ends thereof, whereby said gates and said brackets may be swung from their normal plane which is at right angles to the plane of said back structure to a plane which is substantially parallel to the plane of the back structure, locking means on said gates and said brackets for retaining them in their normal plane, and a canopy supported on posts extending upwardly from said back structure only.

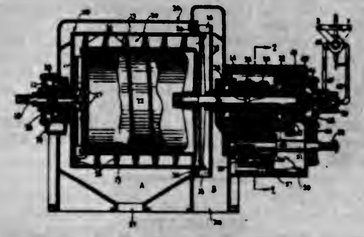
2,462,097
CONTROL SYSTEM
Winfield R. Heinz, Bound Brook, and Arthur E. Kittredge, Audubon, N. J., and John G. Williams, Philadelphia, Pa.; said Williams assignor, by mesne assignments, to Turbo Engineering Corporation, a corporation of Delaware, and said Heinz and Kittredge assignors, by mesne assignments, to Penn Industrial Instrument Corporation, a corporation of Pennsylvania
Application April 6, 1944, Serial No. 529,764
15 Claims. (Cl. 230—5)

1. In combination, a compressor, means for driving the compressor, and means for controlling the driving means to maintain, through one range of pressure of elastic fluid supplied to the compressor, a substantially constant gauge pressure of the elastic fluid delivered by the compressor relative to the supply pressure, and means for



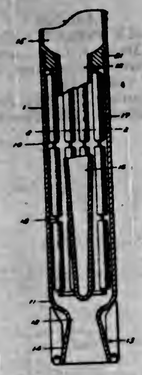
controlling the driving means to maintain, through another range of pressure of the elastic fluid supplied to the compressor, a substantially constant absolute pressure of the elastic fluid delivered by the compressor.

2,462,098
CONTINUOUS CENTRIFUGAL MACHINE
Joseph Hertrich, Hamilton, Ohio, assignor to The Western States Machine Company, Hamilton, Ohio, a corporation of Utah
Application January 7, 1944, Serial No. 517,309
17 Claims. (Cl. 210—69)



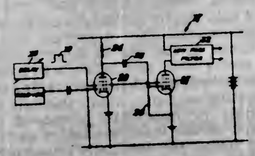
1. In combination, a centrifugal basket having a substantially cylindrical wall to hold material for centrifugal treatment, means to rotate the basket, a rotary feed screw coaxial with and having a helical member adjacent the inside of said basket wall to engage material therein, means for charging material into the basket, means for relatively reciprocating the basket and the screw in axial direction to advance material in the basket a step therealong on one stroke of each reciprocation, periodically operative means for relatively rotating the basket and the screw to unscrew said helical member with respect to such advanced material, said periodically operative means including means movable to interrupt said relative rotation during said one stroke and acting to cause said relative rotation during the other stroke of each reciprocation, and an outlet in the basket adjacent an end of said helical member for discharging centrifuged material.

2,462,099
ROCKET PROJECTILE
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application May 15, 1946, Serial No. 669,786
2 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



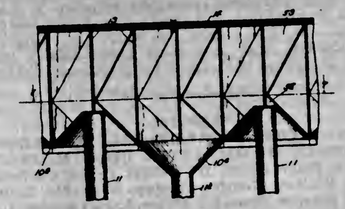
1. In a rocket, a nose section having an apertured rear wall, a tube forming a combustion chamber secured to said nose section over and about said aperture, and a burster tube secured within said aperture in fluid-tight relation with said nose section, said burster tube extending axially through said combustion chamber and having a cross sectional arear decreasing from said aperture to the rear end thereof.

2,462,100
DEMODULATOR SYSTEM FOR TIME MODULATED PULSES
Max G. Hollabaugh, Jackson Heights, N. Y., assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y., a corporation of Delaware
Application April 18, 1946, Serial No. 663,126
9 Claims. (Cl. 250—27)



1. A demodulator for time modulation pulse systems in which a signal pulse varies from a given time position according to its modulation, comprising a control pulse source producing pulses of constant duration, said duration being at least as great as the maximum range of time displacement of the signal pulses due to modulation, means for timing one of said control pulses substantially to coincide in time with a corresponding signal pulse so that the control pulse has a fixed time relationship to the unmodulated position of the signal pulse and covers the entire range of time displacement thereof, means responsive to the coincidence of the timed control pulse and the signal pulse to produce a pulse having a relatively steep wave front, current-control means responsive to the timed leading edge of the control pulse for initiating the flow of current and responsive to the steep pulse for halting the flow of current, whereby the resultant output pulse from said current-control means varies in duration in accordance with the time modulation of the signal pulse.

2,462,101
ELEVATED TANK
George T. Horton, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application September 28, 1944, Serial No. 556,153
7 Claims. (Cl. 220—1)



1. An elevated steel tank having a bottom comprising a central inverted truncated cone supported by a riser pipe at its truncated vertex, a plurality of upright cones intersecting with said inverted cone and with each other to form the bottom of the tank, side walls connected to the outer cones, and a roof connecting the side walls.

2,462,102
MODULATED REFLECTING-RESONANT TARGET
Edwin J. Istvan, Cleveland, Ohio
Application August 2, 1945, Serial No. 608,568
11 Claims. (Cl. 343—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A target unit for aerial operation comprising in combination, aerial means for carrying the unit through the atmosphere, an antenna for reflecting and retransmitting signals of predetermined wave length from an external source, means carried by said aerial means for supporting the antenna and coupling and uncoupling said antenna periodically in such a manner as to vary the reflection of said signals in a predetermined manner.

2,462,103
PREPARATION OF ALPHA-KETO-DIHYDRONAPHTHALENE
Robert Johnson, Verona, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application March 23, 1946,

trolled ratio, the ratio being at least one atom of primary impurity for each atom of secondary impurity, the amount of a secondary impurity being at least approximately $\frac{1}{10}$% by weight of the phosphate, the amount of primary impurity being equivalent to potassium .350% to 1.000%,

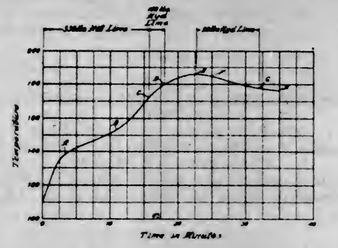
2,462,106
ELECTRIC TRANSFORMER
Walter Kram, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 26, 1946, Serial No. 665,047

2,462,109
SYNCHRONIZED PULSE GENERATOR
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 15, 1944, Serial No. 526,605
In Great Britain April 28, 1943

2,462,103
PREPARATION OF ALPHA-KETO-DIHYDRONAPHTHALENE
Robert Johnson, Verona, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application March 23, 1946, Serial No. 656,782
11 Claims. (Cl. 260—590)

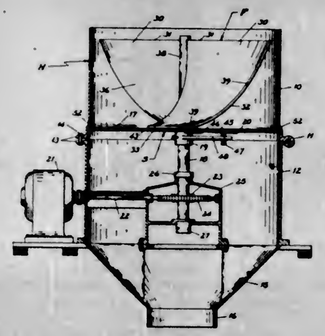
1. A process for the synthesis of alpha tetralone from tetralin, the steps comprising: oxidizing tetralin in liquid phase with oxygen containing gas to a controlled degree whereby the oxidation product includes a major proportion of tetralin peroxide; decomposing the oxidation product by addition thereto of aqueous solution of a copper salt of a mineral acid; settling the mixture and decanting therefrom decomposition product comprising tetralin and alpha tetralone; separating the alpha tetralone from the tetralin by fractional distillation; and converting alpha tetralol present in the alpha tetralone to dihydronaphthalene and separating substantially pure alpha tetralone therefrom by fractional distillation.

2,462,104
MANUFACTURE OF CRYSTALLINE ANHYDROUS MONOCALCIUM PHOSPHATE
William Hugh Knox, Jr., Robert Taylor Cochran, and William Remfry Crudup, Nashville, Tenn., and Warren Standish Miller, Lake Charles, La., assignors to Victor Chemical Works, a corporation of Illinois
Application September 15, 1943, Serial No. 502,474
6 Claims. (Cl. 23—109)



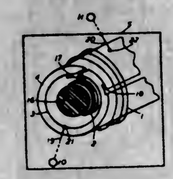
1. The method of forming crystalline anhydrous monocalcium phosphate substantially free from pyrophosphate which comprises reacting hot highly concentrated orthophosphoric acid with lime, the lime being added in the form of quick lime at such a rate as rapidly to produce a temperature of approximately 153° C. and until the mixture is less than semi-fluid, then adding quick lime at a reduced rate sufficient to produce a temperature of about 172° C. before a neutralizing quantity of lime has been added, then completing neutralization with hydrated lime at such a rate as to produce a peak temperature in excess of 180° C., and then adding an additional quantity of hydrated lime at a slower rate, the total lime being sufficient to produce a neutralizing value less than 95 and above 80, and introducing into the above mass a selected primary and secondary impurity, the primary impurity being selected from the group consisting of sodium, potassium, lithium, ammonium, and zinc, and the secondary impurity being selected from the group consisting of aluminum, tin, rion, cadmium and boron in controlled ratio, the ratio being at least one atom of primary impurity for each atom of secondary impurity, the amount of a secondary impurity being at least approximately $\frac{1}{10}$% by weight of the phosphate, the amount of primary impurity being equivalent to potassium .350% to 1.000%, sodium .206% to .590%, ammonium .154% to .437%, lithium .063% to .180%, and zinc .580% to 1.660%.

2,462,105
ROTARY POTATO SLICER
Silas M. Kobey, Denver, Colo., assignor to Potato Chip Equipment Corporation, Denver, Colo., a corporation of Colorado
Application December 17, 1945, Serial No. 635,463
6 Claims. (Cl. 146—124)



1. In a machine for slicing potatoes or the like, the combination of a cylindrical housing mounted vertically and having an upper cylindrical section pivotally attached to a lower cylindrical section, and also having an inverted conical section beneath said lower section adapted to act as a collecting spout; a generally horizontal, rotatable disc having oppositely disposed horizontal sectors of limited radial extent, and sloping sectors extending between said horizontal sectors, said sloping sectors being inclined downwardly in a direction opposite to the direction of rotation of said disc, said housing being provided with an inwardly extending ledge around and just above said disc and said upper housing section extending to just below said disc; a pivotal sector attached by a hinge or the like to the remainder of each sloping sector and forming a portion thereof, said pivotal sectors being of limited radial extent; means for rotating said disc about the axis of said housing; a pair of oppositely disposed slicing blades mounted on the leading edge of each horizontal sector; means for vertically adjusting each said pivotal sector; and means for feeding potatoes or the like to said slicing means, including equally spaced radial wings forming compartments above said slicing means, each said wing converging toward said disc so as to form a restricted space above said disc of decreasing height in the direction of rotation of said disc, the angle of the rear surface of each wing to said plane decreasing toward the periphery thereof, each said wing being relatively thick adjacent the inside thereof to provide a lesser slope of the forward surface thereat than of the rear surface, and the outer edge of each wing conforming to said housing.

2,462,106
ELECTRIC TRANSFORMER
Walter Kram, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 26, 1946, Serial No. 665,047
In Great Britain April 27, 1945
7 Claims. (Cl. 178—44)



1. A double screened electrical transformer comprising a substantially cylindrical core, a secondary winding on the said core, a substantially cylindrical inner screen surrounding the secondary winding, a susbtantially cylindrical outer screen surrounding the inner screen, each screen having a narrow gap therein running parallel to the axis of the core, a primary winding over the outer screen and a connecting lead tapped off at a point on each screen, the said tapping points being so chosen that the undesired difference of the potentials of the said points resulting from the electromotive forces induced to the screens by alternating currents in the windings is brought within a specified limit, means for deriving from the alternating flux in the core of the transformer a potential difference acting between the screens to oppose the said undesired difference of potential, and means for adjusting the resultant potential difference substantially to zero.

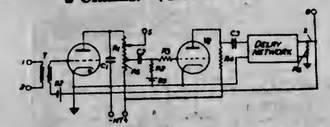
2,462,107
PROCESS FOR PREPARATION OF DIACETYL
Theodore Kritchevsky, Chicago, Ill., assignor to Ninol Development Co., Chicago, Ill.
No Drawing. Application May 3, 1943, Serial No. 485,514
9 Claims. (Cl. 260—596)

1. In a method of preparing diacetyl, the step which comprises contacting 2,3-butanediol in the vapor phase with a dehydrogenating catalyst at dehydrogenating temperatures in the substantial absence of oxygen.

2,462,108
WARP SIZING MATERIAL
Fred G. La Piana, Providence, R. I., assignor to Stein, Hall & Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application July 25, 1945, Serial No. 607,088
6 Claims. (Cl. 106—210)

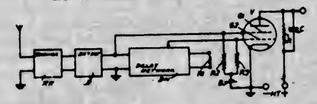
1. A composition comprising as its primary and essential components, from about 40 to 70 per cent of a starch selected from the group consisting of corn and wheat starches and from about 60 to 30 per cent of waxy maize starch, said composition being characterized by giving cooked aqueous dispersions which are substantially non-gelling at room temperature and being adapted for providing a flexible, tough and abrasion resistant warp sizing.

2,462,109
SYNCHRONIZED PULSE GENERATOR
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 15, 1944, Serial No. 526,605
In Great Britain April 28, 1943
3 Claims. (Cl. 250—36)



1. A circuit for generating periodic electric waves of sawtooth form and for synchronizing them in a submultiple of the frequency of a controlling wave comprising a relaxation oscillator for generating said sawtooth waves, a pulse generator for converting the waves into unidirectional synchronizing pulses at the submultiple frequency, a delay network connecting the pulse generator to the oscillator for applying the pulses thereto and means for applying said controlling wave to said oscillator simultaneously with said pulses.

2,462,110
DEMODULATION OF TIME-MODULATED ELECTRICAL PULSES
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 30, 1944, Serial No. 538,062
In Great Britain June 1, 1943
13 Claims. (Cl. 250—27)



1. A source of a train of short phase-modulated electrical pulses of substantially constant duration and an arrangement for demodulating said phase modulated train of short electrical pulses comprising delay means for obtaining from the said train a delayed train of which each pulse overlaps in time the following pulse of the original train, the delay being of a value differing from the unmodulated time spacing of the pulses of said train by a predetermined amount, means for combining each pair of overlapping pulses thus producing a train of pulses whose durations vary in accordance with the modulating signal wave, and means for extracting the said signal wave from the derived train of pulses.

2,462,111
MULTICHANNEL PULSE DISTRIBUTOR SYSTEM
Maurice Moise Levy, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 2, 1945, Serial No. 602,883
In Great Britain May 26, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 26, 1964
4 Claims. (Cl. 179—15)

1. In a multi-channel electrical communication system in which the intelligence wave of each

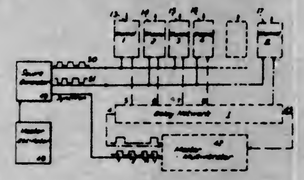
channel is transmitted as a modulation of a series of electrical pulses, a distributor system comprising a delay network, means associated therewith to provide timed phase pulses for rendering the channels cyclically and successively operative, means for applying to the respective channel

2,462,113
WAX INJECTION APPARATUS
Samuel Lipsen, Hyman Rosenthal, and Harold Marinus, Philadelphia, Pa.
Application January 11, 1946, Serial No. 640,629
2 Claims. (Cl. 18—30)

adapted to be elevated by the firing pin on forward movement thereof, resilient means adapted to depress the sear whereby said cam surfaces will interengage, a generally rectangular sear slide having end portions reversibly mounted in the bolt in rear of said sear and slidable through the

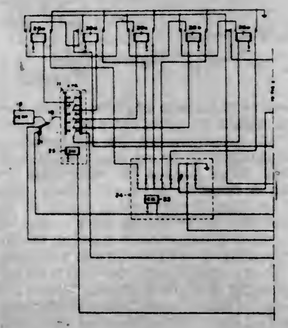
2,462,116
LEAK TESTING FIXTURE FOR VALVES
Angus MacLachlan, New York, N. Y.
Application May 28, 1946, Serial No. 672,903
1 Claim. (Cl. 73—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

channel is transmitted as a modulation of a series of electrical pulses, a distributor system comprising a delay network, means associated therewith to provide timed phase pulses for rendering the channels cyclically and successively operative, means for applying to the respective channel equipments auxiliary electrical pulses of rectangular wave form whose durations define the



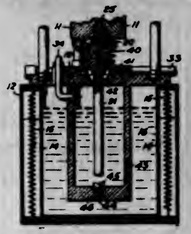
channel periods, said auxiliary pulses having a repetition frequency equal to the number of channels fed in parallel multiplied by the distributor frequency, said channel equipments being arranged so as to be operated only when a distributor selector pulse and an auxiliary electrical pulse occur together at said channel equipments.

2,462,112
TELEGRAPH SYSTEM
George G. Light, Alexandria, Va., and Russell E. Hanford, Forest Hills, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application March 10, 1945, Serial No. 582,020
5 Claims. (Cl. 178—4)



1. In a telegraph system, a normally closed transmitting circuit, a tape transmitter for transmitting to said circuit, a perforated tape having messages stored therein for controlling said transmitter with said messages separated by predetermined perforations, means controlled by any character perforation in said tape on the advancement thereof into said transmitter following passage of said predetermined message separating perforations therethrough to open said transmitting circuit for a predetermined length of time and means to prevent operation of said transmitter during said open circuit condition and to automatically start operation of the same at the end of said open circuit condition.

2,462,113
WAX INJECTION APPARATUS
Samuel Lipson, Hyman Rosenthal, and Harold Markus, Philadelphia, Pa.
Application January 11, 1946, Serial No. 640,629
2 Claims. (Cl. 18—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

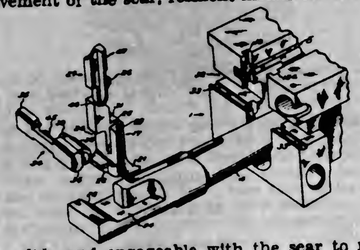


1. In an injection apparatus for making models of an object to be precision cast, the combination of a substantially closed container having a bottom, side walls and top and further having in the container top an opening which normally is open to the outside atmosphere, means for charging said container with a quantity of a suitable casting material, heating means in proximity to said container for melting said casting material, a valve seat in the uppermost portion of the opening in said container's top, a valve comprised of an upper nozzle-like body portion which protrudes above and mates with said valve seat and of a lower stem portion which extends from the body portion down through the container's top to a point beneath the level of said casting material therein, said valve having a channel which axially extends entirely therethrough from the uppermost end of the body portion to the lowermost end of the stem portion, a valve seat which forms the uppermost end of the said container top opening and which coacts with said valve's body portion to close and seal said opening whenever downward pressure is applied to said valve, a mold cavitied with the desired object pattern and having a cavity inlet at the mold bottom, means for connecting said inlet with said valve's nozzle portion and for exerting downward pressure to force the valve to mate with said valve seat and close the said container top opening, and means thereafter effective for introducing gas under pressure into the interior of said container whereby to force said molten casting material upwardly through said valve's stem and body portions and into said mold cavity and thereby fill same from the bottom in a way which expels all cavity air from the mold ahead of the rising casting material.

2,462,114
SEAR RELEASE MECHANISM
John L. Lochhead, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War
Application January 3, 1946, Serial No. 638,905
1 Claim. (Cl. 89—136)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

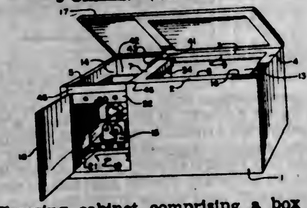
In a gun, a reciprocable breech bolt, a firing pin device provided with a cam surface adjacent its rear end and movable relative to the bolt, a vertically movable sear carried by the bolt and provided with a transverse slot across the rear face thereof and a lower cam surface complemental to the firing pin device cam surface and

adapted to be elevated by the firing pin on forward movement thereof, resilient means adapted to depress the sear whereby said cam surfaces will interengage, a generally rectangular sear slide having end portions reversibly mounted in the bolt in rear of said sear and slidable through the transverse slot thereof, a pair of oppositely disposed ribs on either end portion of said slide which mount the slide in the bolt and one of which ribs is engageable with the lower surface defining the slot in said sear to prevent upward movement of the sear, resilient means carried by



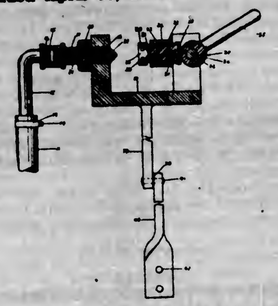
the slide and engageable with the sear to normally urge the slide into a position where said one rib will engage the sear to prevent upward movement, aforesaid, a downwardly inclined cam surface centrally provided on said slide, and a sear bar mounted on said bolt and sear for vertical movement and provided with a cam surface engageable with the cam surface on said slide operable upon downward movement of said bar to move said slide to a position where said one rib will be removed from the path of upward movement of the sear.

2,462,115
FREEZING CABINET WITH REFRIGERATING REMOVABLE UNIT
Harry F. Luecke, Herndon, Va.
Application June 10, 1946, Serial No. 675,743
5 Claims. (Cl. 62—116)



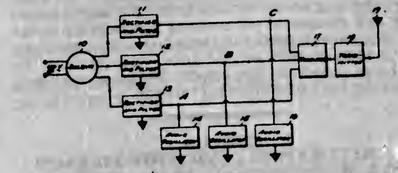
1. Freezing cabinet comprising a box having an open-topped freezing compartment and a compressor unit compartment having an opening through the front and also open at the top, a partition separating said compartments, the walls of said freezing compartment, including said partition, being heat insulated, a groove across said partition communicating with said compartments, freezing apparatus comprising a compressor unit removably contained in said compressor unit compartment, an evaporator removably contained in said freezing compartment, and flexible refrigerant connections between said compressor unit and said evaporator of such length as to permit sequential removal of said compressor unit and said evaporator from said cabinet without the necessity of breaking said connections, said connections passing through said groove, and a lid for said cabinet overlying said compartments and groove.

2,462,116
LEAK TESTING FIXTURE FOR VALVES
Angus MacLachlan, New York, N. Y.
Application May 28, 1946, Serial No. 672,903
1 Claim. (Cl. 73—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In valve testing apparatus, a fitting comprising a conical seat which fits a predetermined aperture of the valve, a plunger comprising an abutment head which fits the valve opposite the aperture, a frame supporting the fitting and supporting the plunger with its abutment head in opposed relationship to the seat, the frame comprising a guideway for movement of the plunger towards or away from the fitting, actuating mechanism including a cam operable to actuate the plunger towards the fitting and to hold the valve with the selected aperture thereof in seating engagement with the seat, a fluid passage through the fitting and extending through the seat in communication with the selected valve aperture, a base comprising a mounting for the frame enabling its movement relative to the base, the mounting comprising a connection controlling movement of the apparatus in a direction laterally and downwardly to a position laterally away from the base.

2,462,117
SELSYN TRANSMISSION BY RADIO
Ward C. Mikkelson and Jacob Anthes, United States Army
Application April 12, 1945, Serial No. 588,048
1 Claim. (Cl. 177—337)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A system for indicating at a remote point the angular position of the rotor of a self-synchronous generator having at least three fields comprising means for establishing three separate audio frequency voltages, means for rectifying the alternating current voltage output of each of the generator fields, means for combining each of said rectified voltages with the output of one of said audio frequency voltages, the amplitude of each of said resultant audio frequency voltages being

dependent upon the relative angular position of the generator rotor, means for combining said resultant audio frequency voltages to obtain a composite voltage wave, means for establishing a radio frequency carrier, a modulator for modulating said carrier with said composite voltage

and adapted to be secured therein, said lock-screw member being provided with an exterior annular groove having a gas port extending radially therethrough communicating with said bore, and an adjusting member having an axial hole therethrough rotatably and removably dis-

zontal base plate, a series of vertical radially arranged plates, each plate defining a miter joint plane of the elbow, a vertical arcuate plate joining the extremities of said plates, a second arcuate plate spaced from said first arcuate plate and concentric therewith, and a series of vertical

catayist dissolved in an organic non-complex forming solvent which is liquid at the reaction temperature to form a polymer, discharging said polymer into heated water containing a water-insoluble soap of a fatty acid having 16 to 18 carbon atoms per molecule and a metal selected from the group, consisting of magnesium, zinc,

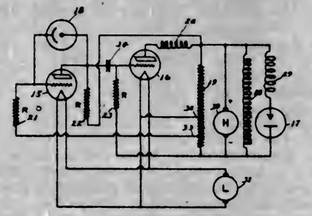
dependent upon the relative angular position of the generator rotor, means for combining said resultant audio frequency voltages to obtain a composite voltage wave, means for establishing a radio frequency carrier, a modulator for modulating said carrier with said composite voltage wave, means for transmitting said modulated carrier wave, means for receiving and demodulating said modulated carrier wave to obtain a composite oscillatory signal, means for separating said composite oscillatory signal into three separate audio frequency components, means for rectifying and filtering each of said three audio frequency components to obtain a direct current voltage, means for combining each of said direct current voltages with an oscillatory voltage of audio frequency to obtain a resultant oscillatory voltage, means for utilizing said three resultant oscillatory voltages to form three overlapping fields and means for giving indications in accordance with the resultant of said three overlapping fields.

2,462,118

TORPEDO EXPLODING MECHANISM

Chester T. Minkler, Newport, R. I.

Application December 6, 1932, Serial No. 646,019
22 Claims. (Cl. 114—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A torpedo exploding device, comprising a first thermionic tube, a second thermionic tube, the output of said first tube being operatively connected to the control electrode of said second tube, means for maintaining the proper differences of potential between the cathodes and anodes of said tubes, means for maintaining the proper bias on said first tube and for normally maintaining the control electrode of said second tube at such a potential with respect to the potential of its cathode and anode that relatively little current flows from the anode of said second tube, light responsive means connected between the grid and anode of said first tube and responsive to a change of intensity of light energy striking it to cause a relatively large flow of current from the anode of said second tube, and current responsive means in the anode circuit of said second tube for exploding said torpedo.

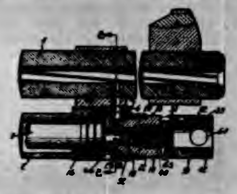
2,462,119

GAS REGULATING DEVICE FOR FIREARMS

Cyril A. Moore, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War

Application June 28, 1946, Serial No. 680,106
6 Claims. (Cl. 89—193)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A gas-regulator device for a gas-operated firearm comprising in combination, a cylindrical lock-screw member having a bore therethrough insertable in the gas-cylinder tube of the firearm and adapted to be secured therein, said lock-screw member being provided with an exterior annular groove having a gas port extending radially therethrough communicating with said bore, and an adjusting member having an axial hole therethrough rotatably and removably disposed within said bore of said lock-screw mem-



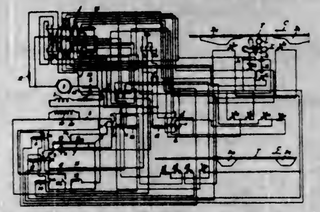
ber and including a rear shank portion which is provided with a series of ports therein communicating with said axial hole, all adapted and arranged whereby said adjusting member may be rotated so that said ports thereof may be selectively aligned with said gas port of said lock-screw member.

2,462,120

SPEED CONTROLLING MEANS FOR DIRECT CURRENT MOTORS

Georges Gabriel Mozzanini, La Garenne Colombes, and Maurice Lebertre, Neuilly-sur-Seine, France

Application April 11, 1945, Serial No. 587,712
In France December 15, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires December 15, 1961
6 Claims. (Cl. 318—259)



1. In combination with a movable part, a direct current motor adapted to drive said part, a power supply supplying armature current to said motor; means for rapidly decelerating said motor to a stop upon the failure of said power supply which includes: an auxiliary circuit adapted to connect the armature of said motor to its field winding; electrical control means adapted to establish said auxiliary circuit to effect connection of said armature to said field winding upon the failure of said power supply, and a reversing switch in said auxiliary circuit responsive to a direction of current in said motor armature and adapted to direct said motor armature current through said field in the decelerating direction regardless of the direction of said armature current.

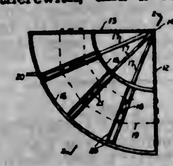
2,462,121

JIG FOR FORMING MITERED PIPE JOINTS

George Muhlack, Philadelphia, Pa.

Application March 5, 1946, Serial No. 652,205
3 Claims. (Cl. 113—102)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A jig for manufacturing a mitered pipe elbow comprising a framework including a horizontal base plate, a series of vertical radially arranged plates, each plate defining a miter joint plane of the elbow, a vertical arcuate plate joining the extremities of said plates, a second arcuate plate spaced from said first arcuate plate and concentric therewith, and a series of vertical



pairs of plates between said arcuate plates, each of said pairs of plates being in spaced relation with a miter-joint plane centrally therebetween, each pair of parallel spaced plates having aligned recesses in the upper edges thereof forming a cradle for adjacent mitered ends of the elbow joint.

2,462,122

METHOD OF CASTING, FORGING, AND HEAT-TREATING CAST IRON GRINDING BALLS

Manley R. Nelson, Denver, Colo., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo., a corporation of Colorado

No Drawing. Application May 2, 1944, Serial No. 533,803
4 Claims. (Cl. 148—12)

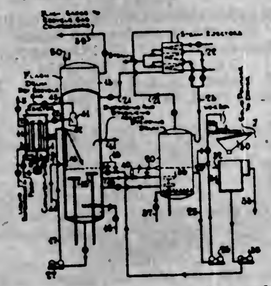
1. A method of producing a grinding ball which comprises pouring cupola melted iron into a mold, to produce a cast iron sphere having a pearlitic structure; permitting said sphere to cool in said mold; removing said sphere from said mold; heating said sphere to a hot forging temperature; hot forging said sphere to reduce the volume and increase the density while maintaining the spherical shape thereof; heating said sphere to an elevated temperature and quenching to harden the same; and tempering said sphere at a predetermined lower temperature to produce a predetermined toughness.

2,462,123

PROCESS FOR INCORPORATING ANTIOXIDANTS INTO SYNTHETIC RUBBERY ISOBUTYLENE POLYMERS

Joseph F. Nelson, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application August 14, 1945, Serial No. 610,839
12 Claims. (Cl. 260—93)



2. The process which comprises polymerizing isobutylene at a temperature between —40° C. and —160° C., in contact with a Friedel-Crafts catalyst dissolved in an organic non-complex forming solvent which is liquid at the reaction temperature to form a polymer, discharging said polymer into heated water containing a water-insoluble soap of a fatty acid having 16 to 18 carbon atoms per molecule and a metal selected from the group, consisting of magnesium, zinc, aluminum and calcium and further containing a suspension of a non-volatile anti-oxidant selected from the group consisting of aromatic amines, aminophenols and 2,4,6-trialkyl phenols in order to flash off the volatile reaction liquid and maintain the polymer in finely divided form, separating the polymer particles from the water, withdrawing the volatilized materials, subjecting the volatilized materials to a recovery treatment and recycling the recovered material to the polymerization.

2,462,124

MANUFACTURE OF AMINO ACIDS

Carl Neuberg and Hilda Lustig, New York, N. Y., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio

No Drawing. Application January 19, 1946, Serial No. 642,431
4 Claims. (Cl. 260—529)

1. The method of obtaining purified amino acids from an aqueous hydrolysate of proteinous matter which comprises adding to the aqueous hydrolysate a sulfate of a metal from the group consisting of copper and nickel and also adding an alkaline earth hydroxide, removing the precipitated solids, and converting the dissolved amino acid-metal compounds into free amino acids.

2,462,125

ELECTROPHORETIC COATING OF METAL ARTICLES

Lesley Francis Oakes, Alexandria, near Sydney, Australia, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application March 29, 1944, Serial No. 528,619. In Australia July 23, 1943
11 Claims. (Cl. 204—181)

1. In a process for coating a metal article with an inorganic refractory substance by electrophoresis; the step that comprises making the article the anode of two electrodes in a bath having substantially the following composition expressed in proportions based on weight:

	Parts
An organic liquid of the class consisting of acetone and methanol	100
Inorganic refractory substance	3 to 20
A dispersive agent	0.3 to 1

said dispersive agent being a mixture consisting of an alkylolamine and nitrocellulose each constituting at least 5% by weight of the said dispersive agent.

2,462,126

LATHE ATTACHMENT

Thomas D. Peat, New York, N. Y.

Application September 7, 1945, Serial No. 615,066
4 Claims. (Cl. 82—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a lathe having a taper attachment including an angle base, table and connecting slide; a contour-duplicating attachment comprising a template detachably secured to said table, roller means adjustably secured to said connecting slide for following said template,

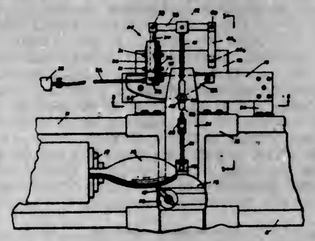
a compressed-air chamber having a plunger and stem mounted upon said base, a support mounted upon said base, a crossarm rotatably secured at one end to said plunger stem and at the other

opposite grid laterally inclined in the opposite direction, and extending along a portion of said first movable grid; a second longitudinally movable grid also inclined laterally oppositely to said first movable grid and extending from said stationary grid to a point beyond the end of said

alternatively for semi-automatic and full automatic fire, said mechanism comprising a trigger housing, a trigger pivoted in said housing, a hammer pivoted in said housing, a sear pivoted in said trigger for holding said hammer cocked, a slidable bolt having a firing pin therein, and an operating slide for sliding said bolt, reciprocable

respective rows for moving the typewheel different distances so that one or the other row is in printing position, depending upon which lever is actuated, means for selectively determining which

a compressed-air chamber having a plunger and stem mounted upon said base, a support mounted upon said base, a crossarm rotatably secured at one end to said plunger stem and at the other



end to said support, and a connecting member rotatably secured to said crossarm and to said connecting slide and responsive to the air pressure in said air chamber yieldably to hold said roller means against said template.

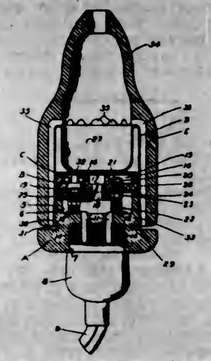
2,462,127
MEANS FOR ELECTRICALLY CONNECTING WIRES TO TERMINALS
John Richard Pheasey and Robert James Maddock Andrews, London, England, assignors to International Standard Electric Corporation, New York, N. Y.
Application October 22, 1946, Serial No. 704,976
In Great Britain September 20, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 20, 1965
2 Claims. (Cl. 173—324)

1. A wire connector comprising a tubular member having means for mounting one end thereof on a base, said member having its opposite end disposed at an angle with respect to said mounting end, said member being provided with an aperture disposed on the outside of the angle and adjacent said mounting end, whereby a plurality of electrical wires may be inserted through an end of said member and through the aperture of said member together with the solder for producing a soldered joint among said wires and said member.

2,462,128
BEET HARVESTING MEANS
David J. Reach, Avery A. Clark, and George W. Rienks, Denver, Colo., assignors to The Great Western Sugar Company, Denver, Colo., a corporation of New Jersey
Application April 25, 1944, Serial No. 532,594
20 Claims. (Cl. 55—108)

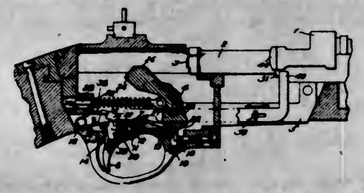
1. Mechanism of the character described, comprising a first longitudinally movable grid laterally inclined to the vertical; a relatively stationary opposite grid laterally inclined in the opposite direction, and extending along a portion of said first movable grid; a second longitudinally movable grid also inclined laterally oppositely to said first movable grid and extending from said stationary grid to a point beyond the end of said first movable grid; and spiking means associated with said second movable grid for impaling beets and moving the same to a point adjacent the end of said second movable grid.

2,462,129
ELECTRIC VAPORIZER
Joseph Robinson, New York, N. Y.
Application November 1, 1946, Serial No. 707,289
3 Claims. (Cl. 128—192)



1. An electric vaporizer comprising in combination, a base having an opening therein, a wall across said opening, terminal means extending through said wall, an electric plug removably engageable with said terminal means below said wall, said plug serving as a switch for opening and closing the electric circuit, a heater mounted on said base and provided with contact means having circuit engagement with said terminal means, a container housing said heater and a portion of said base, said container being anchored to said base to tie the parts in the assembled position with said heater contact means and said terminal means in circuit engagement, and a cover covering said container to insulate the container and to direct the vapors to the nasal passages.

2,462,130
AUTOMATIC MECHANISM FOR CARBINES
Ross Rudd, Springfield, Mass.
Application February 27, 1947, Serial No. 731,199
3 Claims. (Cl. 89—141)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an attachment for the firing mechanism of a gun whereby said mechanism can be operated

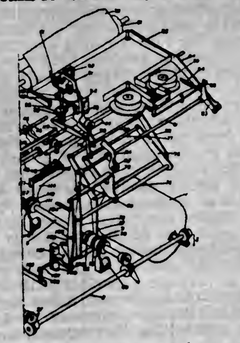
alternatively for semi-automatic and full automatic fire, said mechanism comprising a trigger housing, a trigger pivoted in said housing, a hammer pivoted in said housing, a sear pivoted in said trigger for holding said hammer cocked, a slidable bolt having a firing pin therein, and an operating slide for sliding said bolt, reciprocable on recoil and counter-recoil, the combination of a cam plate pivoted in said housing and having a cam shoulder and an upstanding head; a trigger bar slidably mounted on said housing, having an operating finger on its rear end and a post on its forward end, and spring-biased rearwardly; and a stud adjustably mounted in said operating slide for operative and inoperative positions to condition the mechanism for full automatic and semi-automatic fire, respectively, the parts being so related that the hammer is cocked by the bolt on recoil of said slide, and when said stud is adjusted to inoperative position, for semi-automatic fire, the cocked hammer is released to impinge against said firing pin by releasing the sear by squeezing the trigger, and that, when said stud is adjusted to operative position for full automatic fire, on counter-recoil of said slide the stud contacts said post, sliding said bar forwardly, the forwardly moving finger of said bar, contacting said head of said cam plate, rocks said plate, said cam shoulder of the plate rocks the sear, and said hammer is released to impinge against said firing pin.

2,462,131
SOLDERING IRON
Eugene H. Eustin, Brooklyn, N. Y.
Application October 14, 1942, Serial No. 461,979
2 Claims. (Cl. 113—109)

1. A soldering iron comprising a head having a bore extending therethrough, a shank extending laterally from the head and provided with a bore extending longitudinally therethrough, a nozzle extending through the bore of the head and provided with a convex lower end, the nozzle being provided with a comparatively narrow elongated passage extending axially therethrough with its upper end open to the atmosphere and having its upper portion of greater diameter than its lower portion, said passage being adapted, when the nozzle is heated and its lower end is dipped in molten solder, to draw the solder therein by capillary attraction, and means removably securing the nozzle to the head, said shank providing means through the medium of which the nozzle may be manipulated and providing means for conducting heat to the nozzle.

2,462,132
TYPE WHEEL POSITIONING MECHANISM FOR PRINTING TELEGRAPH APPARATUS
Reginald Dennis Salmon, Croydon, England, assignor to Creed and Company Limited, Croydon, England, a British company
Application January 11, 1945, Serial No. 572,344
In Great Britain January 15, 1944
15 Claims. (Cl. 197—53)

14. Printing telegraph receiver comprising a typewheel having the type thereon arranged in two rows, means for rotating the typewheel selectively, means including a cam and two levers having different effects and corresponding to the respective rows for moving the typewheel different distances so that one or the other row is in printing position, depending upon which lever is actuated, means for selectively determining which

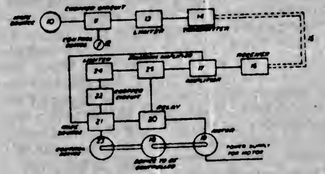


of said two levers is to be actuated on each rotation of said cam, means effective for each character received to rotate said cam, and means for printing from a row of type on said typewheel when said row is in printing position.

2,462,133
PROCESS OF TREATING PREGNENE COMPOUNDS
Lewis H. Sarett, Princeton, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Original application July 14, 1945, Serial No. 605,194. Divided and this application February 23, 1946, Serial No. 649,768
4 Claims. (Cl. 260—397.3)

1. The process that comprises partially esterifying $\Delta^{4,5}$-3,11-diketo-17,20,21-trihydroxypregnene by reaction with substantially the theoretical quantity of an acylating agent required to esterify one hydroxyl group, reacting the resultant ester with an oxidizing agent, and recovering a mixture containing $\Delta^{4,5}$-3,11,20-triketo-17-hydroxy-21-acyloxypregnene and $\Delta^{4,5}$-3,11,17-triketoandrostene.

2,462,134
REMOTE CONTROL ARRANGEMENT
Charles Thomas Scully, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 14, 1942, Serial No. 462,024
In Great Britain September 30, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 30, 1961
9 Claims. (Cl. 318—18)



1. An electrical remote control system, comprising first and second stations and a transmitting medium extending therebetween, means

at said first station for generating electrical pulses time modulated in accordance with the control to be effected at the second station, comprising a source of oscillations of given frequency, an electron discharge device having a grid, means

2,462,136
HEAT EXCHANGER AND METHOD OF MAKING SAME
Samuel H. Smith, Bucyrus, Ohio
Application May 24, 1945, Serial No. 595,502

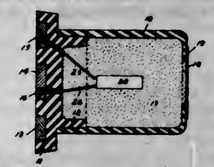
facing one of said open ends, an electron-reflecting electrode facing the other of said open ends, and means adjacent said source of electrons for shielding the surfaces of the anode arms from electrons emitted from said source.

---

inder of substantially uniform wall thickness and having a bore which provides said working surface, said inner cylinder being continuous and imperforate in at least the zone of sliding contact, a cuprous blanket surrounding the inner cylinder in a substantially uninterrupted manner, and an intermediate layer, the intermediate layer

at said first station for generating electrical pulses time modulated in accordance with the control to be effected at the second station, comprising a source of oscillations of given frequency, an electron discharge device having a grid, means for coupling said source of oscillations to said grid, means for biassing said grid for operation only in response to positive half waves from said source, said coupling means including a capacitor adjustable in accordance with the remote control to be effected, at the second station an electric motor for effecting the desired control, means for receiving from the transmitting medium the time modulated pulses, a source of locally generated pulses with synchronizing connection to the time modulated pulses received to have a repetitive rate at said given frequency, means for modulating said locally generated pulses in accordance with the condition of the apparatus to be controlled, said modulating means being similar to the modulating means at the first station and including a variable capacitor with means connecting the same to the controlled device, means for comparing the received modulated pulses and means for controlling thereby said motor.

2,462,135
ROCKET PRIMER
Leslie A. Skinner, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application April 6, 1944, Serial No. 529,763
3 Claims. (Cl. 102—70.2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

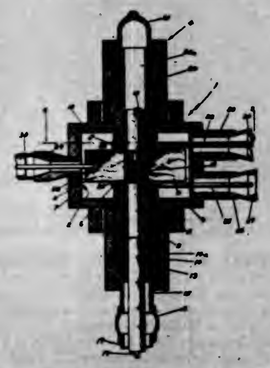


1. An electrical igniter adapted to be inserted in the nozzle opening of a rocket projectile and adapted to establish electrical contact with the pair of electrical switches provided in the rocket launcher, comprising, in combination, a plastic cup provided with internal threads at its mouth and with a centrally located hole in its bottom, a plastic circular plate provided with an annular flange externally threaded for screwing into the said threaded mouth of the cup, a cloth disc somewhat larger than the said cup hole and adapted to be shellac-adhered to the outside of the cup to close the said hole, an outer metal ring and an inner metal disc moulded in the said plastic plate with their exposed surfaces flush with the outer face of the plastic plate to furnish a pair of electrical contacts, the said plastic plate having a pair of drilled holes, one drill hole passing through the said outer ring and the other drill hole passing through the said inner disc, an electrically-fired primer positioned within the said plastic cup with its two lead wires soldered in the two said drilled holes, the edge of the said plastic plate being beveled to the taper of the said rocket nozzle and adapted to be press fitted in the nozzle, the said cup being received within the expansion nozzle of the rocket projectile with the said outer ring and inner disc positioned at the said rocket nozzle to be contacted by the said pair of electrical switches of the launcher irrespective of the angular position of either the electrical igniter or the rocket projectile.

2,462,136
HEAT EXCHANGER AND METHOD OF MAKING SAME
Samuel H. Smith, Bucyrus, Ohio
Application May 24, 1945, Serial No. 595,502
10 Claims. (Cl. 257—130)

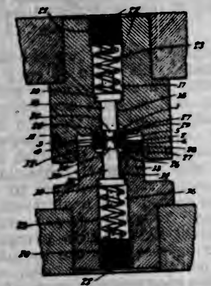
1. The method of making heat exchangers comprising the steps of making a plurality of elongated parallel slits in the central part of a piece of thin, flat metal, thereby forming a plurality of strips connected at their ends to the marginal portion of the piece of metal, turning said strips alternately in opposite directions through approximately right angles about their longitudinal center lines for approximately their full lengths and thereby bringing the side surfaces of each strip opposite to surfaces of adjacent strips which were originally parts of the same surface of the metal piece, assembling in each opening defined by a pair of such adjacent, turned strips an elongated hollow member which comprises a plurality of spaced parallel flat tubes and approximately fills said opening, and connecting said tubes and the adjacent strips and filling the spaces therebetween by bringing molten metal into said spaces.

2,462,137
ELECTRON DISCHARGE DEVICE
William V. Smith, Medford, Mass, assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 26, 1946, Serial No. 650,358
6 Claims. (Cl. 250—27.5)



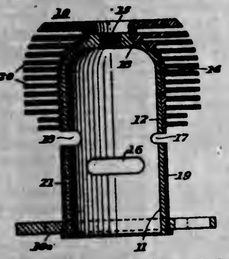
1. An electron-discharge device comprising a cathode, an anode structure spaced from said cathode and including a pair of anode arms which, together with that portion of the anode structure lying therebetween, defines a cavity resonator open at both ends, a source of electrons facing one of said open ends, an electron-reflecting electrode facing the other of said open ends, and means adjacent said source of electrons for shielding the surfaces of the anode arms from electrons emitted from said source.

2,462,138
METHOD OF MAKING SELF-ALIGNING BALL BEARINGS
Alfred L. Spangenberg, Los Angeles, Calif., assignor to Halfco, Inc., Los Angeles, Calif., a corporation of California
Application November 28, 1945, Serial No. 631,246
3 Claims. (Cl. 29—149.5)



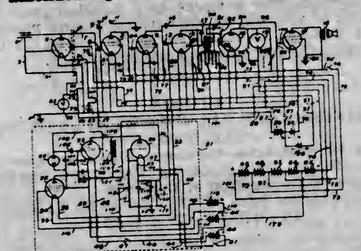
1. The method of securing a ball in an annulus within the limits of a determined tolerance range which consists in applying between the interlockable surfaces a film of high viscosity grease at room temperature, chilling the grease to increase its viscosity to a point where sufficient thickness of the film may be maintained to secure the desired tolerance under swaging pressures, thereafter swaging the annulus about the periphery of the ball so that the inner face of the annulus conforms to the curvature of the ball with the intervening grease film maintaining the tolerance equivalency desired, and thereafter washing out the grease.

2,462,139
THERMALLY EQUALIZED CYLINDER CONSTRUCTION
Harry P. Sparkes, West Orange, N. J., assignor to Spar-Holl Manufacturing Company, Glassport, Pa., a corporation of Pennsylvania
Application February 27, 1945, Serial No. 579,925
4 Claims. (Cl. 309—2)



1. A composite metal cylinder of the type having an inner working surface adapted for sliding contact with a coacting machine element and subject in use to high temperature at the working surface, comprising a ferrous inner cylinder of substantially uniform wall thickness and having a bore which provides said working surface, said inner cylinder being continuous and imperforate in at least the zone of sliding contact, a cuprous blanket surrounding the inner cylinder in a substantially uninterrupted manner, and an intermediate layer, the intermediate layer being thin as compared to the thickness of the blanket, the intermediate layer constituting a fusion weld between the inner cylinder and the blanket and uniting them into an integral unitary cylinder, the blanket being substantially iron-free and constituting a temperature levelling hood, the composite cylinder being characterized by substantial fredom from local overheating and distortion resulting therefrom.

2,462,140
PORTABLE BATTERY-POWERED GAMMA-RAY COUNTING RATE METER OF HIGH SENSITIVITY
Herbert Cecil Spicer, Takoma Park, Md.
Application November 21, 1945, Serial No. 630,102
6 Claims. (Cl. 250—83.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A portable highly sensitive device for detecting radio activity and indicating the relative intensity thereof, comprising a Geiger-Mueller counter tube, means for generating and applying a high voltage to the electrodes of said tube, means for amplifying the output pulses from said tube resulting from repeated ionization occurring therein responsive to the receipt of radiation, means connected to said amplifying means for indicating the rate of receipt of said pulses, in which said means for generating a high voltage comprises a relaxation oscillator, an interrupter tube, a rectifier tube, a regulator tube, with batteries for energizing the same, in which the relaxation oscillator is connected to be energized by one of said batteries, means for applying voltage pulses derived from said relaxation oscillator to a control grid of said interrupter tube, means for connecting said inductance in the anode circuit of said interrupter tube, whereby current flow therein is interrupted under control of said relaxation oscillator, means for connecting the inductance to the rectifier tube whereby the high voltage pulses incident to the interruption of the current in said inductance are rectified, means for connecting the output of said rectifier tube through said filter to energize the Geiger-Mueller tube, and means for deriving a voltage from said rectifier tube proportional to its output voltage and for applying said derived voltage to the control grid of said regulator tube, the anode of said regulator tube being connected by suitable resistance to the end of said inductance opposite to that end connected to the anode of the interrupter tube.

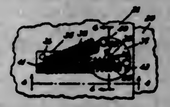
2,462,141
FASTENING DEVICE
Richard M. Sterer, Denver, Colo.
Application December 7, 1942, Serial No. 513,225
3 Claims. (Cl. 85—1)

2,462,142
LIGHTER
Harold J. Sudbrink, Woodside, Long Island, N. Y.
Application October 3, 1945, Serial No. 620,991
3 Claims. (Cl. 126—39)

winding connected in the anode circuit of said tube, a rectifier bridge having a pair of opposite junction points connected across a winding of said relay, and normally open relay contacts connected

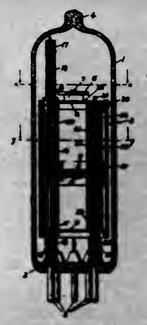
an amount of only about 0.1% of the weight of the insoluble sulphur, said finely divided sulphur being free-flowing and non-caking prior to the addition of the material.

2,462,141
FASTENING DEVICE
Richard M. Sterer, Denver, Colo.
Application December 7, 1943, Serial No. 513,225
3 Claims. (Cl. 24—221.2)



2. In a device for fastening two parts together, inclusive of a stud adapted to be rotatably attached to one of said parts, a base adapted to be attached to the other of said parts, and elements on said base adapted to inter-engage elements on the stud for fastening said parts together, the connection being tightened upon rotation of said stud in a pre-determined direction, the improvement which comprises turning means for engaging said stud inter-engaging elements to turn said stud; and resilient means fixed at one end with respect to the base and secured at the other end to said turning means for moving said turning means and stud in a direction to tighten such connection, and movable to a position past the center of rotation of the turning means wherein said turning means tends to be moved in the opposite direction by said resilient means.

2,462,142
COLD-CATHODE GAS TUBE WITH STARTING ELECTRODE
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 14, 1947, Serial No. 754,734
10 Claims. (Cl. 250—27.5)

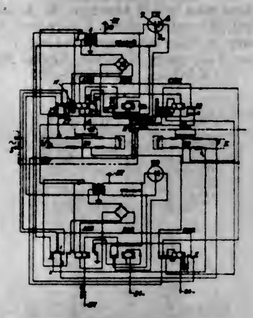


1. A gaseous-discharge device, comprising an envelope containing an ionizable gas, a relatively large hollow metallic cathode substantially filling the interior of said envelope, a wire anode passing longitudinally through the interior of said cathode to a point a substantial distance beyond one end of the same, an insulating sleeve surrounding said anode substantially throughout its length, a metallic sleeve substantially coextensive with said cathode surrounding said insulating sleeve, said metallic sleeve being directly connected to said cathode, a wire starting electrode passing longitudinally through the interior of said cathode to a point adjacent said one end thereof, and an insulating sleeve surrounding said electrode substantially throughout its length.

2,462,143
LIGHTER
Harold J. Sudbrink, Woodside, Long Island, N. Y.
Application October 2, 1946, Serial No. 699,061
3 Claims. (Cl. 67—7.1)

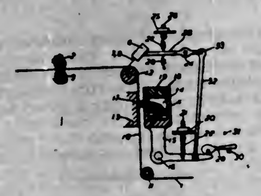
1. In a lighter at least two die-casts forming together a body, a flat face on each of said die-casts, two recesses in parallel arrangement in each of said faces, said recesses are adapted to form borings in said body when the said die-casts are put together face to face, said borings receiving a wick and a pyrophoric material, respectively, an abrasive wheel, integral projections on each of said die-casts, stud members in coaxial arrangement on each of said projections, said abrasive wheel freely rotatable on said stud members above said boring receiving the pyrophoric metal, the latter boring receiving the pyrophoric metal having an inner thread at its lower end adapted to receive a threaded member, means for retaining said die-casts in face-to-face position, and upper and lower shell sections jointly enclosing said body, said lower shell section serving as a fuel tank.

2,462,144
PULSE RECEIVING AND REPEATING SYSTEM
Clément M. Theillaumas, Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 12, 1946, Serial No. 661,493
In France March 27, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 27, 1965
6 Claims. (Cl. 179—84)



1. A pulse receiving system for telecommunication networks comprising a cold-cathode tube, a transformer having its secondary connected to the input of said tube and its primary arranged to receive an incoming signal, a relay having a winding connected in the anode circuit of said tube, a rectifier bridge having a pair of opposite junction points connected across a winding of said relay, and normally open relay contacts connected in series with the other pair of junction points of said bridge, arranged to connect said other pair of points across the signal input upon ionization of said tube.

2,462,145
RECORDING ELECTRIC SIGNALS
Frank Reginald Thomas, Croydon, England, assignor to Creed and Company Limited, Croydon, England, a British company
Application March 26, 1945, Serial No. 584,952
In Great Britain March 31, 1944
1 Claim. (Cl. 346—74)



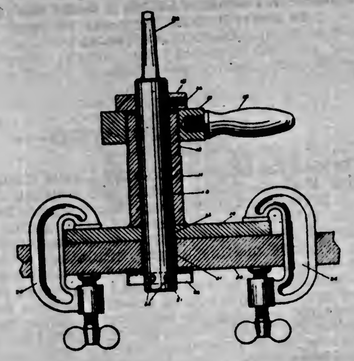
Arrangement for recording electric signals on ordinary paper, comprising recording means, means for causing relative travel between the paper and the recording means, said paper having a vertically extending portion along the travel path just before arrival at the recording position, said recording means having wick means for applying to only one surface of said paper at its said vertical portion a continuous strip of electrolytic solution at a position close enough to the recording position that the paper surface remains slightly moist as it passes through the recording position, a pair of insulated recording styli and means for applying said styli with light pressure against the said moist surface and series connected therethrough and adjacent the opposite limits of its strip to cause color change when energized.

2,462,146
STABILIZATION OF INSOLUBLE SULFUR
Raymond H. Walcott, Cranford, and Alvin Schallis, Jersey City, N. J., assignors to Stauffer Chemical Company, a corporation of California
No Drawing. Application December 3, 1945, Serial No. 632,606
9 Claims. (Cl. 23—224)

1. A process of stabilizing insoluble sulphur against reversion to the form of sulphur which is soluble in carbon disulphide comprising dissolving a material selected from the group consisting of turpentine, pine oil, pine tar and rosin in a solvent therefor and mixing the resulting mixture into initially free-flowing and non-caking sulphur consisting predominantly of insoluble sulphur to uniformly distribute the mixture through the sulphur, said insoluble sulphur being insoluble in said solvent.

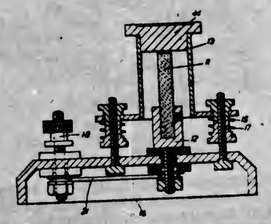
9. Finely divided solid sulphur containing sulphur substantially completely insoluble in carbon bisulphide as the predominant component thereof and a material selected from the group consisting of turpentine, pine oil, pine tar and rosin in an amount of only about 0.1% of the weight of the insoluble sulphur, said finely divided sulphur being free-flowing and non-caking prior to the addition of the material.

2,462,147
SPOT FACING JIG
William T. Waller, Philadelphia, Pa.
Application December 10, 1945, Serial No. 634,133
2 Claims. (Cl. 90—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A jig comprising a support, the support being apertured, a journal on the support, a spindle within the aperture of the support and journal, an adjustable stop on the spindle, screw threads on said journal, and a nut operable cooperatively therewith to move said stop and spindle longitudinally in the journal.

2,462,148
ELECTRIC SOLDERING APPARATUS
George Louis Ward, Northwood, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 10, 1943, Serial No. 490,246
In Great Britain July 17, 1942
4 Claims. (Cl. 219—12)



1. A soldering device comprising a base, a carbon heating electrode insulated from and fixedly supported on the base, a shroud of heat conducting material formed to provide an enlarged area soldering plate electrode positioned over the heating element, means for yieldingly supporting the shroud on the base in normally spaced rela-

tion to the heating electrode to be depressible by the work into circuit closing and heating engagement with the heating electrode and circuit connections to the electrodes.

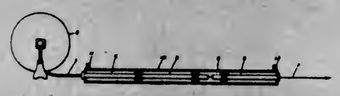
increments of said copy as said increments pass through said picture plane, while said camera is maintained in a fixed position relative to said picture plane.

to define a pathway for electron flow therebetween, and a control electrode encircling said

on movement thereof inwardly of the former, a nosepiece surrounding said member and provided with an inturned flange engaging the outer end of said collet and with a radially outwardly projecting flange spaced from and opposed to

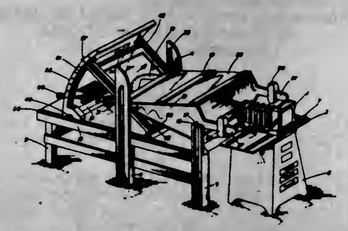
tion to the heating electrode to be depressible by the work into circuit closing and heating engagement with the heating electrode and circuit connections to the electrodes.

2,462,149
PROCESS FOR TREATMENT OF CABLE INSULATED WITH THERMOPLASTIC MATERIAL
John Krauss Webb, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application December 19, 1945, Serial No. 636,022
In Great Britain December 22, 1944
1 Claim. (Cl. 18—48)



Process for treating a thermo-plastic insulated cable that comprises placing the finished cable in a pressure chamber, applying pressure to the cable within the chamber and maintaining the cable at a temperature such as to cause softening without melting of the insulation whereby the insulation is compressed and gas within voids in such insulation is subjected to increased pressure causing reduction in the size of such voids, thereafter reducing the temperature while maintaining the pressure whereby the insulating material becomes solid, then storing the cable at sub-atmospheric pressure whereby gas in the voids diffuses through the insulating material into the surrounding atmosphere.

2,462,150
APPARATUS FOR MAKING AXONOMETRIC DRAWINGS
Walter G. Wilkinson, Woodlawn, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Original application December 15, 1944, Serial No. 568,243. Divided and this application October 12, 1945, Serial No. 621,392
5 Claims. (Cl. 88—24)

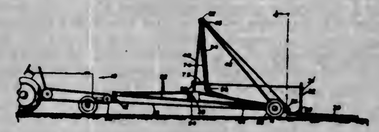


1. A photographic apparatus for recording an axonometric projection comprising an adjustable copy board having an orthographic view positioned thereon at a predetermined angle relative to the picture plane, a camera spaced from the copy board and an intermediately positioned scanning device adapted to restrict the vision of the camera, and means for simultaneously moving the said copy board in a direction parallel to the axis of the camera as said scanning device moves parallel to the picture plane of the camera to scan increments of said copy as said increments pass through said picture plane, while said camera is maintained in a fixed position relative to said picture plane.

2,462,151
PHOTOGRAPHIC ELEMENTS HAVING HYDROPHILIC POLYVINYL ACETAL COLLOID SUBLAYERS
David W. Woodward, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application September 23, 1946, Serial No. 698,799
9 Claims. (Cl. 95—9)

1. A photographic element comprising a water-insensitive support and a water-permeable colloid layer anchored thereto with a thin layer of a hydrophilic acetal of a vinyl alcohol polymer with an aldehyde containing a group taken from the class consisting of free carboxylic acid and free sulfonic acid groups and their water-soluble salts but which is otherwise unsubstituted.

2,462,152
COMBINATION SWEEP RAKE AND STACKER
Thomas J. Young, Harold N. Young, and Jennings Bryan Rambo, Meridian, Idaho
Application February 21, 1947, Serial No. 729,982
4 Claims. (Cl. 214—131)

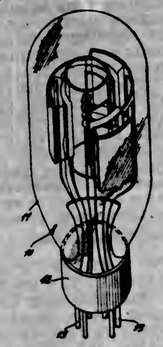


1. An agricultural implement including a frame having a tractor hitch at the rear end thereof and having a sub-frame pivotally secured thereto intermediate the ends thereof, said sub-frame having ground contacting wheels at the forward end thereof, a rake having a plurality of substantially parallel forwardly extending spaced tangs and right angularly disposed extending portions rigidly secured to a cross member, said cross member being pivotally secured to the forward end of said frame, means to tilt said frame upwardly at the forward end, said sub-frame having a transversely disposed axle on the front end thereof for said wheels, and said frame being supported at the front end by said axle when said frame is in non-elevated position.

2,462,153
ELECTRON DISCHARGE DEVICE
Hilmar A. Andresen, Chicago, Ill.
Application May 28, 1945, Serial No. 596,233
11 Claims. (Cl. 250—27.5)

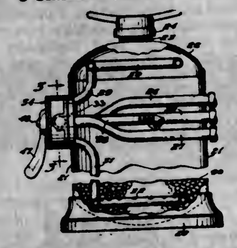
10. An electron discharge device including in combination, a lengthy cathode, a lengthy anode spaced from said cathode with its length substantially parallel to the length of said cathode, a dielectric body having a passage directed transverse to the length of said cathode and said anode

to define a pathway for electron flow therebetween, and a control electrode encircling said



dielectric body to establish a field therein to control electron flow through said passage.

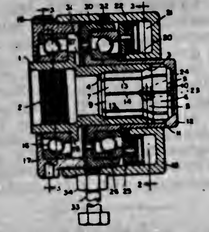
2,462,154
WATER SOFTENER
John V. Barnes, La Canada, Calif.
Application December 10, 1946, Serial No. 715,150
8 Claims. (Cl. 210—24)



1. In a water softener, the combination with a tank for holding a softening agent, a control valve including a casing having a rear wall exposed within the tank, upper and lower spray bars within the tank, each having a connection to the valve through said rear wall, house service, drain and water inlet tubes extending transversely through the tank from front to rear thereof and having connections with the valve through said rear wall, and a valve core in said valve casing adjustable to a normal service position providing for normal flow through the tank and to house service connection, and a backwash position providing for reverse flow through the tank and to the drain outlet tube.

2,462,155
CHUCK
Milton L. Benjamin, Shaker Heights, and Franklyn E. Winnen, Cleveland, Ohio; said Winnen assignor to said Benjamin
Application December 5, 1945, Serial No. 632,893
2 Claims. (Cl. 279—4)

2. In a chuck, the combination of a hollow cylindrical supporting member formed with a radially outwardly projecting flange between its rear and outer ends, a contractible collet reciprocably mounted in the outer end of said member, said member and collet being formed with coacting faces whereby the latter is contracted upon movement thereof inwardly of the former, a nosepiece surrounding said member and provided with an inturned flange engaging the outer end of said collet and with a radially outwardly projecting flange spaced from and opposed to the flange on said member, a cylindrical casing surrounding said member and nosepiece and provided with inturned flanges straddling the radially outwardly projecting flanges on said member and nosepiece, said casing comprising a pair of casing members threaded together, means for locking said casing members against rotation relative to one another, a bearing engaged between the flange on said supporting member and that flange on said casing which is rearward of the flange on said supporting member, said casing being formed with an axial flange projecting rearwardly toward the radially outwardly projecting flange on said nosepiece from that flange



on said casing which is outward of the flange on said nosepiece whereby to define an annular chamber in said casing surrounding said nosepiece, an annular piston reciprocable axially in such chamber, another bearing engaged between said piston and the radially outwardly projecting flange on said nosepiece, and means for admitting fluid under pressure into such chamber to thus move said piston relative to said casing and through said another bearing urged said nosepiece and thus said collet inwardly of said supporting member, said collet upon release of fluid under pressure from such chamber being operative to move outwardly of said supporting member and thereby move said nosepiece, another bearing, and piston outwardly, and adjustable plural stop means in said casing respectively operative to arrest inward movement of said piston by fluid under pressure and to arrest outward movement of said piston by said collet.

2,462,156
BED SHEET CONSTRUCTION
Bertha Berman, New York, N. Y.
Application December 9, 1947, Serial No. 790,559
4 Claims. (Cl. 5—335)

2. A sheet construction comprising a center area for covering a horizontal side of a mattress, end and side marginal areas to cover vertical ends and sides of the mattress, respectively, when folded along lines bordering said center area, an end flap terminating one of said side marginal areas, one of said end marginal areas being formed with a rim edge polygonally shaped re-

cess adjacent said flap extending towards one of said fold lines and terminating short of the latter to provide a marginal area portion for extending to cover the mattress edge when said

consisting of linear polyamides obtained by reacting by self-polymerisation a monoaminomonocarboxylic acid, by reacting in substantially equi-

adapted to engage under the inturned upper edge of said sock to retain said sock in a smooth fixed position on the ankle, and leg, of the wearer there-

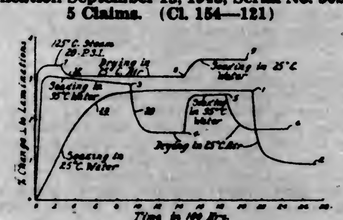
shape member disposed in said slot and bearing on one of said sections, the small end of said wedge shape member having a hole therein, a locking member having a slot therein, and a fas-

cess adjacent said flap extending towards one of said fold lines and terminating short of the latter to provide a marginal area portion for extending to cover the mattress edge when said flap is folded to overlie said recess, and fastening means carried along a rim edge of said flap on one side of said sheet and along a rim edge of said recess on the other side of said sheet for releasably securing said flap in said folded position to form a fitted corner.

2,462,157
METHOD OF ELIMINATING POROSITY IN CRYSTALLINE SELENIUM FILMS
Wayne E. Blackburn, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application November 10, 1943, Serial No. 509,816
6 Claims. (Cl. 117—62)

6. The method of producing selenium units which comprises forming a coating consisting of selenium on a metal plate, immersing the coated plate for a period of about three minutes in a solution of about 3.6 grams of sodium hydroxide per 100 cubic centimeters of glycerine maintained at a temperature between 170° C. and 185° C., removing the solution from the plate, thereafter annealing the plate for a period of about five to fifteen hours and providing the surface of the selenium with a conducting layer.

2,462,158
METHOD OF PRODUCING ARTICLES OF MANUFACTURE
John Boyd, Pittsburgh, and Richard A. Bice, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 15, 1943, Serial No. 502,498
5 Claims. (Cl. 154—121)



5. In the method of producing a bearing stave, in combination, immersing a bearing material consolidated from laminated sheets of cloth fabric impregnated with a heat-hardening resinoid in water at a temperature of about 95° C. for a period of time sufficient to effect the swelling thereof perpendicular to the faces of the laminations, and thereafter drying the bearing material in air, the dried bearing material retaining a major part of the increase in size imparted thereto by the immersion.

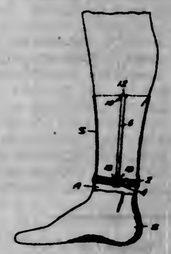
2,462,159
CELLULOSE DERIVATIVE COMBINED WITH N-ALKOXYMETHYL POLYAMIDE
Robert L. Brown, Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 6, 1944, Serial No. 539,628
22 Claims. (Cl. 260—15)

1. The process which comprises dissolving in a common solvent therefor, a member of the class consisting of linear polyamides obtained by reacting by self-polymerization a monoaminomonocarboxylic acid, by reacting in substantially equimolecular amounts a diamine with a dibasic carboxylic acid, by reacting in substantially equimolecular amounts a monoaminomonohydric alcohol with a dibasic carboxylic acid, and by reacting the amide-forming derivatives of said reactants; and a cellulose derivative of the class consisting of cellulose esters and cellulose ethers, said cellulose derivative having free hydroxyl groups, and reacting the linear polyamide with formaldehyde and a substance of the class consisting of monomeric alcohols, and mercaptans in which the thiol groups are attached to an aliphatic carbon atom, in the presence of an acidic substance.

2,462,160
COMBINED CIGARETTE OR TOBACCO PACKAGE AND ASH TRAY
Thomas Joseph Bryan, Brooklyn, N. Y.
Application October 29, 1945, Serial No. 625,231
1 Claim. (Cl. 206—41)

The combination with a standard commercial cigarette filled package having a plurality of sides, of a fire resisting paper ash tray attached to one side of the package and normally collapsed against the side of the package, said tray comprising end members which fold between side members approximately one-half the width of the base of the tray, and a paper seal attached to the folded sides of the tray and provided with a weakening line located between the confronting edges of the folded sides.

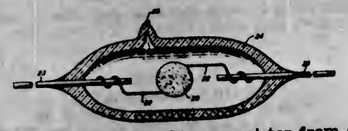
2,462,161
HOSE SUPPORTER
Howard F. Callis, Norfolk, Va.
Application August 8, 1946, Serial No. 689,304
1 Claim. (Cl. 2—303)



A hose supporter comprising an ankle encircling resilient band adapted to be applied to a wearer's ankle inside a sock on the wearer thereof, hose engaging stays extending upwardly from said band, the lower ends of said stays being T-shaped in formation and having depending serrated portions at the outer ends of said T-formation to engage and retain said stays on said band, the upper ends of said stays being bowed outwardly away from the leg of the wearer, and enlarged portions having serrations on the edge thereof formed on the upper end of the stays and

adapted to engage under the inturned upper edge of said sock to retain said sock in a smooth fixed position on the ankle, and leg, of the wearer thereof.

2,462,162
METALLIC OXIDE RESISTOR
Howard Christensen, Springfield, and Joseph J. Kleimack, Westfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 3, 1944, Serial No. 543,372
4 Claims. (Cl. 201—76)

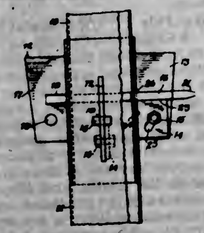


1. In a method of making a resistor from sintered metallic oxides wherein said resistor is brought to an elevated temperature, as a result of processing steps subsequent to sintering, the step of stabilizing the resistance of said resistor that comprises heating the resistor to said elevated temperature prior to said subsequent steps and maintaining it at this temperature until its oxygen comes to equilibrium with that of the ambient atmosphere, and then sealing a protective covering over the resistor at the same elevated temperature.

2,462,163
MANUFACTURE OF ESTERS
Frank O. Ceckerille, Albemarle County, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 24, 1943, Serial No. 503,655
2 Claims. (Cl. 260—498)

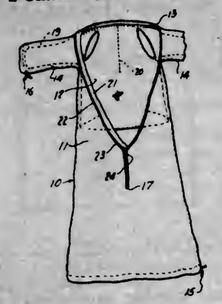
1. In the manufacture of vinyl and ethylidene esters, wherein acetylene is reacted with a carboxylic acid whereby to form said esters, the improvement which comprises reacting the acetylene and the carboxylic acid in the presence of about 0.001 to about 0.01 gram mol of dimethyl aniline per liter of reaction mixture.

2,462,164
LOCKING DEVICE
Harold Cohen, Elizabeth, N. J.
Application May 16, 1945, Serial No. 594,092
2 Claims. (Cl. 287—119)



1. A structure including structural sections in overlapping relation, and a securing device to hold said sections extended in the overlapped relation, said device comprising a bar extending crosswise through said sections, said bar having a longitudinal slot therein near one end thereof, a wedge shape member disposed in said slot and bearing on one of said sections, the small end of said wedge shape member having a hole therein, a locking member having a slot therein, and a fastener extending through the hole in the wedge shape member and the slot in the locking member to hold the wedge shape member in place.

2,462,165
GARMENT FOR INFANTS
Naomi V. Condon, Detroit, Mich.
Application December 28, 1945, Serial No. 637,641
1 Claim. (Cl. 2—111)



A garment for infants comprising a loose fitting robe having sleeves and having an opening extending from the neck receiving portion to a point intermediate the ends thereof, a snug fitting shirt having sleeves extending into the sleeves of the robe and also having an opening extending from the neck receiving portion to the bottom thereof, means permanently securing the edge portions of the shirt at opposite sides of the opening to corresponding edge portions of the robe and for also securing the sleeves of the shirt to the sleeves of the rob at the top of the shoulder portions while leaving the remaining portions of the sleeves unattached to enable free movement of the shirt sleeves relative to the robe sleeves, and common fastening means for detachably connecting the free edge portions of the robe and shirt together.

2,462,166
SINGEING DEVICE FOR TEXTILE FABRICS AND THE LIKE
Francis M. Crossman, New York, N. Y.
Application January 25, 1945, Serial No. 574,523
5 Claims. (Cl. 26—3)

1. In a textile fabric singeing device through which a fabric moves, two gas burning infra red ray generators oppositely placed at the two sides of the fabric and facing one another, said generators being of elongated trough shapes, and at least as long as the width of the fabric moving through said device, with troughs facing each other at the two sides of the fabric, a refractory lining entirely covering their facing surfaces, a rotatable combustible mixture manifold at each side of the fabric, pipes projecting from said

manifold to feed and to carry said generators, said combustible gas mixture entering said generators at substantially high pressure, and being adapted to produce substantially high tempera-

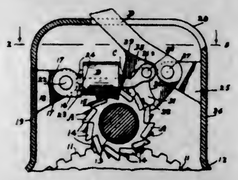
tainer, then filling said tube with the medicament and withdrawing the tube, leaving the

generator to a control source in opposition to said one field winding as to effectively neutralize said

ends of said laterally extending plates, said metal spacer members substantially filling the spaces between the ends of the laterally extending plates, whereby the spacer members and the ends of the plates form a continuous surface, a cooling coil in said case adapted for circulation of a liquid

manifold to feed and to carry said generators, said combustible gas mixture entering said generators at substantially high pressure, and being adapted to produce substantially high temperatures at the surface of the lining.

2,462,167
RATCHET AND PAWL MECHANISM FOR HAND BRAKES
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application March 11, 1946, Serial No. 653,651
12 Claims. (Cl. 188—81.1)



1. In a hand brake mechanism, the combination with a member adapted to be rotated to effect tightening of the brake; of ratchet means rotatable with said member, said ratchet means having two annular sets of ratchet teeth, the teeth of each of said sets being staggered with respect to the teeth of the other set; an oscillating dog pivoted between its ends having ratcheting engagement at opposite ends with said sets of ratchet teeth, respectively; and manually controlled means for moving said dog into and out of engagement with said ratchet means.

2,462,168
ANTICUT NONSTRIP-OUT HANDLE
Delos A. Davis, Detroit, Mich.
Application January 31, 1945, Serial No. 575,490
2 Claims. (Cl. 16—126)

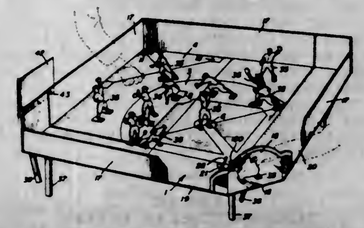
1. In a device of the class described, the combination with fastening means, of a handle provided with a portion extending through said fastening means, said handle provided with a pair of U-shaped end-portions, each end-portion provided with a free leg, and said end-portions lying in a common horizontal plane with the free leg of each lying between the legs of the other U-shaped end-portion.

2,462,169
INHALER FOR TREATING SINUS AND HAY FEVER AND METHOD OF SEALING A MEDICAMENT THEREIN
Glen Teeple Davisson, El Paso, Tex.
Application April 30, 1945, Serial No. 591,152
7 Claims. (Cl. 128—200)

1. A method of injecting and sealing a medicament in a container, which consists in first wrapping tightly an absorbent material around a tube, then inserting the thus wrapped tube in said container, then filling said tube with the medicament and withdrawing the tube, leaving the

medicament in said material and finally sealing both inlet and outlet ends of the container.

2,462,170
TABLE BASEBALL
Noël A. Dubé, Salmon Falls, N. H.
Application August 28, 1947, Serial No. 771,021
1 Claim. (Cl. 273—90)

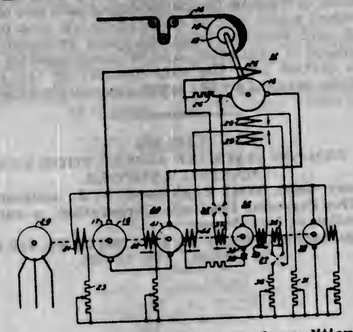


Game apparatus comprising in combination, a simulated baseball field including an outfield and a home plate, a plurality of simulated players manually movable upon said field, a plurality of dice with markings on the sides, a bat pivotally mounted adjacent said home plate and manually operable to strike a die manually cast from the outfield to pass over said home plate, said simulated players in playing positions on said field functioning as directing means for the dice cast from the outfield as well as the dice struck by said bat.

2,462,171
GENERATOR FED MOTOR CONTROL SYSTEM
John R. Erbe and Glenn A. Caldwell, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 17, 1946, Serial No. 684,108
9 Claims. (Cl. 318—6)

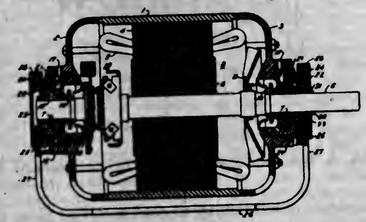
1. A reel drive system comprising, a reel motor having an armature and a plurality of field windings, circuit means connecting the armature to a principal source of electrical energy, a control generator having an armature connected in circuit relation with the motor armature and the principal source and having a plurality of field windings, circuit means connecting one field winding of each the motor and the control generator to a substantially constant voltage source, a regulating generator having an armature connected in circuit with another field winding of each the control generator and the motor and having a plurality of field windings, circuit means connecting one of the field windings to be energized in accordance with the armature current of the motor, and additional circuit means so connecting another field winding of the control

generator to a control source in opposition to said one field winding as to effectively neutralize said



one winding under predetermined conditions of armature current.

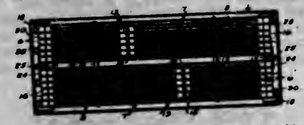
2,462,172
MOTOR CONSTRUCTION
Raymond W. Esarey, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 19, 1945, Serial No. 629,655
6 Claims. (Cl. 172—36)



1. A dynamo-electric machine having a stator member and a rotor member, said stator member including an end bracket, said end bracket having a central recess therein extending to the outer side of the end bracket, a bearing for the rotor member supported in the end bracket within said recess, the diameter of all parts of the recess being greater than the diameter of the bearing to provide an annular space around the bearing, lubricating means for the bearing disposed in said annular space, a cap member fitting in the recess and closing the annular space, and resilient mounting means carried on said cap member for resiliently supporting the machine.

2,462,173
HIGH-FREQUENCY CAPACITOR
Charles V. Fields, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 19, 1947, Serial No. 755,757
9 Claims. (Cl. 175—41)

1. A capacitor comprising a case, a plurality of metal plates disposed in said case in parallel relation and spaced from each other, alternate plates extending laterally beyond the intervening plates, and the intervening plates extending vertically above the first-mentioned plates, metal spacer members disposed between the extending ends of said laterally extending plates, said metal spacer members substantially filling the spaces between the ends of the laterally extending plates, whereby the spacer members and the ends of the plates form a continuous surface, a cooling coil in said case adapted for circulation of a liquid cooling medium, said cooling coil being disposed in contact with the surface formed by the spacer members and laterally extending plates and joined thereto with a connection of good thermal and electrical conductivity, terminal means on the case, means for electrically connecting said vertically extending plates to said terminal means,

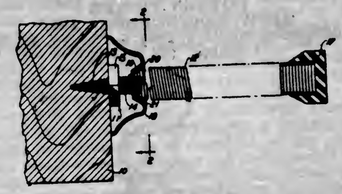


and a liquid dielectric medium substantially filling the case.

8. A capacitor comprising a case, a plurality of metal plates in said case, means for supporting said plates, said supporting means including a plurality of nested insulating spacers adapted to support the plates between them in parallel, spaced relation, alternate ones of said plates extending beyond the intervening plates, means for effecting electrical connection to said intervening plates, means for directly cooling said extending plates and for effecting electrical connection

---

2,462,174
DOORSTOP
Bernard E. Fisher, Detroit, Mich.
Application June 12, 1946, Serial No. 676,149
5 Claims. (Cl. 16—86)



thereto, and a liquid dielectric medium substantially filling the case.

1. A door stop comprising, a supporting member having a threaded portion, a cap member over the threaded portion of said supporting member, said cap having a conical opening converging inwardly thereof surrounding the threaded portion of said supporting member, a coil spring having an outer bumper end, said coil spring having an inner tapered end portion seating in the conical seat of said cap member and threadedly connected to the threaded portion of said supporting member.

2,462,175
ARYL AZO SULFONIC ACID SALTS OF STREPTOTHRICIN AND STREPTOMYCIN
Karl Folkers, Plainfield, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application June 23, 1945, Serial No. 601,335
23 Claims. (Cl. 260—210)

6. The process that comprises reacting a substance of the class consisting of crude acid salts

of the water-soluble, basic, Actinomyces elaboration products, streptothricin and streptomycin, with an alkaline salt of an aryl azo sulfonic acid and recovering the crystalline aryl azo sulfonic acid salt of the elaboration product.

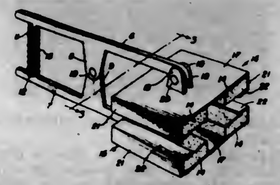
positioned forwardly with respect to the brush on that side, whereby a substantial portion of the cotton carried on the periphery of said one of the toothed rotors will be engaged by the stop member, and removes from the rotor responsive to

2,462,179
PROTECTIVE RELAYING SYSTEM FOR POLYPHASE CIRCUITS
Shirley L. Goldsborough, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsyl-

circuit interrupters in the several phase-conductors of a three-phase line, comprising a pilot-channel relaying-means for obtaining a fault-responsive relay-operation under the supervision of pilot-channel intelligence received from the far end of the protected line-section, ground-

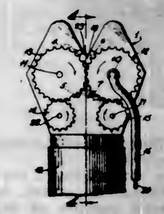
of the water-soluble, basic, Actinomyces elaboration products, streptothricin and streptomycin, with an alkaline salt of an aryl azo sulfonic acid and recovering the crystalline aryl azo sulfonic acid salt of the elaboration product.

2,462,176
HONE FOR RECONDITIONING CUTTERS IN PENCIL SHARPENERS
William H. Fryar, Litchfield, Ill.
Application May 17, 1948, Serial No. 27,495
4 Claims. (Cl. 51—205)



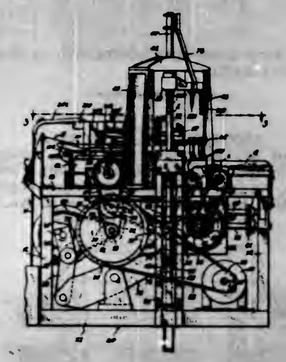
1. A hand sharpening implement for honing and reconditioning rotary cutters in a pencil sharpener comprising a pair of opposed complemental levers, said levers having lugs intermediate the ends of the levers, said lugs being hingedly connected with one another, spring means interposed and fastened between the rearward ends of said levers, duplicate holders pivotally mounted on the forward ends of said levers, and hones mounted in said holders.

2,462,177
COTTON PICKER
Lee W. Gant, McKinney, Tex.
Application March 6, 1945, Serial No. 581,244
1 Claim. (Cl. 56—40)



A cotton picker head comprising a casing formed at its forward wall with a guide trough adapted to receive a cotton stalk, the bottom of the trough being formed with a slot extending substantially for the full length of the trough, a pair of toothed rotors journalled symmetrically in the casing on each side of the slot, adjacent thereto and parallel therewith, means for rotating said rotors in opposite directions with the forward peripheral toothed portions thereof moving toward each other, a pair of rotary brushes journalled symmetrically in the casing, each brush being rearwardly adjacent and parallel to one of the toothed rotors, means for rotating each brush in an opposite sense and at a different rate of speed relative to the toothed rotor to which it is rearwardly adjacent, a pair of stop members secured symmetrically in the casing, each stop member being rearwardly adjacent and parallel to one of the toothed rotors but being positioned forwardly with respect to the brush on that side, whereby a substantial portion of the cotton carried on the periphery of said one of the toothed rotors will be engaged by the stop member, and removes from the rotor responsive to rotation of said rotor, and whereby residual cotton carried past the stop member by the rotor will be engaged by the brush rearwardly adjacent the rotor.

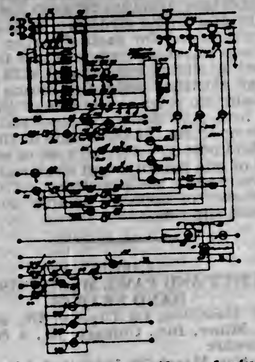
2,462,178
TAMPON MACHINE AND METHOD FOR MAKING TAMPONS
Henry Ganz, West Englewood, N. J., assignor to The Personal Products Corporation, a corporation of New Jersey
Application January 12, 1944, Serial No. 518,160
26 Claims. (Cl. 18—5)



18. A tampon machine comprising means for feeding a web of fibrous, absorbent material, means adjacent the feeding means for separating a predetermined length of said material from the remainder thereof, a die positioned to receive said length of material in one position, means for supporting said die, means associated with said die supporting means to intermittently move said supporting means and said die to a recurring series of different positions, means adjacent the material receiving position of said die to insert said length of material in said die, means adjacent one of said die positions and cooperating with an opening in said die for making an opening through the thickness of said material, means adjacent one of said die positions for inserting a draw cord through said opening in said die and said material, means adjacent one of said die positions for tying said cord to said material and means adjacent one of said die positions and cooperating with said die for compressing said material.

24. The method of making a tampon comprising preforming a web of fibrous absorbent material into a substantially U-shaped loosely compacted substantially cylindrical formation whose outer diameter is that of the finished tampon, separating from each other a portion of the legs of the U to provide a string insertion opening therefor, forming a length of the string in a two-legged loop across said formation while maintaining said loop open to receive the free ends of said string, threading said string through said opening and compressing said cylindrical formation.

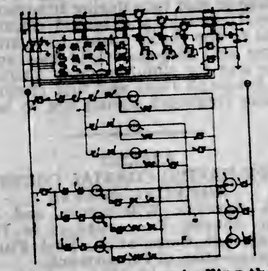
2,462,179
PROTECTIVE RELAYING SYSTEM FOR POLYPHASE CIRCUITS
Shirley L. Goldsborough, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 21, 1944, Serial No. 569,181
15 Claims. (Cl. 175—294)



1. Fault-responsive protective relaying means for controlling each of a plurality of single-pole circuit-interrupters in the several phase-conductors of a three-phase line, comprising ground-fault relaying-means for selecting the faulted line-conductor in the event of a predetermined single line-to-ground fault on the line, means responsive to an operation of a ground-fault relaying-means for causing an opening-operation of only the single-pole circuit-interrupter in the selected line-conductor, phase-fault relaying-means for responding to at least one of the two faulted line-conductors in the event of a predetermined fault involving two line-conductors of the line, said ground-fault relaying means being of a type which is likely to erroneously select the unfaulted phase in the event of a double phase-to-ground fault, and auxiliary interrupter-controlling means correlating the responses and non-responses of particular phases of said ground-fault and phase-fault relaying means for causing opening operations of only the two single-pole circuit-interrupters in the two faulted line-conductors involved in the double phase-to-ground fault-condition which caused the response of the phase-fault relaying-means, said auxiliary interrupter-controlling means comprising a means for utilizing a phase-fault response, in one of said two faulted phases, to prevent an erroneous interrupter operation in response to the erroneous ground-fault selection and to complete a connection between the phase-fault selection of said one of the two faulted phases and the interrupter-controlling means for the other faulted phase in the event of a double phase-to-ground fault.

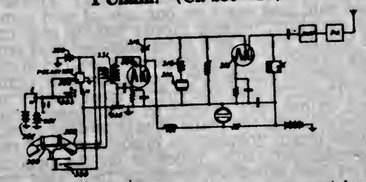
2,462,180
SELECTIVE-POLE TRIPPING SYSTEM
Shirley L. Goldsborough, Basking Ridge, and John L. Blackburn, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 28, 1947, Serial No. 788,582
3 Claims. (Cl. 175—294)

1. Fault-responsive protective relaying-means for controlling each of a plurality of single-pole circuit-interrupters in the several phase-conductors of a three-phase line, comprising a pilot-channel relaying-means for obtaining a fault-responsive relay-operation under the supervision of pilot-channel intelligence received from the far end of the protected line-section, ground-fault phase-selector means for obtaining a phase-selecting relay-operation in response to line-conditions obtaining in the event of a single line-to-ground fault, phase-fault phase-selector means for obtaining a phase-selecting relay-operation in response to line-conditions obtaining in the event of a phase-to-phase line-fault, said phase-fault phase-selector means being operative to reliably select only one of the two line-conductors which are involved in some line-to-line faults, ground-fault circuit-interrupter



control-circuit means for controlling the selected phase of the single-pole circuit-interrupters in joint response to said pilot-channel relaying-means and said ground-fault phase-selector means, phase-fault circuit-interrupter control-circuit means for controlling the selected phase of the single-pole circuit-interrupters in joint response to said pilot-channel relaying-means and said phase-fault phase-selector means, and auxiliary interrupter-controlling circuit-means, associated with said phase-fault circuit-interrupter control-circuit means, for joining the control-circuit selected by a phase-fault selector-means to the control-circuit for a second line-phase, in response to a response of the phase-fault phase-selector means for the selected line-phase and a non-response of the phase-fault phase-selector means for the third line-phase.

2,462,181
RADIO TRANSMITTING SYSTEM
Walter H. Grosselfinger, Manhasset, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 28, 1944, Serial No. 556,112
1 Claim. (Cl. 250—17)



A signal transmitting system comprising in combination a source of telegraph signals including a telegraph relay, a source of audio frequency signals including a telephone handset provided with a cradle switch, an electronic oscillator for generating high frequency electric wave energy,

a piezoelectric crystal for controlling said oscillator for determining the frequency of said wave energy, and modulating means for effecting changes in the frequency of said wave energy

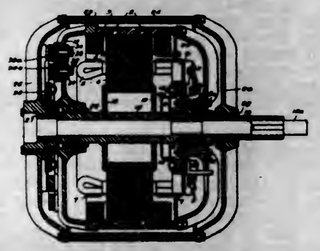
shaft, a commutator assembly supported adjacent said armature structure for rotation therewith and electrically connected to the windings on said armature structure, a plurality of com-

poles to become abnormally large, at a beat-frequency, at certain moments when it happens that the primary current in the main winding for that pole is a maximum at the same moment

a terminal plate sandwiched between the like faces of one pair, a pair of terminal plates separated by insulation sandwiched between the like faces of the other pair, and means for connecting

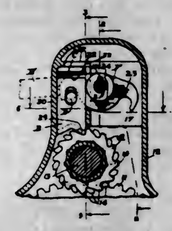
a piezoelectric crystal for controlling said oscillator for determining the frequency of said wave energy, and modulating means for effecting changes in the frequency of said wave energy from one wavelength to a different wavelength in accordance with variations in said signals, said modulating means including a condenser and an electronic tube connected in series with each other and in parallel with the crystal, said electronic tube having a plurality of electrodes including a grid, a source of grid bias voltage for said tube, and control means for effecting changes in the conductivity of said tube in accordance with variations in said signals, said control means being characterized by having circuit means connected to the telegraph relay for intermittently connecting said source of grid bias voltage to said tube during the transmission of telegraph signals, and second circuit means connected to the cradle switch for continuously connecting said source of grid bias voltage to said tube and for simultaneously short-circuiting said telegraph relay and first circuit means when audio frequency signals are to be transmitted.

2,462,182
MOTOR HAVING COAXIAL COUNTER-ROTATING SHAFTS
Dikran A. Guerdan, Wilkinsburg, and John E. Bluman, Sharon, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 28, 1945, Serial No. 631,394
1 Claim. (Cl. 172—36)



An electric motor comprising, in combination, a field pole structure of magnetic material, an armature structure of magnetic material, windings on said armaure structure, windings on said field pole structure, a first shaft, means securing said amature structure to said first shaft substantially centrally thereof such that portions of said first shaft extend beyond the axial extremities of said armature structure, a second shaft of tubular configuration concentrically arranged about said first shaft on one side of said armature structure, bearing means joining said first and second shafts at a point adjacent said armature structure, supporting means secured to said field pole structure and straddling said armature structure, said supporting means being secured on one side thereof to said second shaft substantially in the plane of said bearing means, bearing means joining the opposite side of said supporting structure, which is on the opposite side of said armature structure from said first named bearing means, in bearing engagement with said first shaft to permit relative rotational movement, a frame structure straddling said supporting structure, bearing means joining one side of said frame structure to said second shaft and the other side of said frame structure to said first shaft, a commutator assembly supported adjacent said armature structure for rotation therewith and electrically connected to the windings on said armature structure, a plurality of commutator brushes comprising brush sets of opposite polarity, means securing said commutator brushes to said supporting structure with the commutator brushes in sliding engagement with said commutator, a pair of slip rings secured to said supporting structure between the supporting structure and frame structure, at least two slip ring brushes, one for each slip ring, means securing said slip ring brushes to said frame structure, each in sliding engagement with one of said slip rings, electrical conductor means connecting one of said slip rings to one side of the windings on the field pole structure, electrical conductor means connecting the other side of the windings on the field pole structure to a set of commutator brushes of one polarity, and electrical conductor means connectiig the remaining set of commutator brushes of opposite polarity to the other side of said slip rings.

2,462,183
RATCHET AND PAWL MECHANISM FOR HAND BRAKES
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application March 23, 1946, Serial No. 656,594
8 Claims. (Cl. 188—81.1)

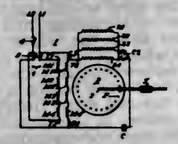


1. In a hand brake mechanism, the combination with a member adapted to be rotated to tighten the brakes; of a ratchet element rotatable with said member, said element having two laterally spaced sets of inclined peripheral teeth, the teeth of said two sets being staggered with respect to each other; a pair of locking dogs respectively engaged with said sets of teeth; a rocker connecting said dogs; and a lever operated trip member engageable with said rocker to move the same and the dogs therewith into and out of engagement with said ratchet element.

2,462,184
QUIET SINGLE-PHASE MOTOR
Clarence B. Hathaway and Richard F. Woll, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 12, 1944, Serial No. 558,312
19 Claims. (Cl. 318—225)

1. A self-starting single-phase capacitor-start induction motor having a stator-member having a main winding and a starting winding, a rotor-member having a squirrel-cage winding of sufficiently high resistance to produce a reasonably good starting-torque and to cause the squirrel-cage winding to inadequately counteract the tendency of the motor-flux under one of the

poles to become abnormally large, at a beat-frequency, at certain moments when it happens that the primary current in the main winding for that pole is a maximum at the same moment when a spot of maximum permeability, on the rotor-member, comes under that pole, switching-means for disconnecting the starting winding from its energizing source during running conditions, a rotor-journalling bearing having only a small amount of damping-effect, inadequate to



damp out slight but audible radial rotor-displacements, and means for providing parallel-connected coils on the stator-member for equalizing the field-strength of one portion of the circumference with respect to the field-strength of another portion which would have an equal field-strength if the rotor-reluctance were completely symmetrical at all points around the circumference under all running-conditions of the motor

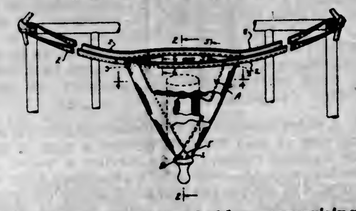
2,462,185
MOISTUREPROOF, HEAT-SEALABLE WRAPPING MATERIAL AND PROCESS
Paul Matthew Hauser, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 19, 1946, Serial No. 648,831
8 Claims. (Cl. 117—76)

1. Moistureproof, heat-sealable sheet wrapping material comprising a non-fibrous base film of regenerated cellulose provided with a continuous sub-coating comprising essentially a resinous aliphatic ether derivative of a methylol melamine wherein the ether radical of said derivative contains from 3 to 8 carbon atoms, and nitrocellulose, wherein the ratio of the resinous ether derivative to nitrocellulose is within the range of 20/80 to 75/25, and a continuous top-coating comprising essentially a vinylidene chloride-acrylonitrile copolymer containing at least 80% vinylidene chloride.

2,462,186
RECTIFIER
Carl C. Hein, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1945, Serial No. 582,895
1 Claim. (Cl. 175—366)

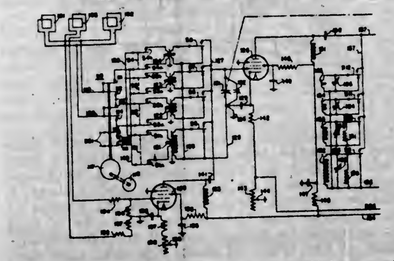
A rectifier assembly comprising a central insulating support and four unit rectifiers mounted thereon in pairs, each pair comprising two unit rectifiers with their like faces adjacent each other, a terminal plate sandwiched between the like faces of one pair, a pair of terminal plates separated by insulation sandwiched between the like faces of the other pair, and means for connecting said pair of terminal plates respectively to the remote faces of the rectifiers of the first-mentioned group.

2,462,187
NURSING BOTTLE HOLDER
Mathilda A. Heligon, Winthrop Harbor, Ill.
Application April 12, 1945, Serial No. 587,911
2 Claims. (Cl. 248—104)



1. A nursing bottle holder comprising a blank forming one-half of a hexagonal having a parallel base and top lines, the triangular end portions of the blank being lap folded upon each other and stitched to form a wide top opening and a restricted V shaped bottom opening, and tapes stitched to the edges of the top opening for reinforcing the same, the free ends of said tapes being adapted to fasten the holder to a crib.

2,462,188
RADIO DIRECTION FINDER
Roswell H. Herrick, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 4, 1943, Serial No. 504,985
21 Claims. (Cl. 343—120)



1. In a radio direction finder utilizing a plurality of loop antennas the method comprising receiving energy with a pair of loop antennas in spaced apart parallel planes, differentially combining energy received by said antennas to produce a resultant voltage, receiving energy from another loop spaced between and parallel to said first loops to produce a voltage, combining said resultant voltage with said latter voltage, periodically reversing the phase of one of the voltages so combined, amplifying said combined voltages, deriving from said amplified voltages direct currents proportional thereto, comparing the direct currents derived from said two different combined amplified voltages, and producing an indication in accordance with said compared voltages.

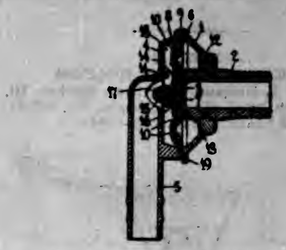
2,462,189
VALVE FOR WINDSHIELD CLEANERS
Willis C. Horn, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y., a corporation of New York
Application October 31, 1945, Serial No. 625,966
1 Claim. (Cl. 251—144)

plurality of strands of insulated conductor onto the tube at spaced intervals along the tube to pro-

2,462,192
MOTOR SHAFT
Erwin C. Horton, Hamburg, and Earl V. Schaal, Buffalo, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y., a corporation of New York
Application October 31, 1945, Serial No. 625,967
1 Claim. (Cl. 308—237)

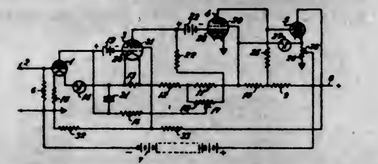
2,462,194
PROCESS FOR THE SIMULTANEOUS PRODUCTION OF CHLORINE DIOXIDE AND NITROGEN TRICHLORIDE

2,462,189
VALVE FOR WINDSHIELD CLEANERS
Willis C. Hess, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application May 25, 1944, Serial No. 537,266
3 Claims. (Cl. 251—119)



1. A valve comprising complemental casing sections, one of said sections having a seat, a one-piece molded rubbery body having a valve engageable with the seat and a relatively thin encircling web with a margin clampingly embraced by the sections, said valve being molded with a stem on its back, and a backing disc having a central opening through which the stem is stretched to anchor the disc under tension, the web being arched up about the disc and supporting the valve substantially in the plane of the margin.

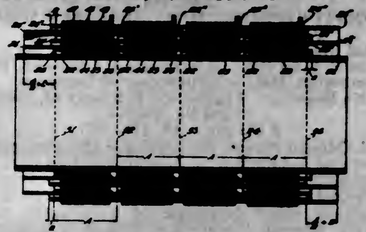
2,462,190
AMPLIFIER FOR SMALL DIRECT CURRENTS
John A. Hipple, Jr., Verona, and Donald J. Grove, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1945, Serial No. 582,936
5 Claims. (Cl. 179—171)



1. In combination with an amplifier input electrical discharge tube of a grid-controlled type in which the grid current varies at a comparatively high rate with changes in grid voltage, a negative feedback circuit between the output of said amplifier and the control electrode of said tube adjusted to give an overall voltage amplification of the order of unity for said amplifier, means for impressing on said grid such a bias voltage as makes said grid current zero, and current responsive means in the output circuit of said amplifier.

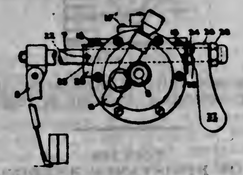
2,462,191
METHOD OF WINDING COILS
John K. Hodnette and Allan D. Forbes, Sharon, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 15, 1946, Serial No. 641,399
5 Claims. (Cl. 242—10)

1. The method of simultaneously winding a plurality of winding coils comprising rotating a hollow tube of insulating material forming the support for the winding conductors, feeding a plurality of strands of insulated conductor onto the tube at spaced intervals along the tube to provide several groups of conductor winding turns corresponding to the several coils and providing a layer of conductor turns for each group, the sequence of winding turns providing a layer for each group extending in the same direction along the insulating tube, in applying at least one layer of a sheet of flexible insulating material extending across the several groups of conductor winding turns about the layer of winding turns by feeding a wide sheet of insulating material having a width greater than the width of the several coils together with a plurality of strips of insulating material corresponding to the number of coils being wound, each strip having a width less than the width of the coil when finished, the several strips being spaced in the direction of the axis of the coils distances corresponding to the lengths of the finished coils, the wide sheet together with the plurality of narrow sheets being so applied about the groups of winding turns that the major portion of the narrow strips are positioned to the side of the center of the group of winding turns on which the first wound turns of the layer of winding turns were wound, in winding a second layer of conductor winding turns for each group about said insulating material, the turns in the second layer being applied in sequence in the opposite direction from the sequence of winding turns in the first layer, in applying at least one



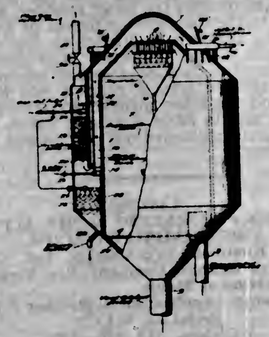
layer of sheet of flexible insulating material extending across the several groups of conductor turns about the second layer of winding turns by feeding a wide sheet of insulating material having a width greater than the width of the several coils together with a plurality of strips of insulating material corresponding to the number of coils being wound, each strip having a width less than the width of the coil when finished, the several strips being spaced in the direction of the axis of the coils distances corresponding to the lengths of the finished coils, the wide sheet together with the plurality of narrow sheets being so applied about the groups of winding turns that the major portion of the narrow strips are positioned to the side of the center of the group of winding turns on which the first wound turns of the layer of winding turns were wound, and in continuing winding successive layers of winding turns, layer upon layer, in each group of winding turns with the sequence of the successive turns in each layer proceeding in the opposite direction along the length of the group of turns from the sequence of turns in the next previous layer until the desired number of layers of turns is completed, and in applying at least one layer of a sheet of insulating material across the several groups of conductor turns about each layer of conductor turns in the several groups of layers of turns, and in thereafter cutting the tube of insulating material and the layers of flexible insulating material to separate the several groups of turns into separate coils.

2,462,192
MOTOR SHAFT
Erwin C. Horten, Hamburg, and Earl V. Schaal, East Aurora, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application July 12, 1944, Serial No. 544,766
5 Claims. (Cl. 64—1)



1. A motor having a casing, an oscillatory shaft of tubular form journaled at its opposite ends in the casing, a second shaft received within the tubular shaft, a shoulder on the second shaft interlocking in a recess in one end of the tubular shaft and detachable therefrom by and upon relative axial movement between the shafts in one direction, means spaced from the shoulder and interlockingly connecting the second shaft to the tubular shaft by and upon opposite relative movement therebetween, and means common to both interlocks for concurrently making them effective.

2,462,193
CATALYST REGENERATOR AND RECOVERY APPARATUS
William E. Huisberg, Hinsdale, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application April 9, 1945, Serial No. 587,251
6 Claims. (Cl. 23—288)



1. An apparatus of the class described comprising in combination an inner chamber, an outer chamber spaced from said inner chamber, means dividing the space between said chambers into two annular zones communicating at their lower ends, a cyclone separator in the upper portion of said inner chamber and communicating with the upper end of the inner one of said annular zones, cooling means in the inner annular zone, contact means in the outer one of said annular zones, an inlet to the outer annular zone above said contact means, an outlet from the upper portion of the outer annular zone, and a reservoir between said inner and outer chambers below said annular zones.

2,462,194
PROCESS FOR THE SIMULTANEOUS PRODUCTION OF CHLORINE DIOXIDE AND NITROGEN TRICHLORIDE
Willis S. Hutchinson, St. Paul, Minn., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application October 21, 1944, Serial No. 559,845
6 Claims. (Cl. 252—187)

1. A process for the simultaneous generation of chlorine dioxide and nitrogen trichloride which comprises bringing hydrogen chloride into contact in a reaction zone with a chlorate radical and an ammonium radical provided by a reaction mass of the group of water-soluble salts consisting of (a) ammonium chlorate and (b) a mixture of an ammonium compound and a chlorate, a sufficient amount of moisture being present to effect the reaction, and withdrawing from the reaction zone a gaseous mixture of chlorine dioxide and nitrogen trichloride.

2,462,195
MATERNITY PANTY GARMENT
Hamac W. Jacobson, Minneapolis, Minn., assignor to Kickernick, Inc., Minneapolis, Minn., a corporation of Minnesota
Application April 15, 1948, Serial No. 21,168
3 Claims. (Cl. 2—224)

1. A maternity panty garment comprising a seat and back portion, side portions and a front panel for covering the central portion of the abdomen of the wearer, said front panel being formed from two longitudinal sections of material of substantially greater length than the back portion of the garment to provide longitudinal fullness and having joined longitudinal edges at the front of the garment, at least the side edges of said sections opposite said joined front edges being generally convexly curved throughout their lengths to form diminished top and bottom end portions and provide, when joined, additional lateral fullness in the abdominal portion of the garment, and a plurality of spaced, highly elastic elements connected with said front panel in the form of substantially upward curved concentric arcs to resiliently shirr the excess material in the front panel of the garment, both downwardly and laterally to lightly embrace the body of the wearer at all times.

3. A maternity panty garment comprising a back portion, side portions, and a central front panel substantially longer than said back portion and having the side edges thereof connected with said side portions and having additional lateral fullness in the central portion thereof, said garment having a pair of leg openings and a trunk opening, a plurality of spaced highly elastic elements connected with said front panel in the form of substantially upwardly curved concentric arcs to resiliently draw the excess material provided in the front portion of the garment together both downwardly and laterally to lightly embrace the body of the wearer at all times.

2,462,196
PROTECTIVE PHOSPHATE COATINGS FOR METAL SURFACES
Frank Hyman, Detroit, Mich., assignor to Parker Rust Proof Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application December 31, 1945, Serial No. 638,181
6 Claims. (Cl. 148—6.15)

rigidly to said valve and having means serving as a narrow slot receiving said angled section

admixing them, thereafter reacting the resultant mixture with sodium sulfide in aqueous solution by admixing and heating to a temperature of

2,462,202
HEAT TREATING
James Knivsten, Wyncote, Pa., assignor to Seiss Corporation of America, a corporation of Penn-

2,462,196
PROTECTIVE PHOSPHATE COATINGS FOR METAL SURFACES
George W. Jernstedt, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application July 29, 1943, Serial No. 496,619
6 Claims. (Cl. 148—6.15)

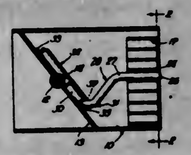
4. In the process of treating ferrous, zinc and cadmium metal surfaces, to provide corrosion resisting coatings thereon, the steps comprising, applying to the metal surface an aqueous solution consisting essentially of from 0.1% to 2% of ortho-disodium phosphate and from 0.001% to 0.1% of zirconium present as a water soluble compound, the ortho-disodium phosphate and the zirconium compound having been previously combined by dissolving them in water and evaporating to dryness, and the balance being water, to provide for activating the metal surface, and thereafter applying to the activated metal surface a solution comprising phosphoric acid, phosphates and an oxidizing agent to produce a phosphate coating thereon.

2,462,197
ETCHING METHOD
George W. Jernstedt, Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 27, 1944, Serial No. 555,979
4 Claims. (Cl. 204—141)

1. The method of electroetching the surface of a copper base alloy member containing at least 60% copper comprising making the member the anode in an electrical circuit, applying to the surface of the member an aqueous electrolyte having as its essential ingredients from 20% to 85% by weight of phosphoric acid, from 25% to 0.1% by weight of nitric acid and the balance water, and passing an electrical current through the circuit including the member and the aqueous electrolyte to etch the surface of the member to produce a substantially uniform microscopic roughening and pitting of the surface to enable organic finishes to adhere more tenaciously.

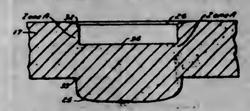
2,462,198
THERMOSTATIC VALVE
Roger C. Johnson, Moline, Ill.
Original application July 1, 1940, Serial No. 343,479. Divided and this application April 1, 1944, Serial No. 529,139
20 Claims. (Cl. 236—34)

1. A thermostatically controlled valve unit comprising a casing, a valve of a butterfly type pivotally mounted therein to control the fluid flow therethrough, a thermostatic coil axially arranged in said casing, an axially extending member fixed at one to said coil to be rotated thereby, said member having an angled section at the other end extending generally parallel to the face of the valve, and a member fixed rigidly to said valve and having means serving as a narrow slot receiving said angled section



for causing said valve to pivot about its axis as the axially extending member is rocked about its axis.

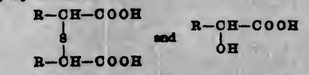
2,462,199
METHOD OF RESISTANCE WELDING USING PARTIALLY SHEARED OUT PROJECTIONS
Joseph W. Kehoe, Wilkinsburg, and Joseph B. Dyn, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 14, 1944, Serial No. 531,040
5 Claims. (Cl. 219—10)



1. The method of projection welding a pair of metallic members together which comprises, forming a projection on one of the members by moving a core of metal relative to the body of the member and reducing the area of contact therebetween by partially shearing a substantially cylindrical core of uniform cross section out of the member by a punching operation, positioning said one member with the projection in engagement with the other member, applying pressure to the members by means of a current conducting electrode positioned on the member at the rear of the projection, and passing an electric current through the said one member, and the reduced area of contact into the projection and the other member so as to produce sufficient heat to effect a zone of fusion including the partially sheared out portion and both of the members.

2,462,200
PROCESS FOR MAKING ALPHA, ALPHA'-THIODIALIPHATIC ACIDS
Milton P. Kleinholz, East Chicago, Ind., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 6, 1945, Serial No. 614,817
7 Claims. (Cl. 260—299)

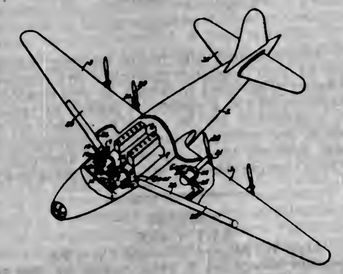
1. A process for producing mixtures of alpha, alpha'-thiodialiphatic acids and alpha-hydroxy aliphatic acids of the types represented respectively by the formulae



where R is an alkyl group, which comprises reacting an alpha-brominated fatty acid of the group consisting of stearic acid, palmitic acid, myristic acid and lauric acid, and mixtures thereof, in solution in an organic solvent of the group consisting of benzol and methanol, with potassium hydroxide by intimately

admixing them, thereafter reacting the resultant mixture with sodium sulfide in aqueous solution by admixing and heating to a temperature of 155–200° F., acidifying the mixture, settling to permit the formation of an organic layer containing the desired reaction product and an aqueous layer, separating the two layers and distilling off the organic solvents from the former.

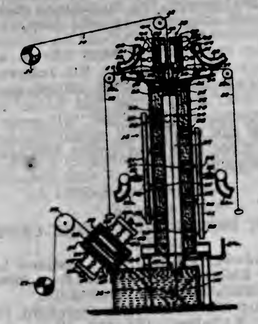
2,462,201
ELECTRICAL AIRPLANE PROPULSION
Lee A. Kilgore, Forest Hills, Frank W. Godsey, Jr., Wilkinsburg, Bennie A. Rose, Forest Hills, and Frank B. Powers, Pittsburgh 16, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 2, 1943, Serial No. 474,474
11 Claims. (Cl. 244—60)



7. Electrical propulsion-equipment for a multi-propellered aircraft, comprising one or a small number of polyphase synchronous generators and driving-means therefor, said generator or generators having a speed in the range from about 10,000 to about 20,000 revolutions per minute and having a pole-number in the range between 4 and 8, inclusive, a plurality of polyphase propeller-driving motors, located close to their respective propeller-shafts and operating at substantially synchronous speeds for driving a plurality of said propeller-shafts, said generators and motors being of a light-weight construction, each weighing a fraction of a pound per horsepower, there being a larger number of motors than generators, and a common polyphase supply-bus, energized from said generator or generators, for energizing all of said plurality of propeller-driving motors.

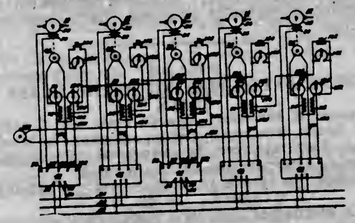
8. Electrical propulsion-equipment for a multi-propellered aircraft, comprising one or a small number of polyphase synchronous generators and driving-means therefor, a plurality of polyphase propeller-driving motors, located close to their respective propeller-shafts and operating at substantially synchronous speeds for driving a plurality of said propeller-shafts, said generators and motors being of a light-weight construction, each weighing a fraction of a pound per horsepower, there being a larger number of motors than generators, a polyphase supply-bus, energized from said generator or generators, for energizing a plurality of said propeller-driving motors, and electric power-line attachment means, adapted to be connected to said bus, whereby an additional external source of power may be temporarily connected to the bus during take-off.

2,462,202
HEAT TREATING
James Knivsten, Wyncote, Pa., assignor to Selas Corporation of America, a corporation of Pennsylvania
Application January 29, 1944, Serial No. 520,271
7 Claims. (Cl. 148—13)



7. Apparatus for heat treating a continuous length of metallic work moving through a vertical path comprising a furnace having a chamber surrounding said work as it moves through said path, heating means located in said furnace to heat said work, an auxiliary heater mounted upon said furnace and having a chamber surrounding said work prior to the time it reaches said furnace chamber, said heater being formed of a plurality of separable parts located on opposite sides of said work, the chambers of said heater and said furnace being entirely separated, heating means located in the chamber of said heater operable to produce a higher thermal head than the heating means located in said furnace chamber, and means to move said parts of said heater toward and from said work to thereby vary the heating effect of said heater.

2,462,203
SPEED REGULATING SYSTEM
Joseph F. Kovalsky, Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 30, 1947, Serial No. 783,099
14 Claims. (Cl. 318—71)



1. In a system for regulating the relative speeds of a plurality of drive motors each of which is provided with a field winding, the combination comprising, an electronic regulator for each of the motors disposed for operation to control the field excitation of the associated motor, a plurality of sources of voltage each of which constitutes a measure of the speed of one of the motors, a plurality of impedance means for pro-

viding a plurality of reference voltages, each of the reference voltages cooperating with one of the speed measuring voltages to provide a pair of opposed control voltages for controlling the operation of one of the electronic regulators,

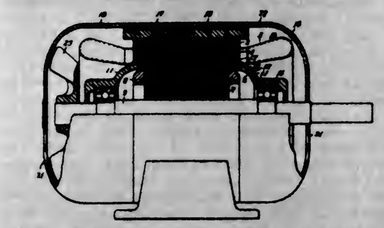
perature sufficient to cause the sections to soften and the disc to move downwardly under its own weight and that of the section resting upon it, the surface of the disc becoming oxidized during the heating, guiding the disc in its downward move-

2,462,207
TEMPERATURE REGULATING SYSTEM
Clarence L. Mershon, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

the main diameter of said device, and narrow grooves extending from the interior of said device into each of said flutes, said grooves extending outwardly beyond the main diameter of said device, said flutes extending upwardly over the tapered portion, and an enlarged laterally extend-

viding a plurality of reference voltages, each of the reference voltages cooperating with one of the speed measuring voltages to provide a pair of opposed control voltages for controlling the operation of one of the electronic regulators, and means for individually adjusting each of the impedance means to adjust the reference voltage supplied thereby, the impedance means being progressively connected to one another from a given reference source whereby an adjustment of one of the impedance means effects an automatic progressive change in the reference voltages supplied by the other impedance means in a direction away from the given reference source without affecting the reference voltage supplied by the impedance means connected between the given reference source and said one of the impedance means.

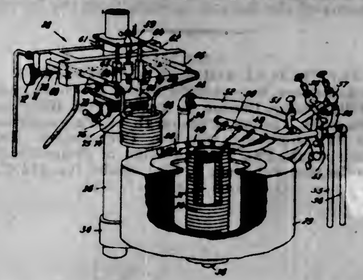
2,462,204
ELECTRIC MOTOR WITH BORE-CENTERED BEARINGS
Leon R. Ludwig, Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 20, 1947, Serial No. 735,837
8 Claims. (Cl. 172—36)



1. A dynamo-electric machine comprising: a stator core-member having a cylindrical airgap-bore and stator-windings having end-turns extending out of each end of the stator core-member in closely spaced relation to the bore; a rotor-member rotatably mounted within the stator-bore, said rotor-member including a shaft; and a machine-enclosing, imperforate, bracket disposed at each end of the machine, each bracket having a continuous, substantially air-tight engagement with its end of the stator core-member adjacent to the airgap-bore, so as to enclose the airgap and the rotor-member but not the stator-windings, and each bracket further carrying a centrally disposed shaft-supporting bearing.

2,462,205
METHOD FOR MAKING METAL-GLASS SEALS
Raymond R. Machlett, New Canaan, and Gottfrid W. Steen, Stamford, Conn., assignors to Machlett Laboratories, Incorporated, Springdale, Conn., a corporation of Connecticut
Application March 19, 1945, Serial No. 583,462
2 Claims. (Cl. 49—81)

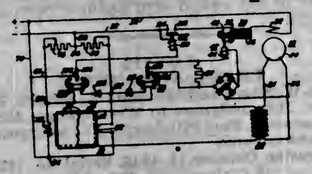
1. A method of making a metal-glass structure consisting of cylindrical sections of glass and annular metallic discs arranged in alternation and sealed together in axial alignment, which comprises supporting a glass section with a disc resting upon the section and a second glass section resting upon the disc, the glass sections and disc being in axial alignment, heating the sections and disc by flames directed upon the outer and inner surfaces of the sections and disc to a temperature sufficient to cause the sections to soften and the disc to move downwardly under its own weight and that of the section resting upon it, the surface of the disc becoming oxidized during the heating, guiding the disc in its downward movement, arresting the downward travel of the disc after it is moved through a predetermined distance, discontinuing the flame heating, heating the disc by high frequency induction to a temperature higher than that to which it was heated by the flames and for a sufficient length of time to insure absorption in the glass of oxides on the surface of the metal, discontinuing the induction heating, heating the glass sections and disc by flame to a temperature at which the glass is soft,



2,462,206
KEY CASE
Alan W. Magee, Elwood City, Pa.
Application November 3, 1945, Serial No. 626,528
2 Claims. (Cl. 150—46)

1. A key case of the class described, comprising a key containing and jacketing sheath comprising a single piece of pliable sheet material of general rectangular form folded upon itself longitudinally intermediate its ends to define opposed side walls, corresponding end-portions of said side walls being folded and then tucked inwardly into opposing contact between said side walls and forming a double-ply tab, a key hinging and retaining rivet piercing the tab, the rivet having headed ends and said headed ends terminating at points wholly within the confines of the sheath, standard-type apertured keys having their apertured ends fitting against opposite faces of the tab, the apertured ends being mounted on the headed ends of said rivet, a spring metal key embracing and clamping clip comprising a V-shaped bight portion providing a crotch for reception of coacting portions of the keys, and further including spaced parallel limbs, said limbs terminating at their free ends in split eyes, said eyes being releasably fastened on the headed end-portions of said rivet whereby said clip serves to assemble and hold the keys in place, and also serves to resiliently clamp the keys in both retracted and projected positions.

2,462,207
TEMPERATURE REGULATING SYSTEM
Clarence L. Mershon, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 23, 1947, Serial No. 750,904
5 Claims. (Cl. 219—20)

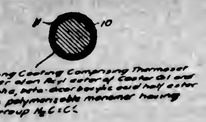


3. In a system for regulating the temperature of a window having a resistor heating element associated therewith, in combination, a generator connected to be operated to deliver current to the resistor heating element, a field winding for the generator, a rheostat connected in circuit relation with the field winding and disposed to be operated to control the excitation of the generator, a relay having a winding disposed to be energized in response to the operation of the generator to control the operation of the rheostat, a resistor connected in circuit relation with the relay winding, a resistance bridge circuit having a resistor disposed in juxtaposition to the window, said juxtaposed resistor having a high temperature coefficient of resistance whereby the resistance varies as the temperature of the window varies to give a directional output from the bridge circuit as the temperature of the window departs from a predetermined value, a polarized relay disposed to be energized from the bridge circuit as the temperature of the window is decreased below the predetermined value to connect at least a part of the relay resistor in circuit with the relay winding, and another polarized relay disposed to be energized from the bridge circuit as the temperature of the window increases above the predetermined value to effect an interruption of the field winding circuit of the generator.

2,462,208
FINGER COT
Walter Meyer, Chicago, Ill., assignor to Myron T. Cole, Chicago, Ill., doing business as M. T. Cole Co.
Application July 11, 1945, Serial No. 604,437
1 Claim. (Cl. 294—25)

As an article of manufacture, a finger tip device of generally rounded cross section formed of readily elastic rubber like material, said device comprising an elongated hollow member freely open at one end and provided at its opposite end with a tapered integral portion, the exterior of the device being shaped with roughening members, there being a plurality of outwardly extending narrow flutes formed integrally in said device and extending substantially from end to end thereof, said flutes extending outwardly beyond the main diameter of said device, and narrow grooves extending from the interior of said device into each of said flutes, said grooves extending outwardly beyond the main diameter of said device, said flutes extending upwardly over the tapered portion, and an enlarged laterally extending bead formed about the open end of said device, said grooves occupying not more than twenty per cent of the circumference of said device.

2,462,209
RESINS AND CONDUCTORS INSULATED THEREWITH
Herbert F. Minter, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1945, Serial No. 592,406
13 Claims. (Cl. 174—121)



1. A composition composed of the reaction product of castor oil with both an acyl halide having from 6 to 20 carbon atoms and an alpha, beta-olefinic dicarboxylic acid, the acyl halide and alpha, beta-olefinic dicarboxylic acid esterifying the major proportion of the hydroxyl groups of the castor oil, the castor oil and alpha, beta-olefinic dicarboxylic acid being reacted to produce only the acid half ester with at least one hydroxyl group on the average per castor oil molecule.

12. In combination, an electrical conductor and insulation applied to the electrical conductor, the insulation composed of the resinous body produced by interpolymerizing of castor oil with both an acyl chloride having from 6 to 20 carbon atoms and an alpha, beta-olefinic dicarboxylic acid anhydride, the acyl chloride and alpha, beta-olefinic dicarboxylic acid anhydride esterifying substantially all of the hydroxyl groups of the castor oil, the alpha, beta-olefinic dicarboxylic acid anhydride being so reacted with the castor oil as to produce substantially only the acid half ester, and a reactable solvent for the reaction product, the solvent being composed of a liquid polymerizable monomer having the group $H_2C=C<$, and a reactable solvent for the reaction product, the solvent being a liquid polymerizable monomer having the group $H_2C=C<$, the mols of the solvent being from 5 to 95 for each 100 mols of combined solvent and reaction product.

2,462,210
STARCH ESTERS
Owen A. Moe, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application May 20, 1945, Serial No. 594,213
3 Claims. (Cl. 260—224)

1. Process of preparing starch esters which comprises contacting starch with aqueous formic acid containing from 40% to 85% formic acid to produce a starch formate having a formyl content of from 5% to 20%, precipitating and separating the starch formate from the reaction mixture, and esterifying the starch formate with an organic acylating agent in which the acyl group has at least three carbon atoms.

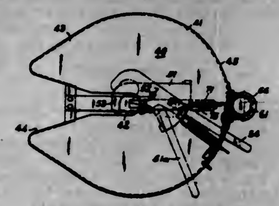
2,462,211
TRACTOR FIFTH-WHEEL SAFETY LOCK
Clyde L. Moore, Cleveland, Ohio
Application February 24, 1947, Serial No. 730,393
5 Claims. (Cl. 280—33.05)

to release said control means, a first normally open shunt circuit around the thermostat only, a first shunt switch in said first shunt circuit responsive to the switch-arm-releasing action of the solenoid, a second shunt circuit around both

ber and equipped with a rear plate and a hub extending rearwardly from the plate, a hollow shaft for said impeller mounted for rotation within said pump structure and receiving the hub of said impeller plate, means fixed to said shaft

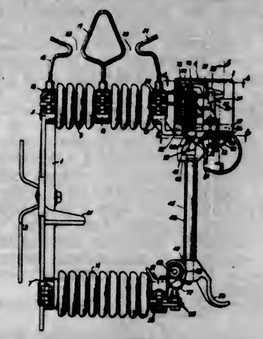
which is many times less than that of the float, extending upwardly therefrom above the surface of the liquid, an indicator float at the surface of the liquid and means interposed between the floats to cause relative displacement thereof in the plane

2,462,211
TRACTOR FIFTH-WHEEL SAFETY LOCK
Clyde L. Moore, Cleveland, Ohio
Application February 24, 1947, Serial No. 730,293
5 Claims. (Cl. 280—33.65)



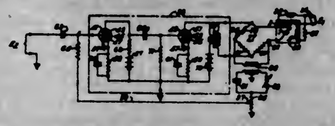
1. In an articulated vehicle, a safety coupler, comprising in combination, a fifth-wheel having a socket, a plate member having a king-pin engageable by the socket and an arcuate slot therein, a snatch-hitch mounted on the fifth-wheel engageable with the king-pin, and a safety-lock mounted on the fifth-wheel and including a trigger means capable of being actuated by the king-pin when the latter is unintentionally disengaged from the snatch-hitch and a bolt mechanism connected to the trigger means engageable by the arcuate slot when the said trigger means is actuated.

2,462,212
PROTECTIVE SWITCH
Carl E. Mosley, Overland, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a corporation of Missouri
Application November 6, 1944, Serial No. 562,096
2 Claims. (Cl. 200—88)



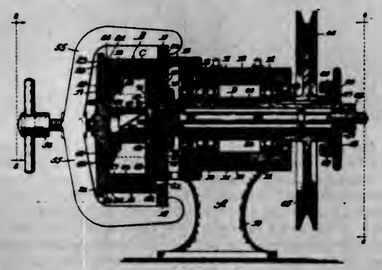
1. An electrical protective switch comprising a switch arm biased toward an open-circuit position, control means adapted at one position to hold said switch arm against said bias and in a closed-circuit position and at another position to release the switch for biased movement to said open-circuit position, a thermostat operatively connected with said control means in series with the switch arm when the latter is in closed-circuit position and adapted in response to current flowing through the switch arm to heat and cause said release, a solenoid operatively connected with the control means and also connected in series with said switch arm when the latter is in closed-circuit position and responsive to current to release said control means, a first normally open shunt circuit around the thermostat only, a first shunt switch in said first shunt circuit responsive to the switch-arm-releasing action of the solenoid, a second shunt circuit around both the thermostat and the solenoid, and a second shunt switch in said second shunt circuit responsive to initial opening action of the switch arm to close as the switch arm assumes open-circuit positions.

2,462,213
PHASE ANGLE METER
George W. Nagel and Mortimer A. Schultz, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 12, 1946, Serial No. 703,058
10 Claims. (Cl. 172—245)



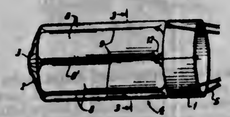
2. In a device responsive to the phase displacement between two alternating electrical quantities, means effective when energized by a first alternating quantity for producing a rotating magnetic field, a coil, means mounting said coil for rotation relative to said first-named means in said magnetic field, means responsive to a second alternating quantity for rotating the coil towards a position in the magnetic field determined by the phase relationship between the first and second electrical quantities, said coil having a voltage induced therein by said magnetic field which varies in phase relative to said first alternating quantity in accordance with the position of said coil relative to said first-named means, and means controlled by said voltage for supplying auxiliary alternating energy to said coil.

2,462,214
ROTARY PUMP WITH EASILY REMOVABLE ROTOR
Carl A. Namur, Kenosha, Wis., assignor to Specialty Brass Company, Incorporated, Kenosha, Wis., a corporation of Wisconsin
Substituted for abandoned application Serial No. 373,358, January 6, 1941. This application June 7, 1945, Serial No. 598,059
5 Claims. (Cl. 103—205)



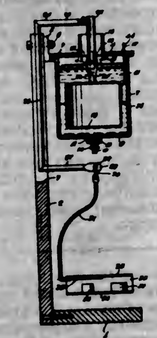
1. In a pump structure providing an impeller chamber, a pump impeller mounted in said chamber and equipped with a rear plate and a hub extending rearwardly from the plate, a hollow shaft for said impeller mounted for rotation within said pump structure and receiving the hub of said impeller plate, means fixed to said shaft for rotating the same, said hollow shaft being provided at its rear end with an outwardly-extending retainer flange, a rod received within said hollow shaft and fixed to said impeller plate hub, said rod having an outer threaded end, a wheel provided with a groove receiving said flange of the hollow shaft and being provided centrally with a nut receiving the threaded end of said rod, and a closure for said chamber axially aligned with said rod.

2,462,215
COMBINED BAG AND INFLATABLE PILLOW
William Z. Norman and Julius Billig, New York, N. Y., assignors to Bilnor Corp., a corporation of New York
Application September 18, 1946, Serial No. 697,606
6 Claims. (Cl. 5—341)



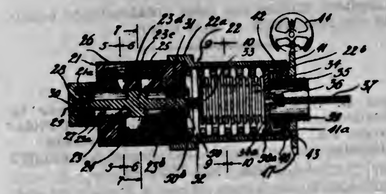
1. A combination hand-carrying bag and inflatable pillow, comprising a flap section open at the top, a bottom closed section, and an intermediate section bonded to both said flap and bottom sections, said intermediate section comprising two thicknesses of sheeting which are bonded together along a plurality of parallel spaced bond lines to thereby provide compartments, said compartments being intercommunicating at their ends, and means for inflating and deflating said compartments.

2,462,216
HYDRAULIC BALANCE
Leon J. Nowak, Jr., Chicago, Ill.
Application December 30, 1944, Serial No. 570,641
6 Claims. (Cl. 265—43)



1. In a hydraulic balance, a reservoir, a body of liquid therein, a master float entirely submerged in the liquid, a stem, the cross sectional area of which is many times less than that of the float, extending upwardly therefrom above the surface of the liquid, an indicator float at the surface of the liquid and means interposed between the floats to cause relative displacement thereof in the plane of the liquid surface in consonance with change in the depth of immersion of the master float, an indicator interposed between the floats to show such relative movement, means for supporting by the stem an object, the weight of which is to be determined, the floats, the stem, the weight supporting means and the indicator being normally out of contact with any part of and being free to move without interference in the reservoir.

2,462,217
VALVE FOR THERMAL SYSTEMS
Orion O. Oaks, Summit, N. J., assignor, by mesne assignments, to Thermal Liquids, Inc., New York, N. Y., a corporation of Delaware
Application July 3, 1945, Serial No. 603,056
1 Claim. (Cl. 236—99)



In a thermostatically actuated valve, a valve body, a centrally disposed chamber in said valve body, inlet and outlet ports communicating with said chamber, a valve member slidably mounted in said chamber and controlling the direction of flow through said ports, a valve stem for actuating said valve member, a thermostatically responsive bellows in engagement with said valve stem, a sealing bellows surrounding said thermostatically responsive bellows and sealed around its open end to said valve body, a plate in engagement with the other end of said sealing bellows, a housing surrounding said sealing bellows and secured to said valve body, the open end of said sealing bellows being sealed to said valve body by said housing, and means for adjusting the position of said plate and of said thermostatically responsive bellows including a threaded hollow stud extending through said housing and secured to said plate, a rotatable adjusting plate threaded upon said stud externally of said housing and a spring surrounding said stud within said housing and engaging said first named plate and said housing.

2,462,218
ELECTRICAL TRANSLATOR AND METHOD OF MAKING IT
Karl M. Olsen, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1945, Serial No. 588,847
9 Claims. (Cl. 175—366)

1. The method of making a translator for electric waves of high frequency which comprises forming a body of silicon material having a small percentage of impurities therein, heat-treating said body to form in the sub-surface thereof a thin layer of said material from which substantially all of said impurities are removed and on the surface a thin layer of material containing

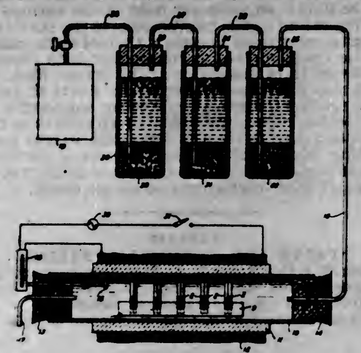
the removed impurities, removing the surface layer, and subjecting said body to a water vapor

casing providing a small expansion chamber, a trap pipe communicating with said expansion chamber extending downwardly below said casing,

its prism structure disposed horizontally, a base structure for stationarily supporting said outer lens, said lens being comprised of groups of com-

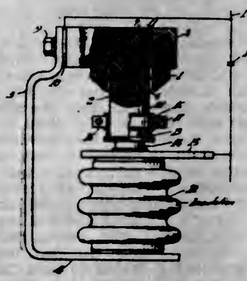
ments; said elements having their peripheries closed except for an annular peripheral discharge opening in said driven element; and said elements having vanes operatively related for the

the removed impurities, removing the surface layer, and subjecting said body to a water vapor



atmosphere during the heat treatment to accelerate the formation of said layers.

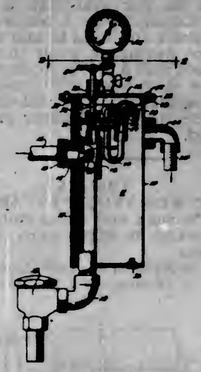
2,462,219
SPARK GAP DEVICE
James B. Owens, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 28, 1945, Serial No. 631,397
3 Claims. (Cl. 175—39)



1. A protective spark gap device adapted to maintain a stable arc and to discharge heavy currents for an appreciable length of time without damage, said spark gap device comprising a massive, generally cup-shaped carbon electrode having a generally cylindrical hollow therein, means for supporting said cup-shaped electrode in inverted position with said hollow opening downwards and open to the atmosphere, a massive generally cylindrical carbon electrode of greater length than the depth of said hollow and of smaller diameter than said hollow, and means for supporting said cylindrical electrode coaxially with the hollow of the cup-shaped electrode and with its upper end extending into the hollow and spaced from the cup-shaped electrode within the hollow to form a spark gap therein.

2,462,220
STEAM TREATING APPARATUS
Royce L. Parker, Addison, Ill.
Application February 23, 1946, Serial No. 649,713
3 Claims. (Cl. 183—39)

1. Apparatus for removing moisture and entrained water droplets from steam, comprising a casing providing a small expansion chamber, a trap pipe communicating with said expansion chamber extending downwardly below said casing, a pipe for conveying steam into said chamber, a screen in said expansion chamber and enveloping the inlet of said supply plant pipe, a conduit ex-



tending upwardly from said expansion chamber, a discharge nozzle connected to said upwardly extending conduit and directed downwardly for discharging steam toward the bottom of the casing, and an outlet pipe for dry steam extending laterally from said casing at right angles to the steam discharged from said nozzle.

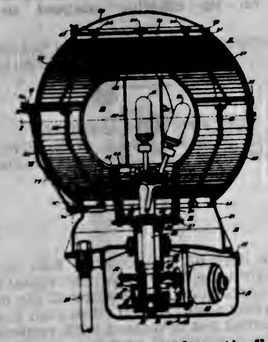
2,462,221
PROCESS FOR THE PRODUCTION OF ACETARYLAMIDES
Edgar Stagg Pemberton, Banstead, England, assignor to British Industrial Solvents, Limited, London, England, a British company
No Drawing. Application September 10, 1946, Serial No. 696,641. In Great Britain September 26, 1945
7 Claims. (Cl. 260—562)

1. A process for the production of acetarylamides which comprises heating an arylamine with an excess of acetic acid not exceeding about 20% by weight of the amount theoretically required in the presence of an amount of a volatile entrainer not exceeding about 5% by weight of the reaction mixture, said volatile entrainer being selected from the group consisting of benzene and toluene, effecting reaction at temperatures between 130° C. and about 200° C. whilst distilling off from the reaction mixture the water of reaction in the form of a binary mixture with said entrainer, condensing the distillate, separating the said entrainer therefrom, returning separated entrainer to the reaction mixture and finally distilling off the said entrainer by distillation under substantially atmospheric pressure and distilling off excess of unreacted acetic acid under subatmospheric pressure.

2,462,222
BEACON LIGHT
Willis A. Pennew, Cleveland, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 19, 1943, Serial No. 499,243
5 Claims. (Cl. 240—1.2)

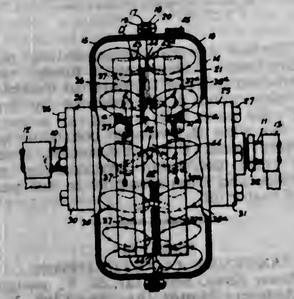
1. A rotating beacon light comprising, an outer Fresnel lens of generally globular shape having

its prism structure disposed horizontally, a base structure for stationarily supporting said outer lens, said lens being comprised of groups of complementary upper and lower lens segments, means comprising upper and center ring members and tie rods interposed between the upper and center ring members and the center ring member and base structure for retaining said lens segments in assembled relation, an inner Fresnel lens of generally globular shape having



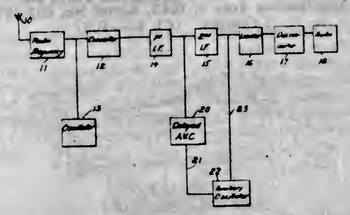
its prism structure disposed vertically, support means mounted on the base structure for rotatably supporting the inner lens within and centrally of the outer lens, said inner lens being comprised of a plurality of complementary lens segments, means comprising an upper ring member and a plurality of tie rods interposed between said ring member and the support means for retaining said lens segments in assembled relation, and a means mounted upon the support means for mounting a light source within the inner lens.

2,462,223
TURBINE PUMP TYPE HYDRAULIC COUPLING
Gust W. Peterson, Los Angeles, Calif.
Application April 13, 1946, Serial No. 662,014
8 Claims. (Cl. 60—54)



1. A fluid coupling comprising: a liquid-containing chamber; co-axially arranged and rotatably mounted driving and driven elements, one of which is composed of axially spaced sections between which the other element is interposed, with the peripheral portions of the elements and the outer sides of said sections spaced from the wall of said chamber to provide an unobstructed annular liquid-circulating space around the elements; said elements having their peripheries closed except for an annular peripheral discharge opening in said driven element; and said elements having vanes operatively related for the vanes of the driving element to draw liquid therefrom into said liquid-circulating space and force the liquid into opposite sides of the driven element so as to develop a torque-reaction upon the vanes thereof and then discharge therefrom through said opening into said liquid-circulating space for recirculation by the driving element.

2,462,224
NOISE REDUCING RADIO RECEIVER
Charles J. B. Rheams, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 2, 1944, Serial No. 552,543
1 Claim. (Cl. 250—20)



In a frequency modulation receiver of the type comprising a carrier frequency signal transmission circuit, a carrier signal amplitude limiter stage, and a frequency detector stage having a different response band than the limiter stage, the improvement which comprises, in combination, a high frequency signal generator, the generated signal from which is applied, together with the carrier frequency signal from the signal transmission circuit, to the input circuit of said amplitude limiter stage, the frequency of said generated signal lying within the response band of said amplitude limiter stage but without the response band of said frequency detector stage, an automatic volume control circuit coupled to said transmission circuit for developing a control voltage the magnitude of which is dependent upon the amplitude of the carrier signal in said transmission circuit, and means for operatively applying said control voltage to said high frequency signal generator in such sense as to lower the output signal thereof as the amplitude of such carrier signal increases.

2,462,225
SAW FILING MACHINE
Arthur R. Roderick, Eagle River, Wis.
Application January 31, 1947, Serial No. 725,578
2 Claims. (Cl. 76—41)

1. In a saw-sharpening machine, a table, clamping means on a longitudinally extending

side of said table adapted to support a saw to be sharpened so that the teeth thereof project upwardly, a frame mounted for reciprocating travel

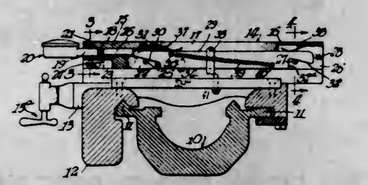
a flat contact end surface and a screw-threaded portion adjacent the flat end surface thereof, the screw-threaded portion of the second conductor

lator members in spaced relation to said supporting member, and means for fixedly securing

extending partially across it and terminating in inwardly spaced relation to one of said end walls and vertically abutting the upper side of a portion of the uppermost cigarette in the case be-

side of said table adapted to support a saw to be sharpened so that the teeth thereof project upwardly, a frame mounted for reciprocating travel on said table, a motor on said frame, a transversely disposed tool arm carried by said frame, a cutting tool, a flexible shaft operatively connecting said tool to said motor, means for attaching said cutting tool to said tool arm in a predetermined position for operation on the teeth of the saw, said attaching means comprising a head on said cutting tool, and a holder provided with a clamp adjustably secured to an end of said tool arm, said clamp embracing said head and secured thereto.

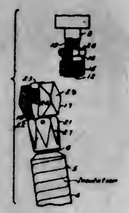
2,462,226
INDICATOR ATTACHMENT FOR MACHINE TOOLS
Albert Rosenow, Evergreen Park, Ill.
Application July 7, 1945, Serial No. 603,657
5 Claims. (Cl. 33—125)



1. An attachment for the slide of a machine tool and embodying therein a supporting means including longitudinally spaced block-like end pieces operatively secured together and each having a downwardly opening longitudinal groove therein, one of said end pieces being adapted to have an indicating mechanism carried thereby, an operating member for said mechanism slidably mounted in said one of said end pieces, a bar having end portions disposed in said grooves in said end pieces and formed with inclined longitudinal surfaces, a pin carried by each end piece and crossing the groove therein and upon which said inclined surfaces of the bar engage, resilient means between said end pieces and said bar respectively for yieldingly holding the inclined surfaces in engagement with said pins, said bar in its normal position having one end thereof engaged with said operating member, resilient means for urging said bar in one direction, and means providing an abutment on said bar and adapted for engagement with a fixed stop on a part of said machine tool upon which said slide, to which said supporting means is attached, is operatively engaged for movement.

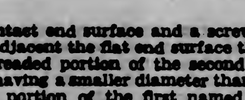
2,462,227
CONNECTOR
Louis E. Sauer, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 12, 1944, Serial No. 558,305
4 Claims. (Cl. 287—117)

1. In a connector for connecting two conductor elements, in combination, a first conductor element to be connected having a flat contact end surface and external screw threads adjacent the flat end surface thereof, a coupling nut having a bore therethrough provided with internal screw-threads adapted to engage the screw-threaded portion of the first conductor element, a second conductor element to be connected also having a flat contact end surface and a screw-threaded portion adjacent the flat end surface thereof, the screw threaded portion of the second conductor element having a smaller diameter than the screw threaded portion of the first named conductor element, a differential nut having a bore therethrough and screw threads on the surface of the bore adapted to engage the screw threads adjacent the end of the second conductor element, the differential nut also having screw threads on its exterior adapted to engage



within the bore of the coupling nut, the screw threads within the bore of the differential nut and the screw threads on the exterior of the differential nut having a differential pitch such that when the differential nut is rotated with respect to the two conductor elements and the coupling nut, a relative movement of the end surfaces of the two conductor elements will be effected to bring them into tight engagement or to separate them as desired.

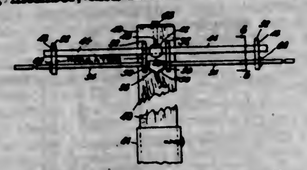
2,462,228
INSULATING MATERIAL
Earl L. Schulman and Robert D. Jerabek, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 24, 1944, Serial No. 537,032
2 Claims. (Cl. 154—2.6)



1. A flexible electrically insulating material comprising mica flakes and a binder therefor composed essentially of 100 parts by weight of extracted pine wood pitch obtained by first extracting pine wood with a coal tar solvent and, second, removing the volatile constituents from said extract and, third, extracting from the residual resin petroleum hydrocarbon soluble components, and from about 60 to 100 parts by weight of castor oil.

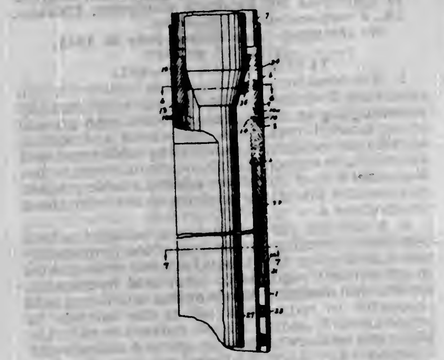
2,462,229
ANTENNA CONSTRUCTION
John Wilson Shur, Sea Cliff, N. Y., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y., a corporation of New York
Application December 29, 1944, Serial No. 570,297
9 Claims. (Cl. 250—33.65)

1. An antenna unit comprising in combination a relatively long supporting member, a series of insulator members attached in spaced relation along said member and rotatably mounted radially with respect to the axis thereof, a long rigid metallic antenna element mounted in said insulator members in spaced relation to said supporting member, and means for fixedly securing



said insulator members to said supporting member at the desired position.

2,462,230
OUTSIDE PIPE CUTTER
William W. Smith, Houston, Tex.
Application January 27, 1947, Serial No. 724,548
4 Claims. (Cl. 164—0.6)



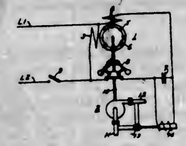
1. An outside pipe cutter comprising, a rotatable body shaped to telescope over a pipe stuck in a well bore, a cutter mounted in the body to rotate on a horizontal axis, a tubular stem mounted in the body, pipe engaging means on the stem engageable with the stuck pipe to hold the stem against rotation as the body rotates, a cutter actuator having a splined connection with the body and a threaded connection with the stem and releasable from the stem upon rotation of the body, said actuator being arranged to engage the cutter and rotate it inwardly into engagement with said pipe upon release and downward movement of the actuator, a sleeve threaded onto the stem and having a splined connection with the body, a compression spring between the sleeve and actuator effective to apply yielding pressure to the actuator and cutter as the sleeve is screwed downwardly on the stem.

2,462,231
CIGARETTE DISPENSING CONTAINER AND LIGHTER
Fred Stein, Bridgeport, Conn.
Application January 1, 1944, Serial No. 516,613
2 Claims. (Cl. 206—41.3)

1. In a combined container and lighter for cigarettes, a case including vertical side and end walls and adapted to contain a plurality of vertically superimposed side by side cigarettes with the ends of said cigarettes substantially in guided engagement with said end walls, a fixed horizontal cigarette guiding abutment wall in said case extending partially across it and terminating in inwardly spaced relation to one of said end walls and vertically abutting the upper side of a portion of the uppermost cigarette in the case between its end to be lighted and a point substantially inwardly spaced from its mouth engaging end, said one end wall having a lateral ejection

passage in lateral alignment with the end of said uppermost cigarette and a cigarette receiving lighter compartment vertically offset above said ejection passage and vertically continuous therewith, and a lighter unit vertically above said abutment wall and disposed in lateral alignment with said cigarette receiving lighter compartment.

2,462,232
CONTROL MEANS
Joseph M. Stein, Irwin, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 8, 1946, Serial No. 675,339
6 Claims. (Cl. 230—22)



1. In combination, a single-phase induction motor having a main primary winding, an auxiliary primary winding, a capacitor connected in series with said auxiliary primary winding, means for opening the circuit of the auxiliary primary winding and capacitor when the motor reaches a predetermined speed, a device to be actuated during starting of the motor, said device including a solenoid for effecting actuation of the device, and means for energizing said solenoid in response to the voltage across said capacitor.

2,462,233
MOTOR CONTROL SYSTEM
Glenn E. Stoltz, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 30, 1947, Serial No. 758,195
13 Claims. (Cl. 318—7)

13. In a control system for a reel motor for use with a reel, generator means connected to supply electrical energy to the reel motor, regulating means normally controlling the supply of electrical energy in accordance with a predetermined pattern and the load on the motor, control means responsive to the diameter of the coil on the reel, an inertia compensation generator connected to vary the control of the regulating means in opposite sense from normal during acceleration and

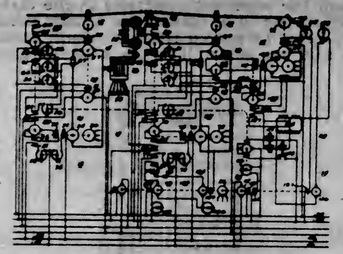
deceleration, and additional control means operable in response to operation of said control means to provide a drooping and then a rising output

said magnet having recesses cut out at one side to release the balls when shifted, means control-

coupled to said rotor and having an outline including a depression, a cam follower normally resiliently supported within said depression, a

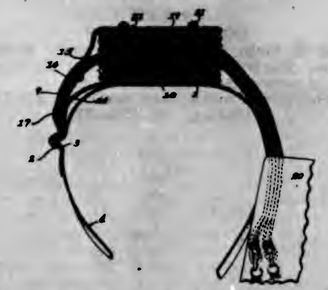
tion and is of leg shaping only in the plane of the panel, said panel being located substantially midway between and inset from the opposite sides of the foot portion, and said ankle portion being

deceleration, and additional control means operable in response to operation of said control means to provide a drooping and then a rising output



curve for the inertia compensation generator conforming to the torque requirements of a reel drive with increasing reel diameter.

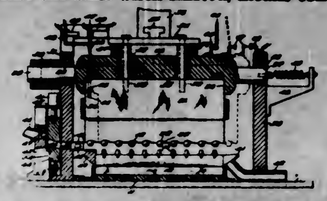
2,462,224
PARACHUTE
Leo E. Supina, Westford, Conn., assignor of one-half to Alfred A. Supina, Stafford Springs, Conn.
Application February 9, 1946, Serial No. 646,659
2 Claims. (Cl. 244—151)



1. In a parachute, a harness, shroud lines, riser webs connected in pairs at one end to said harness at opposite sides thereof and connected at the other ends thereof to said shroud lines, and elastic shock absorbing webs normally shorter than said riser webs connecting said harness to said shrouds and interposed between said pairs of riser web, said riser webs being folded intermediate the ends thereof upon opposite sides of said elastic webs, and pull-apart means connecting the folds of said elastic webs and said riser webs.

2,462,235
MAGNETIC BALL TRANSFER
John A. Swenton, Bristol, Conn.
Application February 14, 1946, Serial No. 647,500
9 Claims. (Cl. 51—74)

1. A magnetic ball transfer including a frame having uprights, a ball holder slidable horizontally therein and normally held in one position and movable to another position, means to move the holder to different positions, electro-magnetic means for holding the same in the other position, means electrically operated for automatically feeding balls singly to receiving position, an electro-magnet carried by said holder, means for raising and lowering said electro-magnet, means for receiving the balls in the different positions, said magnet having recesses cut out at one side to release the balls when shifted, means control-



ling said actuating means, and receiving means for the balls.

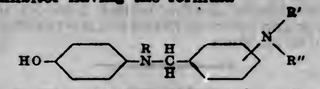
2,462,236
MANUFACTURE OF SILICA HYDROGEL AND CATALYSTS
Charles L. Thomas, Western Springs, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application July 30, 1945, Serial No. 607,903
13 Claims. (Cl. 252—451)

1. A process for producing silica hydrogel which comprises forming an alkaline silica hydrogel by commingling an alkali metal silicate with an acid in an amount required to form said hydrogel in an alkaline medium, commingling additional acid therewith to reduce the pH of the mixture to below about 5, and thereafter adding a basic reagent to raise the pH of the mixture to between about 5 and about 8.

4. A process for producing a catalyst which comprises forming an alkaline silica hydrogel by commingling an alkali metal silicate with an acid in an amount required to form said hydrogel in an alkaline medium, commingling additional acid therewith to reduce the pH of the mixture to below about 5, adding a basic reagent to raise the pH of the mixture to between about 5 and about 8, washing said silica hydrogel to remove alkali metal ions, and thereafter combining said hydrogel with a metal oxide to form a composite having catalytic properties.

2,462,237
STABILIZATION OF ORGANIC COMPOUNDS
Ralph B. Thompson and Joseph A. Chenicek, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application March 29, 1946, Serial No. 658,207
5 Claims. (Cl. 44—75)

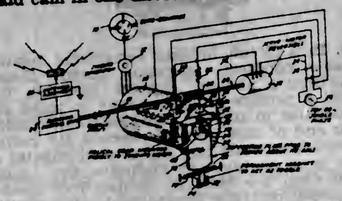
1. A cracked gasoline motor fuel tending to deteriorate in the presence of oxygen containing an inhibitor having the formula



where R, R', and R'' are selected from the group consisting of H and alkyl radicals.

2,462,238
ELECTRICAL SKEVO SYSTEM
Erich J. Uhlig, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 30, 1945, Serial No. 591,864
2 Claims. (Cl. 318—30)

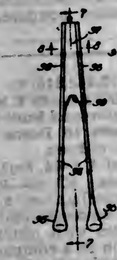
1. The combination of a synchro motor provided with a stator and a rotor, a cam rigidly coupled to said rotor and having an outline including a depression, a cam follower normally resiliently supported within said depression, a reversible motor having a drive shaft for driving a load and a power input circuit including a pair of stationary contacts and a movable contact, a supporting plate forming a support for said movable contact and two arms pivotally connected to each other at one end, one of said arms being secured to said plate and the other of said arms being secured to said cam follower, and means for applying to said plate balanced spring pressure in opposite directions to maintain said plate in a normally centered position, whereby rotation of said cam in one direction brings said movable



contact into engagement with one of said stationary contacts to energize said reversible motor and drive said shaft in one direction, and movement of said cam in the opposite direction brings said movable contact into engagement with the other said stationary contacts to energize said reversible motor and drive said shaft in the opposite direction, and means responsive to the rotation of said shaft for rotating said stator in a direction opposite to that of said cam whereby to return said cam and cam follower to their original relative positions to bring said movable contact out of conductive engagement with either of said stationary contacts.

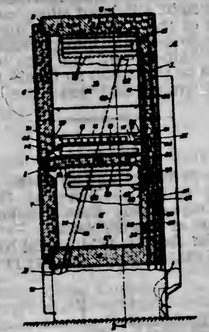
2. The invention as set forth in claim 1 wherein at least a portion of said supporting plate is of magnetic material and a permanent magnet is provided with pole pieces on opposite sides of said portion.

2,462,239
BOOT FORM
George L. Van Dinter, Pomona, Calif., and William E. Austin, Mishawaka, Ind., assignors to Mishawaka Rubber & Woolen Manufacturing Company, Mishawaka, Ind., a corporation of Indiana
Application August 23, 1944, Serial No. 550,714
7 Claims. (Cl. 12—41)



1. A boot making form comprising a foot portion and a leg portion and an ankle portion, the foot portion being fully foot shaped and of substantially greater width than the thickness of the leg portion, the leg portion being a relatively thin panel which extends upwardly from the foot portion and is of leg shaping only in the plane of the panel, said panel being located substantially midway between and inset from the opposite sides of the foot portion, and said ankle portion being between the foot and leg portions and shaped to merge at the bottom into the fully foot shaped foot portion and tapered upwardly at opposite sides to merge at the top into the flat panel.

2,462,240
TWO-TEMPERATURE REFRIGERATOR SYSTEM
Paul D. Van Vliet and Bartell J. Houkes, Galesburg, Ill., assignors to Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application March 21, 1945, Serial No. 583,925
11 Claims. (Cl. 62—4)



1. In a household refrigerator, a condensing unit, an evaporator in fluid circuit therewith, a storage compartment in which said evaporator is positioned, a second evaporator, in series with said first mentioned evaporator, adapted for ice cube freezing, a restricted passage between said evaporators, a shut off valve for said second evaporator adapted, when closed, to prevent the flow of refrigerant through said second evaporator, and bypass means adapted to permit a return flow of refrigerant from said first mentioned evaporator to said condensing unit when said shut off valve is closed.

2,462,241
RADIOACTIVE METAL PRODUCTS AND METHODS OF MAKING SAME
Clarence W. Wallhausen and Harry H. Dooley, Morristown, N. J., assignors to United States Radium Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 26, 1946, Serial No. 712,250
14 Claims. (Cl. 252—301.1)

1. The method of preparing a mixture of metallic gold and a radioactive compound which comprises preparing an aqueous solution of a reducible gold salt and a water-soluble salt of a radioactive element, adding to the solution a substance capable of reducing the gold salt in solution to metallic gold and a substance capable of forming an insoluble compound of the radioactive element thereby forming a mixed precipitate of metallic gold and insoluble radioactive compound, and separating said mixed precipitate from the residual solution.

2,462,242
SILICONE SURFACED COOKING IMPLEMENT
Paul S. Webb and John P. Foster

2,462,244
CIRCUIT BREAKER

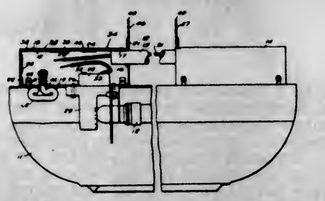
from said rockshafts and connected with the two pistons, the shorter of said arms being connected with the piston in said one cylinder, the latter

tween the barrel and the spear, said trigger means consisting of a rocker and a finger carried by the rocker for engaging a formation on

2,462,242
SILICONE SURFACED COOKING IMPLEMENT
Paul S. Webb and John R. Koster, Boulder City, Nev.
Application April 6, 1948, Serial No. 19,353
3 Claims. (Cl. 220—64)

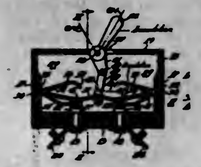
2. A metallic cooking implement having a cooking surface consisting of a very thin film of a permanently viscous, non-thermosetting, high molecular weight alkylated siloxy composition in which most of the silicon atoms are attached to two carbon atoms, said film providing a surface very easily cleaned, and said film being so thin and adhered to the metal so firmly that the silicone is not transferred onto the food cooked thereon.

2,462,243
LUMINAIRE
Frederic C. Winkler and Burton A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1944, Serial No. 545,422
4 Claims. (Cl. 240—51.11)



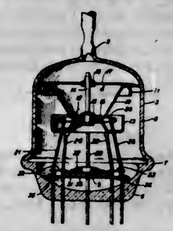
3. A luminaire for use with high wattage electric discharge lamps of the tubular type comprising, a pair of spaced housings having open sides and top and bottom openings, a U-shaped cover for each housing detachably secured thereto and normally covering said side and top openings, said cover being movable to expose and give access to said openings, a lamp holder attached to the bottom of each housing with its terminal portion extending through the bottom opening into the housing and its lamp supporting portion extending therebelow for supporting the lamp beneath the housings, a continuous tubular member rigidly interconnecting said housings and terminating therein adjacent their top portions, said tubular member, being exposed to the atmosphere throughout its length between the housings and functioning both as a rigid connection for the housings and as an exposed wireway for the electrical wiring, an inverted trough-shaped reflector, and means carried by the housings for detachably securing the reflector thereto, said reflector having spaced openings therein through which the lamp supporting portions of the lamp holders extend and having its top surface spaced from the exposed tubular wireway between the housings, thereby to provide for thermally insulating the wireway from the reflector and lamp.

2,462,244
CIRCUIT BREAKER
Ernest G. Wipe, Chicago, Ill., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 16, 1944, Serial No. 563,641
18 Claims. (Cl. 200—113)



18. In a circuit breaker comprising relatively movable contacts, operating means therefor comprising a bimetal element operable when heated a predetermined amount to move from one position to another, movable means disposed at an end of said bimetal element for movably supporting at least one end of said bimetal element in a manner to maintain the contacts closed until the bimetal element has moved a substantial distance toward said other position, and means on said movable support means engageable by said bimetal element when said bimetal moves to said other position to effect opening of said contacts.

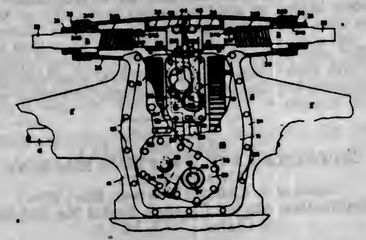
2,462,245
SPACE DISCHARGE DEVICE
Leland A. Wooten, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 25, 1942, Serial No. 456,904
7 Claims. (Cl. 250—165)



1. A caesium producing mixture comprising a caesium compound which reacts with powdered aluminum when heated, powdered aluminum and cuprous oxide.

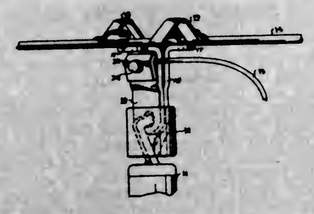
2,462,246
HYDRAULIC POWER LIFT MECHANISM
Wayne H. Worthington and Emil F. Jirsa, Waterloo, Iowa, assignors to Deere Manufacturing Co., a corporation of Iowa
Application August 4, 1944, Serial No. 548,686
7 Claims. (Cl. 60—97)

5. In power lift mechanism, a pair of lifting rockshafts disposed coaxially end to end, a pair of hydraulic cylinders with pistons therein disposed in juxtaposition in a compact arrangement near the adjacent ends of said rockshafts with one cylinder in overlapping relation to the other cylinder between the latter and said rockshafts, and a pair of actuating arms of unequal length fixed to the adjacent ends of said rockshafts, respectively, and extending side by side radially from said rockshafts and connected with the two pistons, the shorter of said arms being connected with the piston in said one cylinder, the latter



having a shorter stroke but greater diameter than said other piston and cylinder to apply substantially equal torque at the two rockshafts.

2,462,247
ELECTRICAL SNAP-ON WIRE CONNECTOR
Stewart E. Wright, Cincinnati, Ohio
Application February 4, 1948, Serial No. 6,286
9 Claims. (Cl. 173—273)

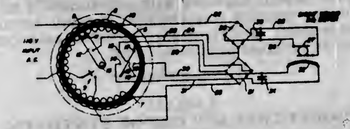


1. A snap-on device for connecting a tap wire to an elongated line wire, said device comprising a body portion adapted to be fastened to the tap wire, said body portion comprising a pair of L-shaped members fastened in back-to-back relationship and defining a contact surface to be engaged by the line wire, wire engageable spring means carried by said body portion and extending outwardly from said contact surface, said wire engageable spring means terminating in line wire contact means urged toward the said contact surface to engage the line wire to thereby hold the same between the contact surface and the wire engagement surface when the snap-on device is connected to the elongated line wire.

2,462,248
SPEAR GUN
Marcus J. Zbar, Tampa, Fla.
Application September 11, 1944, Serial No. 553,625
2 Claims. (Cl. 124—26)

1. A spear gun of the character described comprising an elongated barrel, a spear adapted to be projected through the barrel, a sling, spring connections between the sling and the barrel, said sling being adapted to engage the rear end of the spear, and trigger means between the barrel and the spear, said trigger means consisting of a rocker and a finger carried by the rocker for engaging a formation on the spear, said rocker having its free end bifurcated and a pivotal arm on the barrel provided with a cross pin, said arm being adapted to be swung into the bifurcated portion of the rocker with the cross pin engaging the underside of the rocker.

2,462,249
ELECTRIC MOTOR CONTROL SYSTEM
Eugene R. Ziegler, Spencerport, N. Y., assignor to Ritter Company, Inc., Rochester, N. Y., a corporation of Delaware
Original application March 20, 1947, Serial No. 736,031. Divided and this application April 30, 1948, Serial No. 24,193
10 Claims. (Cl. 318—263)



1. The combination of an alternating current circuit including a transformer having a winding provided with a pair of spaced secondary terminals and with a movable secondary terminal intermediate said spaced terminals, a direct current machine having armature and field windings, a pair of rectifiers for supplying current to said armature and field windings, respectively, each of said rectifiers being connected to one of said spaced terminals and to said movable terminal, and a control member for moving said movable terminal along and in contact with said winding from one toward the other of said secondary terminals thereof, to vary the ratio of currents supplied to said rectifiers and to the windings of said machine, for controlling the operation thereof.

2,462,250
STAPLE PULLER
Howard David Andrews, Salinas, Calif.
Application November 18, 1944, Serial No. 564,057
2 Claims. (Cl. 254—28)

1. In a tool of the character described, a pair of tongs pivoted together to form a pair of jaws on one side of the pivot and a pair of handles on the other side of the pivot, the jaws having parallel contact faces when the handles are pressed toward one another and having lateral extensions shaped to form a hammer head, one of the jaws having a tooth projecting into the other jaw adjacent to and on one side of the median plane of the head and having a recess adjacent to and on the other side of the said median plane, and the other jaw having a similar tooth mounted opposite the recess and having a recess opposite the first tooth, the teeth being operable for engagement under an embedded staple, and the outer faces of the teeth lying in the end surface of the head while the under faces of the teeth are tapered for exerting outward pull on the staple when the handles are pressed toward one another.

2,462,251
PROCESS FOR PREPARING ASCORBIC ACIDS
Henry H. Rogsford, Jr., and William S. Hoerger,

ing condensation product having viscosity derived in part from the methyl cellulose, forming

6. An insulating body for a solidifying casting, which comprises vermiculite in its unexpanded state, a combustible filler, and a bonding agent

by said packings, means to retain said packings on said body, and sleeves of non-metallic material about said body over the exposed areas thereof whereby wear on the plunger and well pump

2,462,251
PROCESS FOR PREPARING ASCORBIC ACIDS
Henry H. Bassford, Jr., and William S. Harmon, Elizabeth, and John F. Mahoney, Westfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application May 16, 1945, Serial No. 594,171
21 Claims. (Cl. 260—344.5)

1. The process for preparing ascorbic acid compounds that comprises heating a 2-keto-hexonic acid compound selected from the group consisting of 2-keto-hexonic acids and esters and methylene-ether derivatives thereof, with concentrated aqueous hydrochloric acid and an organic solvent which is immiscible with aqueous hydrochloric acid and is a non-solvent for ascorbic acid compounds, thereby converting said 2-keto-hexonic acid compound to the corresponding ascorbic acid compound, and evaporating a portion of said organic solvent together with substantially all of the other volatile components, thereby forming a suspension of crystalline ascorbic acid compound in residual organic solvent.

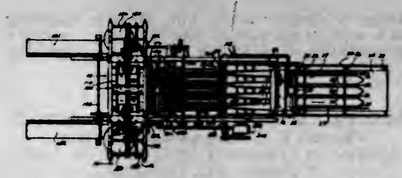
2,462,252
PRODUCTION AND USE OF SYNTHETIC RESIN
Raymond G. Booty, Elmwood Park, Ill., assignor to Weyerhaeuser Timber Company, Tacoma, Wash., a corporation of Washington
No Drawing. Application January 25, 1944, Serial No. 519,645
7 Claims. (Cl. 154—133)

1. The method which comprises heating and condensing to a dissolved water-soluble resin-forming condensation product 1 mole of phenol and about 1.87 moles of formaldehyde in water in the presence of alkali-metal-hydroxide catalyst and in the presence of from about 2 to about 9 parts by weight of polyvinyl alcohol to 100 parts of phenol and conducting said reaction to a stage short of solidification of the mass when cooled to 25° C., thereby providing an alkaline aqueous solution of reactive resin-forming condensation product having viscosity derived in part from the polyvinyl alcohol, forming a film-layer of aqueous liquid glue containing said resin-forming solution as a glue base between layers of solid material including at least one glue-absorbent layer, whereby the viscosity of the glue retards penetration of glue into said layer, and applying heat and mechanical pressure to said layers with said interfacial glue and drying out and thermosetting the resin-forming content thereof.

2,462,253
PRODUCTION AND USE OF SYNTHETIC RESIN
Raymond G. Booty, Elmwood Park, Ill., assignor to Weyerhaeuser Timber Company, Tacoma, Wash., a corporation of Washington
No Drawing. Application January 25, 1944, Serial No. 519,646
7 Claims. (Cl. 154—133)

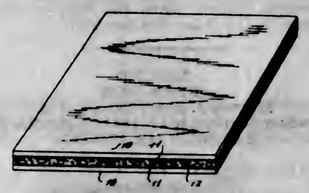
1. The method which comprises heating and condensing to a dissolved water-soluble resin-forming condensation product 1 mole of phenol and about 1.87 moles of formaldehyde in water in the presence of alkali-metal-hydroxide catalyst and in the presence of methyl cellulose of the type soluble in alkaline aqueous solution, said methyl cellulose being dispersed in quantity to yield a liquid reaction mass, and conducting said reaction to a stage short of solidification of the mass when cooled to 25° C., thereby providing an alkaline aqueous solution of reactive resin-forming condensation product having viscosity derived in part from the methyl cellulose, forming a film-layer of aqueous liquid glue containing said resin-forming solution as a glue base between layers of solid material including at least one glue-absorbent layer, whereby the viscosity of the glue retards penetration of glue into said layer, and applying heat and mechanical pressure to said layers with said interfacial glue and drying out and thermosetting the resin-forming content thereof.

2,462,254
MULTIPLE LANE WRAPPING MACHINE AND METHOD
Samuel J. Campbell, Green Bay, Wis.
Application August 17, 1942, Serial No. 455,086
24 Claims. (Cl. 93—3)



1. In a multiple lane wrapping machine having means for feeding a plurality of articles along adjacent paths, means for feeding a broad wrapping web upon which individual wrapper designs are printed in adjacent series, and means for slitting said web into separate strips each containing a series of wrapper designs, the combination with means for laterally spacing the strips in the course of their advance, of means for tubing the respective strips about the successive articles fed upon the respective paths, means for cutting the respective strips between wrapper designs and between the articles entubed therein, and means for completing the packaging of the respective articles in the wrappers cut from the respective strips.

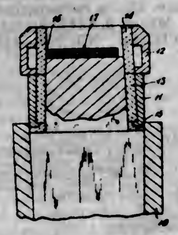
2,462,255
INSULATING COVER
Walter M. Charman, Shaker Heights, and Benjamin F. Anthony, Cleveland Heights, Ohio, assignors to Ferro Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application July 28, 1945, Serial No. 607,500
9 Claims. (Cl. 22—147)



1. The method of creating in situ an insulating blanket for a solidifying casting, which comprises placing over the hot metal a covering comprising noncombustible material of the group consisting of vermiculite and perlite of a character to expand permanently under the influence of heat from the casting to occupy a space at least five times that occupied by the material when deposited.

6. An insulating body for a solidifying casting, which comprises vermiculite in its unexpanded state, a combustible filler, and a bonding agent formed, and dried.

2,462,256
INSULATING COVER
Walter M. Charman, Shaker Heights, and Benjamin F. Anthony, Cleveland Heights, Ohio; said Anthony assignor to The Ferro Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application November 2, 1945, Serial No. 626,264
4 Claims. (Cl. 22—147)



3. An insulating cover for a solidifying ferrous metal casting, which comprises a slab having a rigid layer which when subjected to the action of heat from the molten metal is substantially infusible, incombustible and self-sustaining, a layer of insulating material carried on the upper side of said rigid layer and a third layer comprising adherent material on the lower side of said rigid layer, said third layer comprising a combustible bonding agent and a filler and being adapted to disintegrate under the influence of heat from the said metal and deposit insulating material in comminuted form upon the casting to constitute an insulating blanket in direct contact with the surface of the casting which follows the metal of the latter downwardly as the formation of the shrinkage cavity progresses.

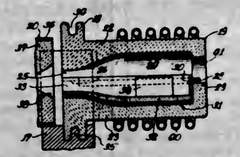
2,462,257
PUMP PLUNGER
John D. Cunningham, Houston, Tex.
Application September 19, 1944, Serial No. 554,801
9 Claims. (Cl. 103—225)

1. A plunger for well pumps comprising a body, a plurality of spaced packings thereon providing exposed areas of said body which are not covered by said packings, means to retain said packings on said body, and sleeves of non-metallic material about said body over the exposed areas thereof whereby wear on the plunger and well pump are minimized.

2,462,258
CAP
Milton A. Dannenberg, Chicago, Ill.
Application March 21, 1946, Serial No. 655,908
3 Claims. (Cl. 2—172)

1. A cap comprising a crown, a visor, an eye shield, means connecting said visor and shield to the base of said crown, said shield extending at both ends beyond the ends of said visor, a U-shaped piece comprising a bight portion connected to said base beyond said visor and terminating at the ends of said visor and exteriorly overlapping and extending end portions of said shield, said bight being dimensioned to protect the ears and back of the neck of the wearer, the arms of said U-shaped piece constituting straps having means for fastening the same under the chin of the wearer, said piece being of limp material and being foldable selectively within or over said crown into flatwise engagement therewith, said fastening means being interconnectable at the top of the crown with said straps in snug engagement with the crown, and a coat collar covering flap of generally trapezoidal form with its short base connected to the lower margin of said bight and the remainder of said flap free and its ends exteriorly overlapping said straps.

2,462,259
CRUCIBLE HOLDER AND CRUCIBLE
John Frei, Jr., Chicago, Ill.
Application January 20, 1945, Serial No. 573,746
5 Claims. (Cl. 263—11)



1. In a crucible structure for use in centrifugal casting, a refractory body formed in two separate superposed interiorly recessed sections defining a melting chamber, said body having a restricted opening leading through its outer end from said chamber, and an open top crucible seating in the recess of the lower one of said sections having a restricted discharge neck extending through said opening, said body having integral inwardly projecting end walls restraining said crucible against endwise movement relative to said body.

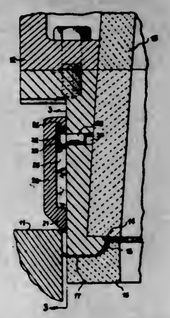
2,462,260
HOT TOP BLOCKING

hub, comprising rivets extending through the center portion of the hub and through the sides,

2,462,264
BALE TIE BUCKLE
Jack Hess, Houston, Tex.

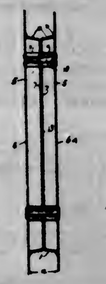
peated during the remaining portion of the period of translation of said combined signals following said one selected pulse, and a signal-translating

2,462,260
HOT TOP BLOCKING
Levi J. Garma, Lakewood, Ohio, assignor to The Ferro Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application April 12, 1947, Serial No. 741,114
8 Claims. (Cl. 22—147)



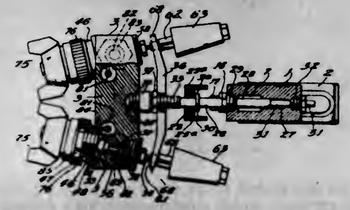
1. In a hot top of the floating type adapted to be supported at a plurality of points upon an ingot mold during the pouring operation, a plurality of headed pins mounted in and projecting outwardly from said hot top, a like number of blocks abutting the walls of the hot top adapted to rest upon a mold, each of said blocks having a transverse channel therein receiving one of said pins, said channel where it crosses the longitudinal axis of the block being adapted, when the block is in upright position and resting upon the mold, to support a pin, and said channel having a lateral leg adapted to guide the movement of the block when the latter is shifted away from pin supporting position.

2,462,261
MOVING PICTURE FILM REEL
Jacob M. Goldberg, Denver, Colo.
Application June 11, 1945, Serial No. 598,747
2 Claims. (Cl. 242—74)



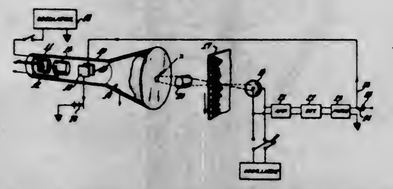
1. A reel for moving picture films, comprising, two circular sides, and a substantially cylindrical hub formed from two identical parts, each part having a central portion and an outwardly extending continuous flat flange connected therewith by means of an outwardly flaring frusto-conical surface, the hub members having the central portions in contact, means for securing the hub members and the sides to each other with the sides in contact with the flanges of the hub, comprising rivets extending through the center portion of the hub and through the sides, whereby a unitary reel assembly is formed, the distance between the outer surfaces of the flanges being slightly greater than the width of the film to be wound thereon and the distance between their inner surfaces being slightly less than the width of the film.

2,462,262
DUAL SPRAY GUN
Eric Gustafson and Harold L. Striegel, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application March 9, 1944, Serial No. 525,636
4 Claims. (Cl. 299—140)



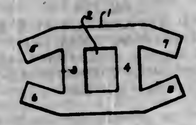
1. In a dual type of spray gun, a gun body, a pair of spray nozzles supported on the gun body, a pair of needle valves to control the spray from the nozzles, spring means normally closing said valves, a yoke connected at its opposite ends to the needle valves so that when the yoke is moved in one direction the needle valves will open and when it is moved in the opposite direction said valves will be closed by their respective springs, a guide member, means on the gun body to mount the guide member so that it may reciprocate, said yoke being rigidly but adjustably connected to the guide member so as to reciprocate therewith, and means movably supported on the gun body and adapted to engage the guide member to move the same to effect opening of said needle valves.

2,462,263
REPRODUCTION OF SOUND
Harold E. Haynes, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application February 2, 1945, Serial No. 575,885
5 Claims. (Cl. 179—100.3)



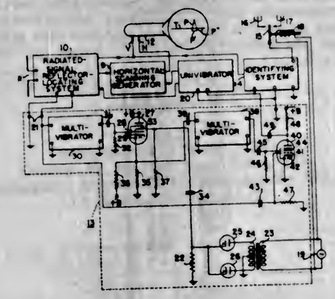
1. In a device for reproducing sound from a variable width sound record, means for producing a light spot which varies in intensity at a super-audible frequency, and means responsive to light transmitted through said record for moving said spot in accordance with the contour of the boundary between the opaque and transparent areas of said record.

2,462,264
BALE TIE BUCKLE
Jack Hess, Houston, Tex.
Application December 11, 1944, Serial No. 567,586
2 Claims. (Cl. 24—23)



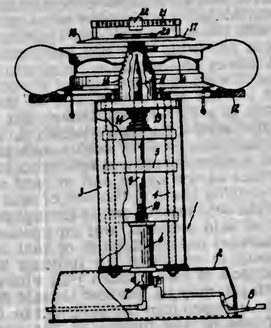
1. A bale tie buckle comprising a member of substantially H-shape with four projecting ends, said member having an opening in its transverse portion to receive in overlapping relation the ends of a bale tie to be secured thereby, the member being adapted to be rotated about its transverse portion to reversely bend overlapped portions of the tie about each of the branches formed in the transverse portion of the buckle by said opening, whereby said projecting ends of said member lie substantially parallel alongside the tie, and said projecting ends being deformable inwardly substantially in the plane of the buckle to engage the surface of the tie.

2,462,265
FREQUENCY DIVIDER
Charles J. Hirsch, Douglaston, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 16, 1944, Serial No. 549,743
5 Claims. (Cl. 250—27)



1. A frequency divider comprising, a first input circuit adapted to have applied thereto a high-periodicity recurrent-pulse signal, a second input circuit adapted to have applied thereto a periodic control signal having a periodicity substantially lower than that of said first-mentioned signal and nonintegral with respect thereto, repeater means for combining said signals and responsive to the combined amplitudes thereof for repeating during each period of said control signal only a portion of said combined signals including only a limited number of pulses of said first-mentioned signal, pulse-responsive means responsive to at least one selected pulse of said repeated pulses occurring during each period of said control signal for initiating a pulse of a recurrent-pulse signal and for thereafter rendering said pulse-responsive means unresponsive to any pulse repeated during the remaining portion of the period of translation of said combined signals following said one selected pulse, and a signal-translating channel coupled to said first input circuit and responsive to said last-mentioned recurrent-pulse signal for translating during each pulse thereof said first-mentioned signal to derive a recurrent-pulse signal having a predetermined time relationship with said first-mentioned signal but an average periodicity equal to that of said control signal.

2,462,266
STATIC WHEEL BALANCING APPARATUS
George H. Howard, Long Beach, Calif.
Application August 2, 1946, Serial No. 688,388
3 Claims. (Cl. 73—66)



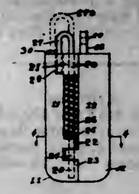
1. In a wheel balancing device, a stand, a shaft mounted in said stand, means connected to said shaft to move the shaft vertically, and means on the upper end of said shaft adapted and arranged to receive a wheel, a pointer journaled on said last named means, said pointer being adapted to be moved in a substantially horizontal plane, a bubble level mounted on the pointer and a balance weight slidably mounted on the pointer.

2,462,267
ORGANO-SILOXANE POLYMERS AND METHODS OF PREPARING THEM
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Original application February 26, 1942, Serial No. 432,528. Divided and this application April 17, 1943, Serial No. 483,449
3 Claims. (Cl. 260—448.2)

3. A copolymeric organosiloxane comprising copolymeric units which contain substantially entirely oxygen atoms, organo-silicon units which correspond to the general formulae $(CH_3)Si=$, $(C_6H_5)(C_2H_5)Si=$, and $(C_6H_5)(CH_3)_2Si-$, respectively, said units being present in substantially equimolecular amounts, said organo-silicon units being the only silicon units present in said organosiloxane and being joined to each other by said oxygen atoms by silicon-oxygen linkages, the remaining valences of the silicon atoms being satisfied by said silicon-oxygen linkages.

friction member contacting the under face of said

2,462,268
LOCKING MEANS FOR A HINGED IMPACT MASS OR WEIGHT FOR MARINE EQUIPMENT
Joseph Kahl, New York, N. Y.
Application May 1, 1947, Serial No. 745,336
2 Claims. (Cl. 16—1)

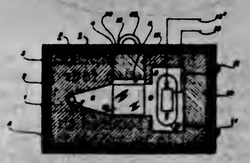


1. A locking means, for a hinged impact mass or weight for marine equipment comprising a pair of sections hingedly connected to each other at the rear side thereof, comprising a spring pressed locking pin rotatably and slidably connected to the front side of one of said sections and detachably engaged with the front side of the other section, said locking pin terminating at the upper end thereof in a retroverted branch pin, the top of said one section having therein a well for receiving therein the end of said branch pin when said other section is engaged by the locking pin, a flat surface at the upper end of said one section for receiving thereon the end of said branch pin when the said locking pin is disengaged from the other of said sections, and an upwardly extending parapet on the flat top of said one section adjacent to said well for limiting the motion of the end of said branch pin, whereby the said branch pin may be retained on said flat surface and be dropped into the said well by a slight motion of one of the fingers of the operator's hand which holds the impact mass in position.

2,462,269
CONVERTIBLE CUSHION
Alvin W. Krempel, Milwaukee, Wis.
Application November 29, 1947, Serial No. 788,831
4 Claims. (Cl. 2—88)

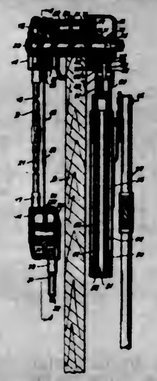
3. A garment convertible into a cushion comprising a hood made up of a pair of substantially rectangular panels each having a pair of long sides and a pair of shorter sides, said panels being closed along one long side, along an adjacent short side, and along a portion of the second short side, and having a continuous opening along the second long side and the unclosed portion of the second short side, the edges of said panels adjacent the opening being provided with a multiple slide operated fastener, and a coat having a neck opening, said coat being connected to the interior of said hood in such a manner that the margin of the neck opening registers with the panel edges extending along the unclosed portion of the second short side of the hood, said coat being selectively foldable into said hood through said hood opening to form a cushion.

2,462,270
METHOD AND APPARATUS FOR PHYSICO-CHEMICAL ANALYSIS
Leonard B. Lipson, Arlington County, Va.
Application September 7, 1943, Serial No. 501,499
7 Claims. (Cl. 250—83.6)



1. The method of determining the amount of hydrogenous material in a selected sample which comprises completely drying the sample, interposing the dried sample in a path of fast neutrons, and measuring the reaction between fast neutrons and the hydrogenous material in the sample by imposing the slow neutrons resulting from such reaction upon a Geiger-Müller counter.

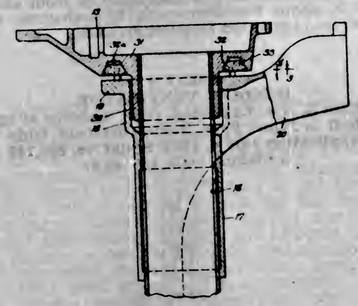
2,462,271
DRAFTING MACHINE
Charles Henry Little, Cleveland Heights, and Charles Hubbard Little, Cleveland, Ohio
Application September 22, 1944, Serial No. 555,269
19 Claims. (Cl. 33—79)



19. In a drafting machine or like device adapted to be used on an inclined drawing board or the like, an anchor member adapted to be connected to a drawing board or the like, a wheel fixed with respect to said anchor member and adapted to be located at one side of the drawing board to which the anchor member is attached, a spindle rotatably supported in said anchor member concentric with said wheel and adapted to extend to opposite sides of the drawing board, a strut fixed with respect to said spindle, a second wheel spaced from said first wheel, means for pivotally connecting said second wheel to said strut, a flexible band encircling said wheels, a cam operatively connected to said spindle and adapted to be located at the side of the drawing

board opposite said wheels, a compression spring adapted to be located at the side of said drawing board opposite said wheels, means for operatively connecting said spring to said cam comprising a lever pivotally supported at one side of said cam and operatively connected thereto, a third wheel concentric with said second wheel and fixed with respect thereto, a second strut, means for pivotally connecting said second strut to said third wheel for rotation about an axis concentric therewith, a fourth wheel spaced from said third wheel, means for pivotally connecting said fourth wheel to said second strut, a flexible band encircling said third and fourth wheels, an instrument operatively connected to said fourth wheel, a fifth wheel located adjacent to said first wheel, means for supporting said fifth wheel for rotation about an axis concentric with the axis of said spindle, a sixth wheel concentric with said second and third wheels and fixed to said second strut, a flexible band encircling said fifth and sixth wheels, means for adjusting said wheels angularly with respect to each other, a second cam located adjacent to said first cam, means for supporting said second cam for rotation about an axis concentric with the axis of said spindle, an internal gear fixed to said fifth wheel, a second internal gear fixed to said second cam, a second spindle rotatably supported in said anchor member and provided with pinion gears in mesh with said internal gears, a second compression spring located adjacent to said first spring, means for operatively connecting said second spring to said second cam comprising a lever pivotally supported at one side of said second cam and operatively connected thereto, means for pivotally supporting said springs for rotation about an axis generally parallel with the axis of said spindle whereby the point of application of the force thereof to their respective levers may be varied, and means adapted to be operatively connected to the drawing board for automatically rotating said springs about said axis upon variation of the board angle for increasing the counterpoising effect of said springs at an accelerated rate as the board angle increases.

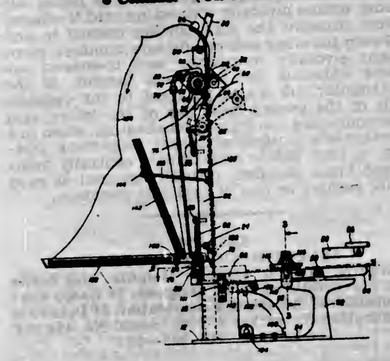
2,462,272
STEERING STABILIZER
George W. Martin, Eau Claire, Wis.
Application August 27, 1945, Serial No. 612,939
14 Claims. (Cl. 248—4)



1. In a steering stabilizer for outboard motor units, a non-rotatable tubular housing having a circumferential flange at its upper end, a motor support tube turnable in said housing having a motor mounting member overlying said flange, a friction member contacting the under face of said mounting member and spaced above said flange, and resilient members confined under compression between and having positive connection to said flange and said friction member, said resilient members presenting yielding resistance to rotation of said tube supplementary to the resistance presented by the frictional contact between said friction member and said mounting member.

13. In a steering stabilizer for outboard motor units, a non-rotatable member, a motor support tube turnable in said member, and means mounting said tube on said member comprising resilient means and friction means attached thereto whereby said tube has relative turning movement in either direction by motor torque vibration limited in extent by said resilient means and is frictionally held against turning movement in either direction beyond such limited extent while being turnable to any desired extent in either direction by turning force applied thereto materially greater than that of motor torque vibration, said resilient means supporting said tube providing a cushion mounting therefor.

2,462,273
COPYHOLDER
Earl H. Metcalf, Ridgefield Park, N. J.
Application July 6, 1945, Serial No. 603,419
6 Claims. (Cl. 129—32)



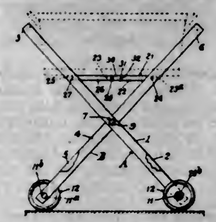
1. A copy holder comprising a main base portion; a stationary backing plate having an opening therein supported by said base portion; an auxiliary base portion pivotably attached on a transverse horizontal axis to said main base portion; means for locking said auxiliary base portion either projecting forwardly in alignment with said main base portion or projecting upwardly at substantially a right angle thereto; a line indicator pivotally supported with reference to said backing plate adjacent the opening therein; means for effecting step-by-step upward feeding of a paper between said backing plate and said line indicator including a manually operable lever pivotally mounted on said auxiliary base portion; manually adjustable means carried by said auxiliary base portion and cooperating with said lever for limiting the actuating movement thereof; and collapsible means attached to and extending rearwardly from the back of said backing plate for supplying to and receiving from said paper-feeding means a folded-paper-ribbon.

2,462,274
second of said units for adding pulses applied to

rectangular cross-section, sheet metal thimbles

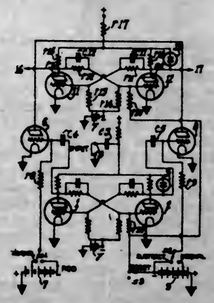
2,462,281
SKI BINDING

2,462,274
FOLDING CLOTHESBASKET CARRIER
William F. Meyer, Chicago, Ill., assignor to Frieda H. Meyer, Chicago, Ill.
Application May 3, 1944, Serial No. 534,007
2 Claims. (Cl. 248—129)



1. In a carrier for laundry baskets and the like, a pair of main frames each including a top cross member and a pair of side members, said side members being pivoted to each other intermediate their ends, and a combined basket support and reinforcement including a closed rigid four-sided rectangular strap metal sub frame comprising side bars and cross bars, means pivotally connecting the side bars of said sub frame adjacent to opposite ends of one cross bar thereof to and between one pair of said side members, and a rigid substantially U-shaped strap metal sub frame, means pivotally connecting said U-shaped frame adjacent the yoke portion thereof to and between the other pair of said side members, pivot means pivotally connecting said U-shaped sub frame adjacent the free ends thereof, to the rectangular sub frame adjacent to the opposite ends of the second cross bar of the latter, said interconnected sub frames constituting, when in a substantially horizontal basket supporting position, a four sided, rectangular, centrally reinforced brace member, pivotally secured at each of its corners to one of said side members.

2,462,275
ELECTRONIC COMPUTER
George A. Morton, Haddon Heights, and Leslie E. Flory, Oaklyn, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application November 2, 1942, Serial No. 464,293
6 Claims. (Cl. 235—92)



6. The combination of a pair of units operable either to a binary one or a binary zero condition in response to an input pulse, a pair of pulse transfer means connected between said units, means for controlling the first of said transfer means to pass input pulses from the first to the second of said units for adding pulses applied to the input of said first unit, and means for controlling the second of said transfer means to pass input pulses from the first to the second of said units for subtracting from said added pulses further pulses applied to the input of said first unit.

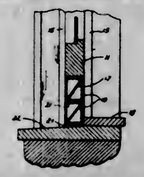
2,462,276
SEEDER CONVEYER
John A. Mueller, Milwaukee, Wis.
Application December 6, 1946, Serial No. 714,624
2 Claims. (Cl. 198—30)

1. A seeder comprising a frame, a hopper mounted thereon, pulleys mounted at the ends of the frame, an endless apertured belt mounted upon the pulleys, an endless apron mounted upon one of said belt pulleys and a second idle pulley, the apron engaging the under surface of the belt to form seed pockets, and a seeder ejector sprocket wheel eccentrically mounted with reference to one of the belt pulleys for engaging the belt apertures.

2,462,277
METHOD OF PREPARING AN ACTIVATED MAGNESIUM OXIDE
John J. Naugle, New York, N. Y.
No Drawing. Application November 27, 1946, Serial No. 712,725
1 Claim. (Cl. 252—413)

The method which comprises; suspending magnesium hydrate, which is impregnated with organic matter adsorbed from sugar liquids, in water; bubbling gaseous carbon dioxide through said suspension until the pH thereof is adjusted to about 6.5 and the magnesium compound initially present is in solution in the form of magnesium bicarbonate; boiling said solution until the soluble magnesium bicarbonate is transformed into the insoluble magnesium carbonate; removing said magnesium carbonate from said solution; and thereafter calcining said magnesium carbonate at a temperature of from about 500 to about 950 degrees C. to transform the same into activated magnesium oxide.

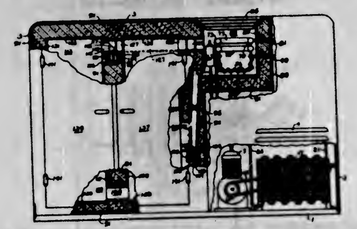
2,462,278
WINDOW VENTILATOR
William B. Nye, Lakewood, Ohio, assignor of one-half to James Faus, North Olmstead, Ohio
Application July 4, 1945, Serial No. 603,143
5 Claims. (Cl. 98—99.3)



1. As an article of manufacture, a window ventilator of the type adapted to be inserted below a window sash comprising a wire mesh tube of

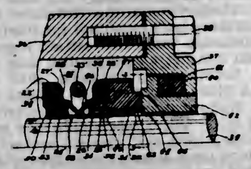
rectangular cross-section, sheet metal thimbles secured thereto, sheet metal sleeves telescopically engaged with said thimbles, and a baffle in said tube for the deflection of the air passing therethrough.

2,462,279
MULTIPLE COMPARTMENT REFRIGERATOR, INCLUDING CONTROLS FOR THE REFRIGERATING SYSTEM THEREOF
Charles Passman, New York, N. Y., assignor to S. F. Bowser & Company, Ltd., Toronto, Ontario, Canada, a corporation of Canada
Application September 27, 1945, Serial No. 618,899
8 Claims. (Cl. 62—2)



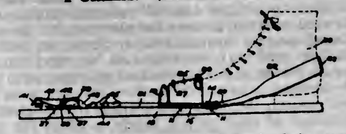
1. In a mechanical refrigerator, a refrigerating unit having an evaporator, a refrigerated compartment for said evaporator, a second refrigerated compartment, ducts connecting said compartments for circulating air, a shutter movable between open and closed position and thermostatically responsive to the temperature in said second compartment for regulating said circulation, and a blower in one of said ducts operating simultaneously with the opening of said shutter to force circulation of said air.

2,462,280
SEAL ADAPTER
Frank E. Payne, Glencoe, Ill.
Application August 9, 1945, Serial No. 609,845
5 Claims. (Cl. 286—11)



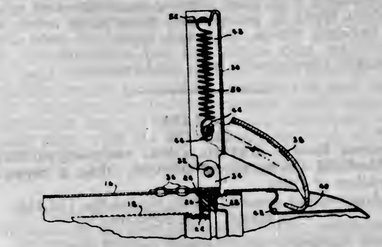
1. A sealing device for relatively rotatable elements comprising a sleeve surrounding one of the elements, an enlarged part at one end of the sleeve, a resilient band compressed between the enlarged part and the element surrounded by the sleeve to form a fluid-tight seal therebetween and to provide a drive for the sleeve, a sealing surface on the other element, a sealing washer surrounding the sleeve and having a sealing surface in contact with the first-mentioned sealing surface, flexible tubular means having a cylindrical part at one end in engagement with the exterior surface of the enlarged part and a flange at the other end in fluid-tight engagement with the washer, a ferrule clamping the cylindrical part upon the said enlarged part, and a slidable driving connection between the washer and sleeve.

2,462,281
SKI BINDING
John M. Plane, Hanover, N. H.
Application May 13, 1947, Serial No. 747,621
4 Claims. (Cl. 280—11.35)



1. In a ski binding, a metal foot plate secured to the ski and having a pointed toe plate formed at the front thereof and cable guides at the rear sides thereof, a toe strap of flexible material secured to the ski by said toe plate, a relatively non-resilient cable of flexible material having a resilient flat section extending around the rear of the wearer's foot, and a releaseable clamp secured to said ski for pulling said cable tight around the wearer's foot.

2,462,282
LATCHING MECHANISM
Jack Pickford, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 19, 1945, Serial No. 605,891
1 Claim. (Cl. 292—113)



Latching means including a fixed support and a hollow lever of U-shaped cross section comprising a top wall and side walls, said lever having one end thereof pivoted to said support, there being two longitudinally-extending slots formed in the side walls of said lever near the pivoted end thereof, a pin movable in said slots, a latch member of U-shaped cross section comprising a top wall and side walls, said latch having the end portions of its side walls attached to said pin, and a helical spring connected at one end to said pin and at the other end to said lever at a point remote from said pivot, said spring being disposed in the hollow portion of said lever and being substantially enclosed thereby and biasing said pin in a direction away from the pivoted end of said lever, and said walls of said latch overlying and concealing said support.

2,462,283
ELECTRICAL SWITCH
Gustav W. Rathert, Webster Groves, Mo., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application July 20, 1945, Serial No. 606,086
4 Claims. (Cl. 200—146)

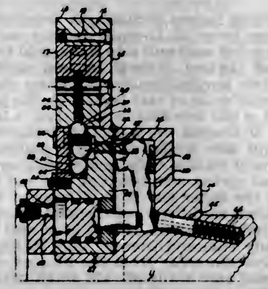
1. An electrical switch assembly comprising an upper structure, a switch blade supported for movement into and out of contact engagement

with respect to said contact structure, a quick-

base; a spring on the valve urging the valve against the seat; means to adjust the valve spring

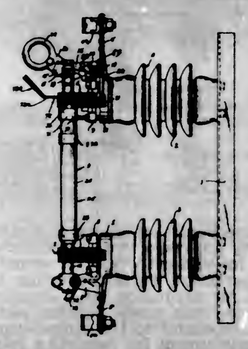
with respect to said contact structure, a quick-break mechanism comprising a tubular structure supported by and movable with said switch blade, a contact arranged within said tubular structure, a rod structure movable within said tubular structure into and out of contact engagement with said contact, means for electrically connecting said contact to said switch blade, an element engaging said rod structure at an end thereof so as to retain same in contact engagement with said contact when said switch blade is in the closed-switch position and during initial opening movement of said switch blade, a pivot for supporting said movable element for pivotal movement, a spring for subjecting said element to pivotal movement, a coil spring associated with said rod structure for moving said rod structure out of contact engagement with said contact, and means carried by said tubular structure which engages and retains said element in a position where said rod structure is maintained in contact engagement with said contact and which is movable with said tubular structure and said switch blade to permit said element to move to a position where said coil spring of said rod structure may move said rod structure out of contact engagement with said contact.

2,462,284
CHUCK
Konrad Rauch, Dayton, Ohio, assignor to The Sheffield Corporation, Dayton, Ohio, a corporation of Ohio
Application June 13, 1947, Serial No. 754,432
6 Claims. (Cl. 279—44)



6. A chuck comprising a segmental body member having a substantially V-shaped notch, a substantially V-shaped clamping member operably mounted in said notch, said members each having a pair of angularly related flat cooperating holding surfaces for gripping a circular part to be held, a roller receiving socket in said clamping member, a roller partially received in said socket, a second roller parallel to and spaced from said first roller, a removable spacing strip interposed between said second roller and said body member, said rollers constituting a pair, a spreading roller of larger diameter than the rollers of said pair and arranged between said pair, means for operating the spreading roller transversely of its axis to spread the said pair and thus move the clamping member against the part, and yielding means for urging the clamping member to release position.

2,462,285
ELECTRICAL SWITCH
Ned J. Rees, St. Louis, Mo., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application July 20, 1945, Serial No. 606,144
5 Claims. (Cl. 200—146)

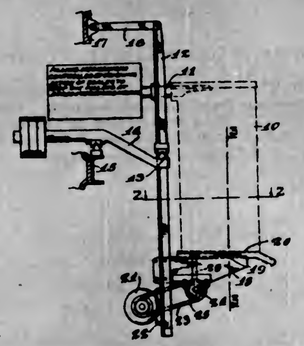


1. An electrical switch assembly comprising a contact structure, a switch blade supported for movement into and out of contact engagement with respect to said contact structure, a quick-break mechanism comprising a hollow structure supported by and movable with said switch blade, an elongated member arranged for movement within said hollow structure, said elongated member including a plurality of annular contact elements spaced longitudinally of said elongated member, tubular insulating members interposed between said contact elements for insulating said contact elements from each other, means for securing said contact elements and said insulating members together to produce said elongated member, a plurality of contact means associated with said hollow structure and electrically connected to said switch blade and into and out of contact with which said spaced contact elements of said elongated member are movable, each of said contact means comprising a plate having a contact extending therefrom laterally of said hollow structure, and resilient means for urging said plate inwardly toward said elongated member, and a member engaging said elongated member so as to retain said spaced contact elements thereof in contact engagement with the contacts of said plurality of contact means associated with said hollow structure when said switch blade is in the closed-switch position and during initial opening movement of said switch blade, said elongated member being adapted to become disengaged from said member when a predetermined portion of the opening movement of said switch blade has been completed to permit said elongated member to move so as to disengage said spaced contact elements of said elongated member from the contacts of said plurality of contact means associated with said hollow structure.

ends in planes at right angles to the ends of the wires; a plurality of fish hooks; a plurality of looped leaders connected to the fish hooks; and

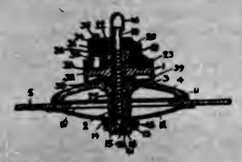
different directions, means for producing electrical pulses in response to movement of said

2,462,286
BAG PACKER AND WEIGHER WITH JIGGING DEVICE
Herman S. Rhodes, Birmingham, Ala., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Application August 19, 1944, Serial No. 550,128
5 Claims. (Cl. 249—60)



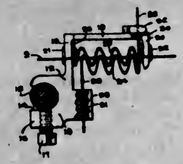
3. In apparatus for filling and weighing valve bags the combination comprising, weighing scale means, bag support means pivotally mounted upon said scale means for weighing thereby, a filling spout mounted upon said bag support means, means for stopping the flow of material through said spout in response to weighing action of said scale means, a bag bottom support for supporting the bag in position on said spout during filling, means pivotally mounting said bottom support on said bag supporting means along a generally horizontal axis which passes adjacent the center of the bag bottom, the pivot axes of said bag support means and of said bottom support pivotal mounting means being substantial parallel, and means for rapidly oscillating said bottom support about its pivotal mount during filling and weighing of the bag with oscillations insufficient materially to alter the position of the center of gravity of the bag relative to the scale means and at a frequency too high for the scale means to respond thereto to actuate said means for stopping the material flow.

2,462,287
SAFETY VALVE
Sanford E. Richesen, Brooklyn, and Joseph A. Allegro, Maspeth, N. Y., assignors of one-third to Louis C. Huger, Ridgewood, N. J.
Application August 22, 1946, Serial No. 692,233
4 Claims. (Cl. 137—53)



4. A valve for a pressure cooker having a vessel and a lid adapted to be tightly locked in an operative position on the vessel, the lid having an opening; a convex plate placed over the opening; a valve base secured to the convex plate; a valve in the base; a seat for the valve in the base; a spring on the valve urging the valve against the seat; means to adjust the valve spring pressure for adjusting the pressure of the vapors in the vessel at which the valve is opened; an extension on the base passing through the opening; a spring plate engaged by the extension, the ends of the spring plate engaging the under side of the lid over the opening; and means to adjust the pressure of the spring plate for regulating the pressure at which the spring plate yields and releases the convex plate to be raised thereby allowing the vapors to escape.

2,462,288
YARN TENSIONING DEVICE
Emil Richter, Philadelphia, Pa.
Application December 29, 1945, Serial No. 638,175
8 Claims. (Cl. 242—154)



1. A yarn tensioning device of the character described comprising, in combination, a pair of open-coiled members adapted to be relatively shifted to present the convolutions of said members in interjacent relation to thereby provide a common passage therethrough for a length of yarn, and a mounting bracket for supporting one of said coils in fixed position, said bracket including means for guiding the other of said coils for movement in a plane common to the axes of both coils, said movable coil being suspended from said yarn with its axis paralleling that of the fixed coil.

2,462,289
FURNACE REFRACTORY CONSTRUCTION
William F. Rochow, Pittsburgh, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 11, 1945, Serial No. 598,774
11 Claims. (Cl. 72—37)

1. A furnace structure including a section comprising preformed shapes of non-acidic refractory material and flat surfaced oxidizable metal plates disposed between adjacent pairs of faces of said shapes, and at least one of said faces of said pairs being provided with recessed portions providing spaces into which oxide of said metal may grow as the metal oxidizes in use of the furnace.

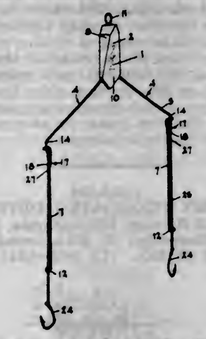
2,462,290
FISHHOOK SUPPORTING FRAME
Lawrence E. Sauvey, Lakeside, Ohio
Application March 31, 1945, Serial No. 585,955
3 Claims. (Cl. 43—28)

1. In a fish lure; a light reflecting head part; a plurality of resilient wires protruding from the head part and distributed in spaced relation below and rigidly secured to the head part; each of the wires having closed loops at their free

2,462,294
AUTOMATIC FREQUENCY CONTROL
Leland E. Thompson, Merchantville, N. J., as-

cally extending portions spaced laterally from said central laminated portion and positioned at the opposite lateral portions of the pocket, said last mentioned vertically extending portions in-

ends in planes at right angles to the ends of the wires; a plurality of fish hooks; a plurality of looped leaders connected to the fish hooks; and

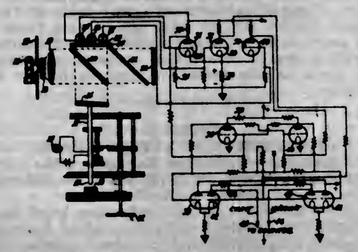


the central parts of the wires having double reversed bends which resiliently press against each other to engage and confine the loops of the leaders and locate the hooks below and proximate the free ends of the wires.

2,462,291
VALVE
Frederick E. Sette, Alameda, Calif.
Application May 3, 1944, Serial No. 533,850
1 Claim. (Cl. 251—25)

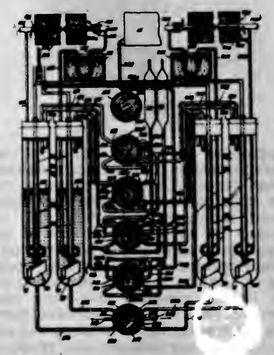
In a valve mechanism, a valve stem having an arcuately cross-channeled head, a relatively soft valve plug embracing the head of the stem, and a valve actuating spring having an arcuate end portion socketed in the cross channel of the head, said plug having a registering cross channel in which said arcuate end portion of the spring is also engaged, whereby relative rotation and shifting movements of the plug and stem head are prevented.

2,462,292
LIGHT INTERFERENCE DISTANCE MEASURING DEVICE HAVING PHOTOELECTRIC MEANS
Richard L. Snyder, Jr., Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 13, 1943, Serial No. 498,512
3 Claims. (Cl. 88—14)



1. The combination of means for producing bands of light, means for moving said bands in different directions, means for producing electrical pulses in response to movement of said bands, and means including a plurality of amplifiers controlled by said pulses and provided with a common cathode resistor for producing pulses of one polarity when said bands are moved in one direction and for producing pulses of a different polarity when said bands are moved in another direction.

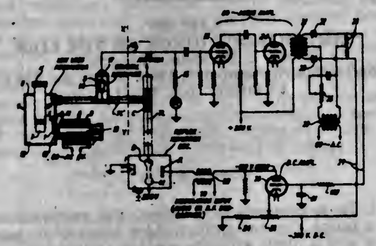
2,462,293
AUTOMATICALLY MEASURING CONCENTRATIONS OF GASES
Moyer D. Thomas, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application April 8, 1943, Serial No. 482,355
9 Claims. (Cl. 23—232)



1. In apparatus for automatically measuring concentrations of volatile compounds in gases, a pair of absorbers, a first conduit connected to a first of said pair of absorbers to pass a stream of raw gas to be tested directly into said first of said absorbers, a combustion chamber, a second conduit connected to said combustion chamber through which to pass another stream of said raw gas to oxidize volatile compounds contained therein, a third conduit connected to said combustion chamber and the second of said pair of absorbers to pass said oxidized stream into the second of said absorbers, a container for a source of absorbent solution, means including a valve connecting said container and absorbers to pass measured quantities of said solution into said absorbers, means associated with said apparatus to cause said streams to pass through the solutions in said absorbers, and means to determine the conductivity of the solutions in said absorbers.

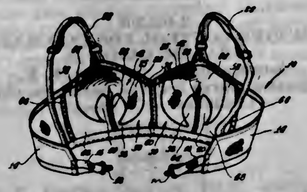
8. A method for measuring the concentrations of volatile compounds in gaseous mixtures of the character described which includes passing a stream of raw gas through a body of absorbent reagent while measuring the conductivity of the reagent and passing another stream of raw gas from the same source over a glowing electrical heat resistant element in a confined space whereby to oxidize oxidizable volatile compounds, cooling the oxidized stream and then passing the oxidized stream through a second body of absorbent reagent while measuring the conductivity of the second body of reagent.

2,462,294
AUTOMATIC FREQUENCY CONTROL
Leland E. Thompson, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 22, 1946, Serial No. 671,454
9 Claims. (Cl. 250—36)



1. In combination, a generator of high frequency waves, a stable low loss tuned resonator circuit tuned to a desired frequency of operation, a vibrator circuit coupled to said resonator circuit for changing the frequency of operation of said resonator circuit, a source of low audio frequency current coupled to said vibrator circuit and energizing the same to operate at the frequency of said source, a circuit coupling said generator to said resonator circuit for exciting said resonator circuit with waves derived from said generator, a rectifier within a metallic shell coupled to said last coupling circuit and located between said resonator circuit and said generator, a balanced phase detecting system coupled to said rectifier and to said source of low audio frequency current, said balanced detecting system producing a variable voltage as the frequency of said generator varies with respect to the mean frequency of operation of said variably tuned resonator circuit, and means utilizing the variable voltage so produced for controlling the frequency of operation of said generator.

2,462,295
BRASSIERE
Margaret H. Wittenberg, Millburn, N. J., assignor to Jantzen Knitting Mills, New York, N. Y., a corporation
Application October 26, 1945, Serial No. 624,659
4 Claims. (Cl. 2—42)

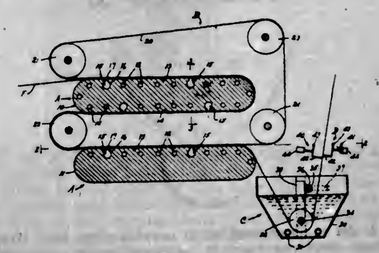


1. In a brassière, a pair of breast pockets of fashioned cup form, each having a fashioning seam in the central lower part thereof and provided with a central laminated stiffening portion extending vertically of the pocket along said seam and disposed substantially entirely below the apex of the cup form, said laminated stiffening portion comprising separate pieces of thermoplastic woven fabric disposed adjacent to each other at opposite sides, respectively, of said seam, each of said pockets also having laminated vertically extending portions spaced laterally from said central laminated portion and positioned at the opposite lateral portions of the pocket, said last mentioned vertically extending portions including pieces of thermo-plastic material integral with said first mentioned pieces, respectively at the lower edge portion of the cup, each portion of the cup form above the apex thereof and between said upwardly extending stiffened portions being more yieldable than said stiffened portions.

2,462,296
SPRING REEL
Charles R. Yirava, Cleveland, Ohio, assignor to Benjamin Reel Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 6, 1947, Serial No. 732,703
10 Claims. (Cl. 242—107)

9. A level winding device comprising a drum, a frame, means journalling said drum in said frame for rotation in a fixed plane, a gear movable with said drum, a disk journalled in said frame substantially normal to the medial plane of said drum, and a gear movable with said disk and coupled to said first gear for rotation therewith for driving said disk, said disk having a hole formed therein adjacent its periphery for receipt of a flexible conductor member which is to be wound onto said drum for storage thereon.

2,462,297
APPARATUS FOR SATURATING FABRICS
Floyd W. Adams, Los Angeles, Calif., assignor to Los Angeles Paper Box Factory, Los Angeles, Calif., a corporation of California
Application April 9, 1945, Serial No. 587,253
5 Claims. (Cl. 91—18)



4. Apparatus for impregnating absorbent sheets, comprising ironing platen means having a plurality of saturant circulating channels opening at the surface thereof, and means for moving an absorbent sheet in surface engagement with the platen means to alternately pick up saturant from openings in the channels and iron said saturant into the interstices of the sheet, said platen means including a plurality of the transverse passageways connected to a source to heat at least

one surface of said platen means between and in spaced relation to said channel openings, said latter means comprising an endless perforated conveyor belt,

of said soap carrier, and a conically-shaped cover connected to said drippings receiver of a smaller diameter than said receiver and providing an annular space through which drip-

a front wall; an exposure aperture in said front wall; a rotatable shutter arranged within said camera body behind said exposure aperture; two

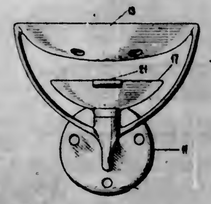
rod and within said tube, inwardly bent edges forming the wall separation of said clip adapted to ride in the groove of said rod for preventing

one surface of said platen means between and in spaced relation to said channel openings, said latter means comprising an endless perforated conveyor belt.

2,462,296
PENCIL VENDING MACHINE
Cletus B. Alexander, Newcastle, Ind.
Application May 23, 1946, Serial No. 671,758
10 Claims. (Cl. 312—64)

1. In a pencil vending machine, a shiftably mounted member transversely grooved in respect to its travel; a pair of hoppers above the member, each hopper opening from its under side directly over the member to permit the member to be shifted across the openings; a roller mounted over said member at the end of each of said openings toward which the member is shifted the maximum spacing of the rollers from the member being approximately less than the radius of the pencils to be vended, and the rollers further being biased toward that spacing; and means for shifting said member groove by groove.

2,462,299
COMBINED SOAP DISH
Milton Applebaum, New York, N. Y.
Application June 25, 1945, Serial No. 601,396
2 Claims. (Cl. 45—28)



1. In a combined soap carrier and soap drippings receiver having independently supported upper and lower members, comprising a bracket-supported and fixed upper soap carrier, a bracket-supported lower drippings receiver, a plurality of arms integral with said bracket and with said carrier, said drippings receiver being removably mounted below said carrier, said arms serving to support said carrier in considerably spaced-apart relation above said receiver and providing air circulation between said members, said carrier having perforations in its bottom in registry with said receiver to permit drainage of said soap carrier, and a conically-shaped cover connected to said drippings receiver of a smaller diameter than said receiver and providing an annular space through which drippings may enter said receiver while being substantially covered.

2,462,300
TAMPERPROOF HINGE OR THE LIKE
Erwin L. Berkson, Chicago, Ill.
Application September 6, 1945, Serial No. 614,684
3 Claims. (Cl. 16—148)

1. In a tamper-proof hinge, the combination of a hinge element embodying a hinge plate portion and a hinge knuckle portion angular to said hinge plate portion, a fastener aperture in said hinge plate portion, a guard portion on said plate portion spaced from said knuckle portion, said guard portion being offset outwardly of the plate in the same direction as said knuckle portion is angled, a slot in said knuckle portion adjacent said plate portion, a cover plate slidable in said slot and under said guard portion, whereby to cover said aperature.

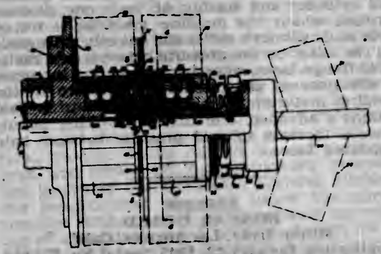
2,462,301
ELECTROLYTIC PRODUCTION OF ALLYL ALCOHOL
Joseph E. Bludworth, Max O. Robeson, and Harry A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application April 12, 1945, Serial No. 588,076
4 Claims. (Cl. 204—77)

1. Process for the production of allyl alcohol, which comprises subjecting acrolein to the cathodic reducing action of a direct electric current in a medium comprising a 1 to 40% by weight aqueous solution of sulfuric acid containing 0.1 to 1% by weight of ferrous sulfate and 0.1 to 1% by weight of zinc acetate while maintaining a cathodic current density of 0.5 to 5.0 amperes per square decimeter and an electrolyte temperature of 60 to 100° F.

2,462,302
SHUTTER CONTROL FOR CINEMATOGRAPHIC CAMERAS
Jacques Bolsey, New York, N. Y.
Application March 26, 1946, Serial No. 657,282
15 Claims. (Cl. 88—17)

1. In a cinematographic camera of the type described, in combination, a camera body having a front wall; an exposure aperture in said front wall; a rotatable shutter arranged within said camera body behind said exposure aperture; two stop means arranged on said rotatable shutter at different distances from the axis of rotation of said shutter; a shutter operating member; and combined mounting means securing said shutter operating member to said camera body so as to be movable not only in the plane of rotation of said two stop means from a position located in the path of rotation of one of said stop means into a position located in the path of rotation of the other of said stop means and back, but to be also movable out of said plane of rotation of said two stop means so as not to block free rotation of either of the same.

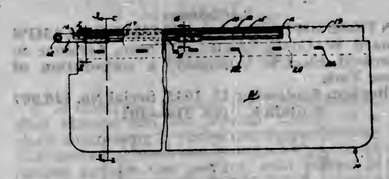
2,462,303
MATERIAL SERVING APPARATUS
Yves A. Bouget, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 23, 1946, Serial No. 711,975
8 Claims. (Cl. 57—16)



1. A material serving apparatus comprising a flyer rotatable about an advancing core, supports for supplies of materials rotatably supported by the flyer concentric with the core, brake units for the supports, guide pins disposed adjacent the core to guide the materials from their supplies to the core, means to cause the brake units to apply equal braking forces on the supplies to create equal known tensions in the materials, an element to support the guide pins, means normally holding the element with the guide pins against movement longitudinally of the core relative to the flyer except during the presence of excess tension in the materials, and means responsive to the longitudinal movement of the pins and element to operate the braking units to reduce the tensions in the materials to their known tensions.

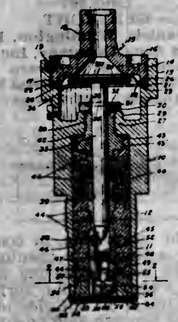
2,462,304
SUN VISOR
Emery F. Burdick, Detroit, Mich., assignor to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application July 18, 1946, Serial No. 684,513
4 Claims. (Cl. 296—97)

2. In combination, a support rod having a longitudinally disposed groove along a peripheral side thereof, stops on said rod disposed in the groove in said rod formed by portions of said rod projecting into the groove, a tubular member sleeve fitted over and supported by said rod, a cylindrically shaped friction clip having a longitudinal separation in the wall thereof positioned on said rod and within said tube, inwardly bent edges forming the wall separation of said clip adapted to ride in the groove of said rod for preventing relative rotation between said support rod and said clip, said inwardly bent edges being capable of engaging said stops for laterally positioning said clip relative to said support rod, an elevated portion on said clip opposite the separation in



the wall thereof for frictionally engaging said tubular member and preventing relative rotation between said clip and said tubular member bounded by semi-circular, radially disposed slots spaced inwardly from the ends of said clip and prongs on said clip, adaptable for gripping said rod, formed by longitudinally disposed slots connecting with the radially disposed slots.

2,462,305
EXPLOSIVE DEVICE
John P. Catlin, Fairfield, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application November 23, 1944, Serial No. 564,748
2 Claims. (Cl. 102—70)



2. An igniter comprising an elongated tubular casing separated between its ends by a partition to define a first chamber and a second chamber; an ignition tube secured to said partition and extending axially substantially through the second one of said chambers; a percussion primer seated in said ignition tube at a point remote from said partition; flash passages communicating between said primer and the exterior of said ignition tube; seal means removable by the primer explosion closing said flash passages; an igniter charge in said second chamber in surrounding relation to the igniter tube; an ignition mixture in contact with said igniter charge surrounding the seal means over said flash passages; an end seal releasably closing the end of the second chamber of said casing over said ignition mixture; a firing pin slidably mounted in said ignition tube in alignment with said primer; shearable means restrain-

ing said firing pin against movement toward said

cylinder's outlet end when said plunger is ad-

2,462,310
WINDING DEVICE

2,462,312
SHOT SHELL
Walter L. Finlay, Fairfield, and Gilbert E. Hutch-

ing said firing pin against movement toward said primer; and pressure responsive means in operative engagement with the end of said firing pin, said pressure responsive means being mounted in the first chamber of said casing and isolated by said seal means from direct communication with said second chamber.

2,462,206
CONTROL SWITCH FOR DISCHARGE LAMPS
Leonard W. Cook, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application September 17, 1945, Serial No. 616,907
6 Claims. (Cl. 315—101)

1. A starter for discharge lamps comprising, in combination, a glow discharge device adapted to pass current when subjected to a predetermined voltage and a magnetic switch having a series connected coil and normally closed contacts, said switch being electrically connected in series with said glow discharge device and being operable upon passage of a single impulse or repeated impulses of current through the device to interrupt the circuit through the starter.

2,462,207
GUN SIGHT
Frederick A. Daniels, Wilmington, Del., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application April 27, 1945, Serial No. 590,611
6 Claims. (Cl. 33—58)

1. A gun sight comprising, in combination, a receiver having a transverse opening in its upper side, a sight member having a base, partially engaged with the outer surface of said receiver longitudinally at one side of said opening, and engaged through said opening and partially engaged with the inner surface of said receiver longitudinally at the other side of said opening, and securing means cooperating between said receiver and said base to secure said base to said receiver.

2,462,208
INJECTION MOLDING MACHINE
Richard W. Dinzl, Westfield, N. J., assignor to The Watson-Stillman Co., Roselle, N. J., a corporation of New Jersey
Application October 25, 1945, Serial No. 624,442
4 Claims. (Cl. 18—30)

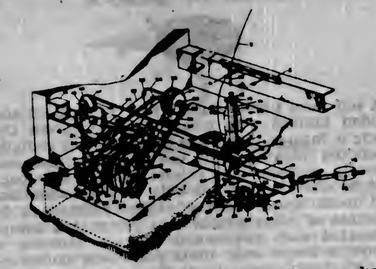
1. An injection molding machine sub-combination comprising an injection cylinder having an open outlet end provided with an inwardly directed flange, an injection plunger in said cylinder for forcing molding material through said cylinder's outlet end when said plunger is advanced thereiowards, and a torpedo pointing toward said plunger inside said cylinder and having a base at said cylinder's outlet end with said base including an outwardly directed flange with the latter's inner face exposed to the inside of said cylinder to receive forwardly directed force from the molding material therein during said plunger's advance and with its outer face registering with the inner face of said cylinder's flange with the latter providing the reaction for said

force, said torpedo being a separate part relative said cylinder and having at least one passage through which the molding material is forced from said cylinder's outlet end but otherwise sealing the latter by the pressure between said registered flange faces, whereby said sealing increases in effectiveness with increasing pressure on the molding material in said cylinder, during said plunger's advance, due to the resulting simultaneous increase in said pressure between said registered faces.

2,462,209
BOXCAR GUARD
Milton Dyke, Los Angeles, Calif.
Application January 22, 1945, Serial No. 573,926
2 Claims. (Cl. 160—368)

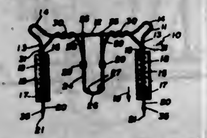
2. A guard for a boxcar doorway comprising a flat pliable guard member of a length sufficient to span across the doorway and to overlap door jambs framing said doorway, tubular means along the upper and lower marginal edges of said guard member, said tubular means each having at least one intermediate opening facing toward the outside of the boxcar, longitudinally spaced tubular means on the outer-facing side of the guard member intermediate the marginal tubular means, and a longitudinal element extending through each tubular means to support the guard member and secured to said door jambs, said longitudinal elements being severable at the mentioned openings in the marginal tubular means and between the spaced tubular means, whereby said guard member is adapted to be bodily removed from the severed portions of the longitudinal elements for subsequent re-use, each longitudinal element comprising a pair of overlapping and connected members, one extending from each door jamb across the door opening.

2,462,210
WINDING DEVICE
William J. Elvin, Frostburg, Md., and Elmer R. Stahl, Meyersdale, Pa., assignors to Celanese Corporation of America, a corporation of Delaware
Application October 2, 1946, Serial No. 700,638
4 Claims. (Cl. 242—43.5)



1. In a device for producing yarn packages having a transfer tail, the combination with a rotating yarn support and a reciprocating ring rail for winding yarn on to said support, of means for reciprocating the ring rail to produce a chaser motion with a traverse stroke of uniform length, means for superimposing a builder motion on said chaser motion by progressively raising the path of the uniform traverse stroke of said ring rail relative to said yarn support and progressively lowering the path of said uniform traverse stroke relative to said yarn support, and means for instantaneously extending the length of the downward traverse stroke of the reciprocating ring rail below the normal traverse stroke thereof, so as to cause the winding of a relatively small amount of yarn on the yarn support at a point spaced from the main body of yarn, said small amount of yarn being available for use as a transfer tail.

2,462,211
COLLAR AND TIE HOLDER
Richard C. Erdmann, Minneapolis, Minn.
Application March 18, 1947, Serial No. 735,464
3 Claims. (Cl. 2—132)



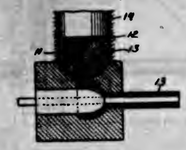
2. A collar and tie holder comprising in combination, an inverted U-shaped member including a mid-portion and a pair of downwardly extending arms, said arms terminating in pointed extremities engageable with collar wings, a downwardly extending and forwardly projectable tongue movably attached at the upper end thereof to the mid-portion of said member, resilient means on said mid-portion for urging said tongue forwardly, and an upwardly and forwardly directed tooth at the lower end of said tongue, said tooth being engageable with a tie knot.

3. The device as defined in claim 2 wherein said means comprises a pair of resilient rod-like extensions on said tongue, said extensions being wound around the mid-portion of said member and anchored to said arms.

2,462,212
SHOT SHELL
Walter L. Finlay, Fairfield, and Gilbert E. Hutchinson, Bridgeport, Conn., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application August 2, 1944, Serial No. 547,696
4 Claims. (Cl. 102—42)

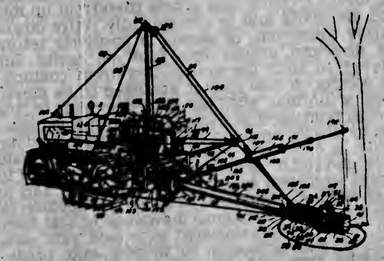
1. A filler wad column positioned between the shot charge and the powder charge of a shot shell comprising a compressible cushioning portion seated against the shot and a piston portion seated against the powder, said piston portion comprising a fibrous felted body substantially completely impregnated with a waxlike lubricating material which will not run at temperatures below 120° F.

2,462,213
LEAD EXTRUSION
Walter K. Freeman, Wakefield, Mass., assignor to Simplex Wire & Cable Co., Cambridge, Mass., a corporation of Massachusetts
Application March 4, 1946, Serial No. 651,729
2 Claims. (Cl. 207—10)



1. The method of charging lead to an extrusion press which comprises cutting and removing substantially the entire upper end surface of the lead remaining from a previous charge to remove dross and oxidized lead therefrom and to provide a clean surface, and introducing into the press in contact with said clean surface a new charge of lead for further extruding operations.

2,462,214
TREE-FELLING CIRCULAR SAW
Clarence V. Fuqua, Vandalia, Ill.
Application September 2, 1944, Serial No. 552,518
7 Claims. (Cl. 142—43)



2. A machine of the character described including a mobile support, a saw unit, a vertical

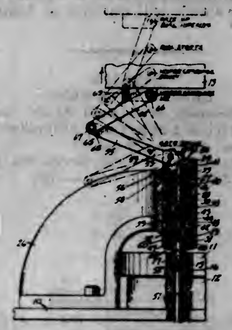
mast having support on the mobile support, a

2,462,215

velope containing spaced electrodes, means con-

mast having support on the mobile support, a boom on the mobile support, a head rotatably mounted on the boom having ways, means slidably mounting the saw unit in said ways in the head, a pulley on the mast, a reel on the mobile support, a cable connected with the boom and operating over the pulley for winding on said reel, means for operating the reel, and hydraulic means supported by the boom and mast adapted to engage objects to be cut by the saw for applying directional force to said objects.

2,462,215
AMMUNITION MAKING MACHINERY
Antoine F. Gagne, Jr., Pompton Lakes, N. J., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application April 27, 1944, Serial No. 533,088
2 Claims. (Cl. 113—59)

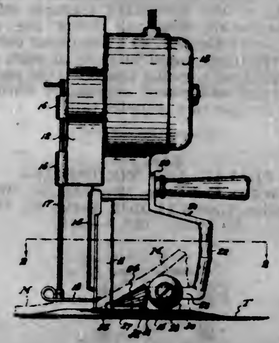


1. In a die press, the combination with a table; article supporting means movably mounted on said table; a gate reciprocably mounted above said supporting means; an under-carriage reciprocably mounted beneath said supporting means; a die having a die cavity fixedly mounted on said table above said supporting means; an article ejector mounted in said die and movable into and out of said die cavity; resilient means arranged normally to project said ejector into said die cavity, said ejector being adapted to be engaged and displaced therefrom by an article thrust into said die cavity from said supporting means; and means carried by said under-carriage constructed and arranged to engage an article in said supporting means to move said article therefrom up into said die cavity and to subsequently retire downwardly therefrom; of means to positively return the displaced ejector into said die cavity and thereby to eject the article therefrom comprising a stem on said ejector arranged to be moved from a normal position corresponding to the normal position of said ejector to a displaced position by displacement of said ejector from said die cavity, a lever arm pivotally supported on said table, one end of said lever arm being arranged to engage said stem in its displaced position and to positively move said stem to its normal position in response to predetermined movement of said lever arm; and means associated with said gate constructed and arranged to impart said predetermined movement to said lever substantially simultaneously with the retirement of said article moving means carried by the under-carriage.

2,462,216
COMPRESSED WIRE MESH UNIT
Alfred M. Goodloe, Montclair, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a corporation of Delaware
Application December 12, 1944, Serial No. 567,892
1 Claim. (Cl. 267—1)

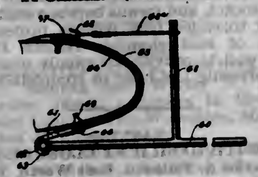
A self form sustaining body of compressed and molded knitted wire mesh fabric, wherein the fabric is formed to provide a plurality of radially extending pleated folds initially upturned and laterally overlapped to extend substantially parallel to the longitudinal axis of the formation, said folds being collapsed upon themselves in direction of their length into compacted interentangled and interlocked relation forming a relatively dense body mass possessing compressible elasticity under loads less than that of the forming pressure or load.

2,462,217
CLOTH LIFTER FOR CLOTH CUTTING MACHINES
Martin Green, Newark, N. J., assignor of one-half to Charles Handler, Newark, N. J.
Application April 12, 1945, Serial No. 587,984
2 Claims. (Cl. 30—275)



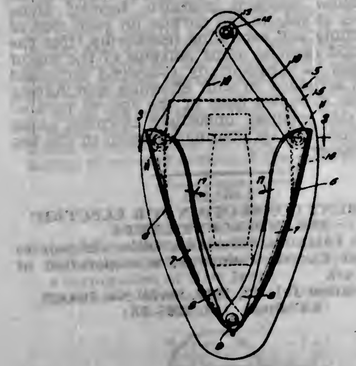
1. In a cloth or like cutting machine having a traction base, a power driven reciprocable cutting knife and a channeled standard rising from said base by which said knife is guided, an upwardly and rearwardly inclined inverted V-shaped plow member mounted with its point overlying said base behind said standard and with its apex aligned in the plane of said knife, whereby to provide downwardly inclined share portions laterally divergent from said apex, and a pair of oppositely and laterally projecting outwardly tapered rotatable rolls mounted behind said plow member with the upper sides of their peripheries somewhat intersecting the planes of the share portions of said plow member, all whereby said plow member lifts and spreads apart the divided marginal portions of knife severed material and leads the same to the support of said rolls.

2,462,218
APPARATUS FOR STRETCHING ELASTIC COVERS
Victor H. Hasselquist, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application January 24, 1944, Serial No. 519,446
14 Claims. (Cl. 254—52)



1. Apparatus for stretching an elastic covering about a curved surface while a margin of the covering is restrained against yielding by securing means engaging said surface, said apparatus comprising means for holding the opposite margin of the covering, and means including a tension element having attachment to said securing means for pushing said holding means in a direction to stretch the covering, said pushing means including said tension element being fulcrumed at said securing means for movement as a unit about said securing means.

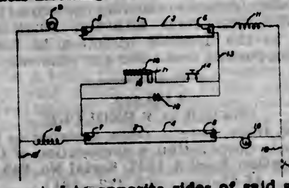
2,462,219
PRESSING IRON RACK
Charles R. Hawkins, Los Angeles, Calif.
Application December 9, 1946, Serial No. 715,095
2 Claims. (Cl. 248—117.1)



1. A pressing iron rack comprising in combination, a pair of shoes pivotally connected together at one end thereof and adapted to removably retain the iron therebetween, a pair of links, and a stationary pivot extending through one end portion of each of said links, the remaining ends of said links being pivoted to said shoes.

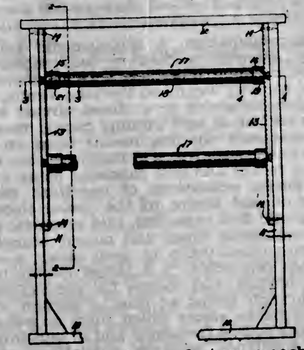
2,462,220
STARTING AND OPERATING CIRCUIT FOR ELECTRIC DISCHARGE DEVICES
William F. Hedge, Lyndhurst, Ohio, assignor to General Electric Company, a corporation of New York
Application December 7, 1945, Serial No. 633,382
5 Claims. (Cl. 315—96)

1. In combination, a pair of gaseous electric discharge devices each comprising a sealed envelope containing spaced electrodes, means connecting said discharge devices in parallel across a source of power with an inductance in series with each discharge device, said inductances be-



ing connected to opposite sides of said source of power, and a starting circuit including switch means connecting said inductances in series across said source of power for starting said devices.

2,462,221
RACK
John E. Holmes, Auburndale, Mass., assignor to Clarence W. Carlson, Atlantic, Mass.
Application December 19, 1945, Serial No. 635,954
1 Claim. (Cl. 211—123)



As a new article of manufacture, a rack of the character described, comprising an upright rectangular frame including a pair of vertical spaced-apart uprights each of which has fixed upon its inner side an elongated vertically disposed metallic channel member whose flanges are seated edgewise against its upright and whose web is formed with a vertical series of spaced-apart stud-receiving key hole slots disposed with their narrower ends lowermost and with each slot horizontally opposite one of the slots of the other channel member; a longitudinally extensible and contractible article-supporting crossbar including a tubular intermediate element having a cap member telescopically and rotatably fitted upon the exterior of one end thereof and a cap member telescopically and fixedly mounted upon the opposite end thereof, one of said cap members being provided upon its outer end with an axial flanged stud adapted to be removably fitted into a slot of one of said channel members and the other cap member being provided upon its outer end with an axial flanged stud adapted to be removably fitted into a slot of the other channel member, and said rotatable cap member being made interiorly with an axial threaded stem projecting into the proximate end of said tubular intermediate element and having threaded engagement therewith so that when ro-

tated relatively thereto in one direction it is ad-

a chamber embracing a portion of said nipple

portion provided with opposed shoulders spaced

engaged by a work-piece entering said passage,

tated relatively thereto in one direction it is adjusted longitudinally thereof in one direction to fixedly clamp the opposite ends of the article-supporting cross-bar to the channel members and so that when rotated relatively thereto in the opposite direction it is adjusted longitudinally thereof in the opposite direction to free said article-supporting cross-bar for removal.

2,462,220
FREQUENCY REDUCER
Henry M. Hugo, Lorain, Ohio, assignor to Lorain Products Corporation, a corporation of Ohio
Application April 8, 1947, Serial No. 740,149
15 Claims. (Cl. 172—281)

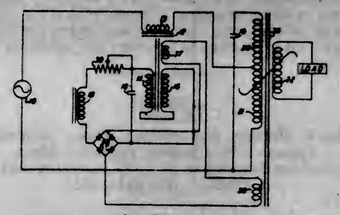


FIG 2

1. In combination, a subharmonic generator and a magnetic modulator, said subharmonic generator comprising saturable magnetic core means, winding means on the core means, a first capacitor connected in a closed circuit with at least a portion of said winding means, means for energizing said winding means from an alternating current source, said magnetic core means, winding means and first capacitor being adapted to maintain oscillations of one-third the frequency of said source in the closed circuit including said first capacitor, said magnetic modulator comprising input and output branches in conjugate relationship to each other, a second capacitor connected in a closed circuit in said output branch, and means for connecting said input branch across at least a portion of said winding means across which there appears voltage of the source frequency and of one-third the source frequency, whereby oscillations of two-thirds the source frequency are produced in said output branch, said magnetic modulator cooperating with said subharmonic generator to start the said oscillations of one-third the source frequency.

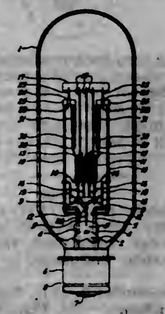
2,462,222
DETACHABLE HOSE FITTING
Peter F. Hurst, Herten, Mich., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich., a corporation of Michigan
Application March 12, 1945, Serial No. 582,356
5 Claims. (Cl. 285—86)

1. A detachable hose fitting comprising a nipple, a socket having a female part and a male part, an interiorly threaded bore in said female part of one diameter into which said nipple is threaded, an internally threaded bore in said female part of a larger diameter into which the male part is threaded, a recess in said female part between said internally threaded bores defining a chamber embracing a portion of said nipple when assembled in said socket and closed at one end by an annular wall of said wall socket part, and into which chamber the end of the hose is inserted to fill the chamber, said male part being internally threaded to provide said socket with a threaded bore portion axially spaced from said chamber to facilitate the insertion of the hose into the socket, and means between said chamber and said threaded bore portion projecting into the end of said chamber remote from said annular wall to provide an axially movable wall for compressing the hose to completely fill said chamber.

2,462,224
SHOE WITH RESILIENT CLOSURE MEANS
Charles A. Julianson, Fort Worth, Tex.
Application January 29, 1946, Serial No. 644,073
2 Claims. (Cl. 36—50)

1. In a shoe construction having an upper with an opening formed in its front instep portion, in combination, opposing channels formed along the edges of said instep portion on each side of said opening and extending rearwardly from the top of said opening along portions of the top of said upper, a substantially U-shaped tensioned member arranged in said channels and having the upper extended ends of the spaced parallel legs of said member oppositely extended along the portions of said channels formed in the top of said upper.

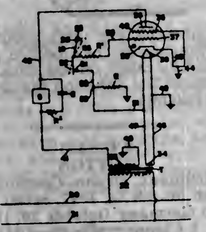
2,462,225
FILAMENT CONNECTION FOR ELECTRIC INCANDESCENT LAMPS
Leroy G. Leighton, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application July 12, 1947, Serial No. 760,627
4 Claims. (Cl. 176—38)



1. In an electric incandescent lamp, the combination of a leading-in conductor having a spud

portion provided with opposed shoulders spaced longitudinally thereof, a filament having an end coil portion fitted over the said spud portion, and a wire compression coil fitted over the said spud portion, said filament end coil and said compression coil being screwed together throughout a portion only of the length of said compression coil and being compressed between the shoulders of said spud portion.

2,462,226
ELECTRIC WEFT DETECTOR FOR LOOMS
John C. Manoog and Walter H. Wakefield, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application September 9, 1946, Serial No. 695,626
16 Claims. (Cl. 139—273)

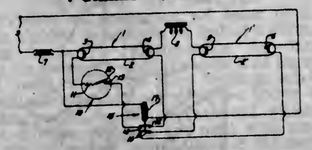


3. In an electric weft detecting system for a loom having an operating electric circuit including an electronic tube and an electromagnetic device which is energized to initiate a change in loom operation when current can flow through the tube, a control grid for the tube, a weft detector, and grid control electric means connected to the grid by the detector and maintaining the grid at such electric potential as will prevent flow of current through the tube when the detector is in normal non-indicating condition, said detector when in weft exhaustion indicating condition disconnecting the grid from said electric means to prevent control of the tube by the grid.

2,462,227
AUTOMATIC DRILL PRESS
John Edwin Mills, East Orange, N. J., assignor to Excel Automatic Products, Inc., Newark, N. J., a corporation of New Jersey
Application October 23, 1945, Serial No. 623,960
2 Claims. (Cl. 77—62)

1. A work-piece holding jig for an automatic drill press comprising a body provided with a longitudinally extending endwise open work-piece holding passage, said body having a drill guideway perpendicular to the axis of said passages, a latch member pivoted by one end to said body to extend along one side of said passage with its free end directed toward the receiving end of said passage, means to yieldably urge said latch member toward said passage, said latch member having a stop projection intermediate its ends adapted to arrest and hold a work-piece in said passage in position to be drilled, said latch member also having a cam nosing at its free end adapted to be engaged by a work-piece entering said passage, whereby to out-swing said latch member so as to withdraw the stop projection for release of a previously drilled work-piece subject to impulsion by said entering work-piece toward the discharge end of said passage, a reciprocable feed plunger longitudinally aligned with said passage, and operative to deliver work-pieces into and for movement in a train through said passage, means to supply work-pieces subject to the operation of said feed plunger, said feed plunger being adapted to penetrate the receiving end portion of the work-piece holding passage so as to advance and hold a work-piece against the stop projection of the latch member in position to be drilled, and said feed plunger having a clearance cavity in its side rearwardly of its end for the reception of the cam nosing of the latch member, whereby to permit in-swinging movement of said latch member to dispose the stop projection in holding relation to the work-piece advanced by said feed plunger.

2,462,228
STARTING AND OPERATING CIRCUITS FOR ELECTRIC DISCHARGE DEVICES
Robert Victor Mills, Maurice George Clarke, and Harold Robert Ruff, Rugby, England, assignors to General Electric Company, a corporation of New York
Application June 9, 1947, Serial No. 753,462
In Great Britain October 31, 1946
7 Claims. (Cl. 315—96)



1. In combination, a supply circuit, a plurality of serially connected electric discharge devices each comprising at least one filamentary electrode and a cooperating electrode, a reactance connected in series relation with said discharge devices across said circuit, and magnetic relay means for starting and controlling the operation of said discharge devices and comprising an actuating coil responsive to the voltage across the serially connected discharge devices and having contacts connected across electrodes of each of said devices.

2,462,229
EVAPORATOR HAVING REFRIGERANT RECIRCULATION MEANS
Harry G. Mejonnier, Oak Park, Ill.
Application January 12, 1945, Serial No. 572,527
15 Claims. (Cl. 62—126)

1. An evaporator for use with refrigerating apparatus comprising a tank structure, a pair of elongated tube members within the tank structure, said tube members being of different size, means for supporting the smaller tube within the larger tube, means forming a gas and liquid refrigerant separator chamber within the tank structure, means interconnected with said chamber for transmitting a refrigerant medium through one of said tubes, said refrigerant transmitting means including means for individually withdrawing gas and liquid phases of the refrigerant from said separator chamber, and means for transmitting a medium to be cooled through the other tube, whereby the wall surfaces of the smaller

tube constitute a heat transfer surface engaged by the refrigerant medium and the medium to be

row softening temperature range and adhesion to rolls at temperatures of 160° C. and above and having incorporated therein from 0.05 to 9 per

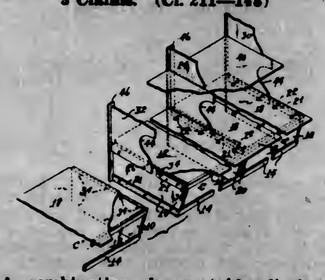
of an internal combustion engine to prevent the passage of electromagnetic waves, air, and water therebetween; said gasket comprising a plurality

operation of the lamp, said electrodes being arranged so that the voltage drop across terminations thereof within said envelope under the influence of preheating current of predetermined

tube constitute a heat transfer surface engaged by the refrigerant medium and the medium to be

cooled to effect an exchange of heat therebetween.

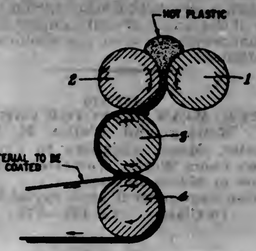
2,462,220
DEMOUNTABLE SHELVING
Otto N. Mueller, Sheffield, Ala., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware
Application May 14, 1946, Serial No. 669,625
3 Claims. (Cl. 211—148)



1. A combination demountable display case and shelving comprising a horizontally disposed case having end panels, spacing members disposed along the lower exterior edge and upper forward edge of each panel, horizontal strut means secured to the upper and lower front edge of each panel for separating said panels, a case cover disposed on and supported by the upper edge of said panels and the upper horizontal strut means, a vertically-extending shelving-supporting member having substantially the same thickness as said upper spacing member and located rearwardly of the latter on the external side of each end panel, a front panel disposed against said strut members and an edge portion of said lower spacing member, and fastening means for securing said end panels and vertical member in rigid assembly.

2,462,231
POLYETHYLENE COMPOSITIONS
Clayton S. Myers, Westfield, N. J., assignor to Bakelite Corporation, a corporation of New Jersey
Application April 13, 1944, Serial No. 530,855
5 Claims. (Cl. 260—23)

1. Product comprising a polymer of ethylene characterized by a crystalline structure of narrow softening temperature range and adhesion to rolls at temperatures of 180° C. and above and having incorporated therein from 0.05 to 9 per cent of a modifying agent selected from the group consisting of polyhydric alcohol esters and metal



salts of monocarboxylic fatty acids having from 12 to 24 carbon atoms, the modified polymer being characterized by ready release from rolls at temperatures above the adhesion temperature of the unmodified polymer.

2,462,232
BUTTON
Jan Neumann, Brunn, Czechoslovakia
Application March 20, 1947, Serial No. 735,904
In Germany October 20, 1941
2 Claims. (Cl. 24—104)

1. A fabric gripping button comprising a first hollow cylinder pointed at the one end and provided with an annular base at the opposite end, a second hollow cylindrical sleeve adapted to slidingly fit over said first cylinder and having a button head attached to its one end and means to secure the said two cylinders at a different fabric gripping distance.

2,462,233
CIGARETTE HOLDER
Harvey O. Newsom, Alameda, Calif.
Application March 1, 1947, Serial No. 731,815
2 Claims. (Cl. 131—259)

2. A cigarette holder, a cone shaped body portion having flat supporting surfaces, a cap secured to said cone, a counterweight pivotally mounted in said cone, a rod engaging said counterweight, and a retainer carried by said rod whereby when a cigarette is positioned in said retainer said counterweight will maintain said cigarette in a substantially vertical position.

2,462,234
RADIO SHIELDING SEALING GASKET
Adrian A. Pierson, Cooperstown, N. Y.
Application June 2, 1944, Serial No. 538,474
2 Claims. (Cl. 174—35)

1. A gasket adapted to be interposed between the body and cover of the ignition distributor

of an internal combustion engine to prevent the passage of electromagnetic waves, air, and water therebetween; said gasket comprising a plurality of strands of bare wire and a plurality of strands of an air and water impervious resilient material closely interwoven together to form a compact, but transversely compressible, cable like structure; said wire strands being in electrical contact with each other, and closely spaced portions of both said wire strands and said strands of resilient material being exposed on the outer sur-

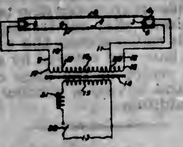
face of said gasket and forming a gasket structure having transverse electrical conductivity between substantially all diametrically disposed points on the surface thereof; whereby said gasket when compressed between two, separate, metallic elements will form a substantially continuous barrier to the passage of electromagnetic waves between said elements, and said resilient strands will cooperate with said wire strands and with said metallic elements to seal the space between said elements against the passage of air and water.

2,462,235
STARTING SWITCH FOR ELECTRIC DISCHARGE DEVICES
Bryson R. Reinhardt, Mounds View Township, Ramsey County, Minn., assignor to General Electric Company, a corporation of New York
Application December 4, 1941, Serial No. 421,537
15 Claims. (Cl. 215—100)

1. A starting switch for a starting circuit of an electric discharge device comprising correlated thermostats, one relatively fast-acting and another relatively slow-acting, responsive to heat always developed when said discharge device is starting and in operation, and toggle switch means for said starting circuit actuated by the heat-responsive movements of said thermostats relative to one another.

2,462,236
ELECTRIC DISCHARGE DEVICE AND METHOD OF OPERATION
Harold Robert Ruff, Rugby, England, assignor to General Electric Company, a corporation of New York
Application April 10, 1946, Serial No. 660,879
In Great Britain May 12, 1945
6 Claims. (Cl. 176—122)

1. In an electric lamp of the discharge type comprising a pair of thermionic electrodes of the filamentary type spaced apart in an envelope, an ionizable atmosphere comprising a rare gas at a pressure of a few mms. and a small quantity of mercury which supplies mercury vapor during operation of the lamp, said electrodes being arranged so that the voltage drop across terminations thereof within said envelope under the influence of preheating current of predetermined value is such as to produce local regions of ionization between said terminations, a layer of fluorescent material on the inside surface of said

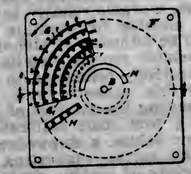


envelope, a strip of conductive material on said envelope extending along the discharge path and terminating in the vicinities of said electrodes to assist in the establishment of an arc discharge therebetween by co-operating with the regions of ionization appearing across the terminations of the filamentary electrodes.

2,462,237
PREPARATION OF UNSATURATED ACID ESTERS
Leon Shechter, East Orange, N. J., assignor to Bakelite Corporation, a corporation of New Jersey
No Drawing. Application August 8, 1946, Serial No. 689,196
6 Claims. (Cl. 260—486)

1. Process of preparing an ester of a polyhydric alcohol consisting of linked hydrocarbons having hydroxyl replacements for hydrogen atoms on different carbon atoms and an unsaturated monocarboxylic acid having conjugated ethylenic bonds and one of these bonds in conjugation with the acidic carbonyl which comprises directly reacting the acid with an excess over stoichiometric proportions of the alcohol in the presence of a strong acidic catalyst and in an organic solvent therefor at refluxing temperature not exceeding 170° C. to thereby yield esters characterized by drying to hard films.

2,462,238
ADDING DEVICE
Mojzesz Sieradzki, Tel Aviv, Israel, now by judicial change of name Moshe Shimrat
Application August 5, 1948, Serial No. 42,630
2 Claims. (Cl. 235—78)



1. In an adding device a number of concentrical superposed discs of increasing diameter, the smallest being uppermost, turnable independently from each other on a common pivot, holes in each disc along its periphery arranged at equal distances from each other in an even number of groups of ten holes, consecutive groups being in staggered order with each other at a smaller distance from the pivot and at a larger one, further holes in the discs below the uppermost one registering with the holes in the discs above, auxiliary discs between every two discs with holes,

such auxiliary discs having holes around their periphery in staggered position with each other and corresponding in distance from the pivot with

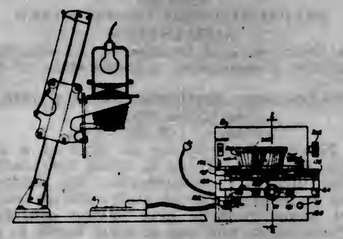
time value of an exposure that said selected point on the easel will receive, and whereby the portion of the stepwedge print adjacent to the corre-

alide rule like computing device is formed, indicating for each selected point of the easel on the light intensity × time scale of the second part a

able with said shaft and alternately engageable with said arms adjacent the pivotal connections of said link to produce simultaneous oscillation thereof.

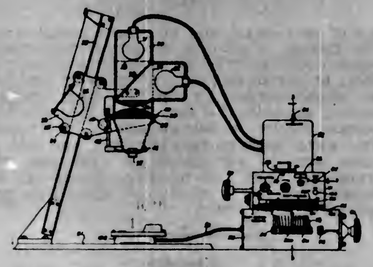
such auxiliary discs having holes around their periphery in staggered position with each other and corresponding in distance from the pivot with the distances of the holes of the groups of the superlying disc, auxiliary plates being interposed between each disc with holes and the auxiliary disc below, such auxiliary plates barring the passage from a hole in an upper disc to the registering hole in a lower disc but freeing this passage along a certain radial sector, the whole set being mounted on a base and covered by a plate exposing to view a sector of the discs corresponding to ten holes, and having a window exposing the result of the addition.

2,462,239
PHOTOELECTRIC EXPOSURE TIME AND PAPER SELECTOR FOR PHOTOGRAPHIC ENLARGERS HAVING SLIDE RULE TYPE COMPUTERS AND STEPWEDGES
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application July 11, 1946, Serial No. 682,724
9 Claims. (Cl. 95—10)



1. An exposure time and paper selector for photographic enlargers of the type which projects an enlarged image of a photographic negative on an easel, comprising a photocell housing, a main housing, and a connecting cable, said photocell housing containing a photoelectric cell, and adapted to be placed on selected points of said easel, said main housing containing electric circuit elements operatively connected through said connecting cable to said photoelectric cell, including a movable element adapted to be moved in accordance to the magnitude of the current passing said cell, and indicating by its position light intensity values, a slide rule like computing device including two input and one output members, movable relative to each other, the first input member representing time values and adapted to be adjusted by the operator, the second input member representing light intensity values and operatively connected to said aforementioned movable element, and the output member representing the product of the two input values on a first scale calibrated in light intensity × time values, a stepwedge unit comprising a movable carrier supporting a plurality of stepwedge prints of various grades of paper, a second scale calibrated in light intensity × time values, and means to bring the stepwedge print of a selected grade of paper into adjacent relationship to said second scale by moving said carrier, whereby each point of said scale indicates the light × time values received by adjacent portions of said print, and means coordinating corresponding points representing like light intensity × time values on both light intensity × time scales, whereby the output element of said computing device indicates on a point of said first light intensity × time scale the light intensity × time value of an exposure that said selected point on the easel will receive, and whereby the portion of the stepwedge print adjacent to the corresponding point of said second light intensity × time scale shows the density of a selected grade of paper that has received an exposure of the same light intensity × time value.

2,462,240
PRINT CONTROL DEVICE FOR PHOTOGRAPHIC ENLARGERS
Alfred Simmon, Jackson Heights, and Louis L. Weisglass, New York, N. Y., assignors to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application October 12, 1947, Serial No. 781,416
22 Claims. (Cl. 88—24)



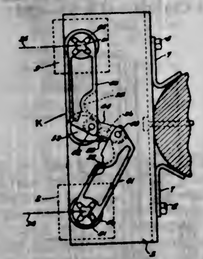
1. A print control device for photographic enlargers of the type that projects an image of a transparency on an easel, said device adapted to perform a density prediction and subsequently a timed exposure, and comprising a photocell housing, adapted to be placed on selected points of said easel and containing a photo-electric cell, a connecting cable, and a main housing composed of two parts, the first part of said housing containing a light intensity indicator including, an electric circuit connected to said photoelectric cell by said cable, a moving element in operative relation with said circuit, and a light intensity scale on which said moving element indicates the light intensity at the selected point of the easel at which said photocell housing has been placed, the second part of said housing containing a stepwedge unit, including a movable support carrying a plurality of stepwedge prints made on different grades of sensitized material, each print containing in systematic arrangement a plurality of areas that received exposures of different light intensity × time values, means to make a selected stepwedge print visible to an observer by moving said support, a light intensity × time scale, and means to indicate on said light intensity × time scale the light intensity × time values received by each area of said visible stepwedge print, one of said two parts of said main housing containing a time switch controlling the time for which said image during a subsequent exposure is projected by said enlarger on said easel, including means to adjust said exposure time, and a time scale indicating the exposure time of said subsequent exposure to which said time switch is adjusted, said main housing comprising means to move said two parts relative to each other, including a mechanism operatively connecting said moving means to the aforementioned adjusting means of said time switch, whereby said time switch is automatically adjusted by moving said two parts of said main housing relative to each other, and whereby a

slide rule like computing device is formed, indicating for each selected point of the easel on the light intensity × time scale of the second part a light intensity × time value obtained as the product of the measured light intensity value indicated on the light intensity scale of the first part, and of the selected time value indicated on the time scale of said time switch, and whereby one area of said visible stepwedge print shows the predicted print density as obtained on the selected grade of sensitized material after an exposure of the same light intensity × time value.

2,462,241
CLEANING COMPOSITION FOR RUST-STAINED LACQUERED SURFACES
Breckinridge Kenney Tremaine, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 24, 1946, Serial No. 699,694
2 Claims. (Cl. 252—106)

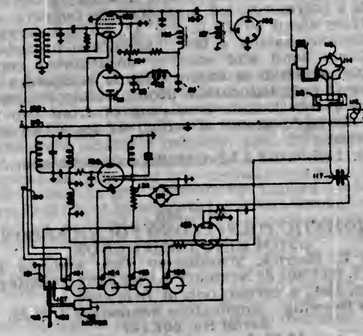
1. A cleansing composition comprising as active ingredients from 10 to 50 parts by weight of oxalic acid (based on the formula of the dihydrate) and from 90 to 50 parts by weight of a composite softening agent which consists of a partially sulfonated saturated aliphatic hydrocarbon having at least 16 carbon atoms per molecule, the degree of sulfonation in said composite softening agent being from 10 to 50% of its total hydrocarbon content.

2,462,242
OPERATING MECHANISM FOR ELECTRICAL SWITCHES
Arthur M. Tregner, East Stroudsburg, Pa., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Original application August 2, 1940, Serial No. 350,836, now Patent No. 2,410,253, dated October 29, 1946. Divided and this application March 29, 1946, Serial No. 657,983
3 Claims. (Cl. 200—153)



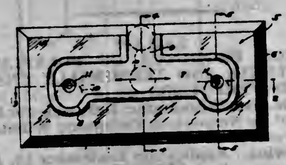
1. In a switch, a pair of switch blades mounted for opposed rotation, lever arms each connected to one of said blades for oscillation in a plane parallel to the plane of oscillation of the other, a link pivotally connected at one end with one of said arms and pivotally connected at the other end with the other of said arms and maintaining said ends in laterally spaced relation, a rotatable shaft disposed below said arms, and cam means rotatable with said shaft and alternately engageable with said arms adjacent the pivotal connections of said link to produce simultaneous oscillation thereof.

2,462,243
REMOTE-CONTROL SYSTEM
Adolph J. Wohlgemuth, Brooklyn, N. Y.
Application August 21, 1944, Serial No. 550,324
17 Claims. (Cl. 250—2)



1. In a remote control system having a control station and a plurality of remote stations, a pair of signaling channels common to all of said stations, means at said control station for transmitting a first signal over one of said signaling channels to initiate an operation at all of said remote stations, and means at each of said remote stations operated in response to said first signal for transmitting a return signal over the other of said signaling channels a predetermined length of time after the reception of said first signal, said predetermined length of time being different for each remote station.

2,462,244
SUPPORT FOR SHIFTABLE CURTAIN RODS
William G. Anderson, Hollywood, Fla.
Application February 18, 1948, Serial No. 9,289
4 Claims. (Cl. 248—264)



1. A curtain rod end support comprising a rectangular shaped flat body portion having its edges bevelled, a guide and support groove formed in the face of the body portion and extending horisontally for the major portion of the body portion, said groove provided with downwardly extending pockets at its extremities, said groove slidably receiving the end of the rod, said rod end slidable in the groove for alternate engagement in the pockets and a vertically arranged groove formed in the face of the body portion and communicating with the first named groove and the outer edge of the body.

2,462,245
MONOMERIC FLUORINE COMPOUNDS CONTAINING A FOUR-CARBON ATOM RING
Paul L. Barrick, Wilmington, Del., assignor to

2,462,248
PIPE JOINT
Roy Batchler, Washington, D. C.
Application March 24, 1944, Serial No. 527,273

that projects into the lower receptacle and terminates at some distance above the bottom of said lower receptacle, and an annular gasket surrounding the upper end of the neck and fitting

2,462,251
AREA MEASURING DEVICE AND METHOD
Marietta Blau, New York, and Jack Raymond Carlin, Brooklyn, N. Y., assignors to Canadian Radium & Uranium Corporation, New York,

2,462,345
MONOMERIC FLUORINE COMPOUNDS CONTAINING A FOUR-CARBON ATOM RING
Paul L. Barrick, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1943, Serial No. 484,239
11 Claims. (Cl. 260—648)

1. A process for preparing monomeric organic fluorine compounds containing a four-carbon ring, said process comprising heating, in contact with a polymerization inhibitor at a temperature of from about 50° C. to 300° C., an unsaturated compound having a terminal carbon-to-carbon multiple bond and another unsaturated compound which is a monoethylenic compound of two and only two carbon atoms having attached thereto substituents consisting of from two to four halogen atoms of which at least two are fluorine.

11. 1-chloro-2,2,3,3-tetrafluorocyclobutane.

2,462,346
AROMATIC POLYFLUORO FOUR-CARBON ATOM RING COMPOUNDS
Paul L. Barrick, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 3, 1943, Serial No. 501,147
13 Claims. (Cl. 260—648)

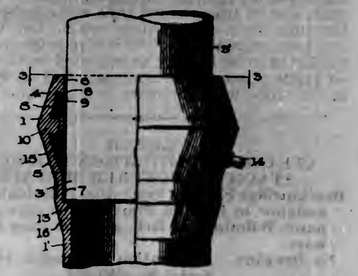
1. A monomeric fluorine-containing organic compound having a four atom ring consisting of carbon atoms, the carbon atom constituting ring position 1 having attached thereto an aromatic group containing not more than three 6-carbon atom rings, the carbon atoms constituting ring positions 2 and 3 having attached thereto four halogen atoms of which at least two are fluorine atoms, and the carbon atom constituting ring position 4 being unsubstituted.

9. The process of preparing an aromatic polyfluorocyclobutane which comprises heating, in the presence of a polymerization inhibitor at a temperature between 50° to 250° C., an unsaturated aromatic compound containing not more than three 6-carbon atom rings and having a terminal methylene group in a side chain of not more than four carbon atoms and one oxygen atom with a tetrahalogenated two carbon atom polyfluoroethylene in which at least two of the halogens are fluorine.

2,462,347
REACTION PRODUCTS OF POLYFLUOROETHYLENES AND TERMINALLY UNSATURATED COMPOUNDS
Paul L. Barrick, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 12, 1947, Serial No. 773,729
20 Claims. (Cl. 260—85)

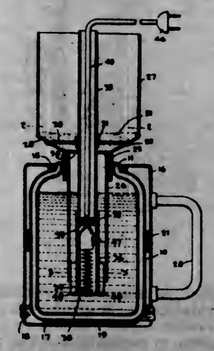
3. A compound having a ring of four atoms consisting of carbon atoms, said atoms comprising a pair of adjacent saturated carbon atoms having as the sole substituents thereon from two to four halogen atoms of which at least two are fluorine atoms, the carbon atom in one of the two remaining positions in said ring being unsubstituted, and the carbon atom in the other of the two remaining ring positions having attached thereto a substituent having a terminal unsaturated carbon joined only to carbon and hydrogen.

2,462,348
PIPE JOINT
Roy Batchler, Washington, D. C.
Application March 24, 1944, Serial No. 527,973
1 Claim. (Cl. 285—115)



A pipe joint, comprising a bell member having its opposite ends reduced in size and forming a socket therebetween, a spigot member axially projecting into the socket of said bell member and substantially conforming in size to the opposite ends of the bell member, a plurality of circumferentially spaced lugs carried by said bell member in axially spaced relation to the reduced opposite ends of the latter and extending radially inwardly therefrom in cooperative supporting relation to the spigot member, said lugs each being provided with a bearing face of substantial area, the outer margins of which overhang the contiguous walls of the bell member and are provided with apertures extending therethrough, a fluent sealing material filling the socket about the spigot member and enveloping the lugs aforesaid, and means for admitting the fluent sealing material through the bell and into the socket thereof.

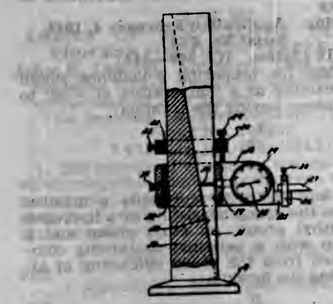
2,462,349
VACUUM TYPE COFFEE-MAKING UTENSIL
Stefano Battiliani, New York, N. Y.
Application November 2, 1945, Serial No. 626,397
2 Claims. (Cl. 99—292)



1. In a vacuum coffee maker having a thermally insulated lower receptacle with a mouth at its upper end, an upper, open-top receptacle with a downwardly extending cylindrical neck

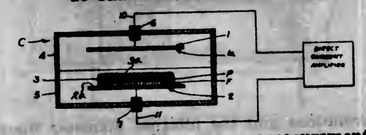
that projects into the lower receptacle and terminates at some distance above the bottom of said lower receptacle, and an annular gasket surrounding the upper end of the neck and fitting within said mouth to seal the space between the neck and mouth, the improvement that comprises a tubular element extending downward through the upper receptacle and into the neck, supporting means extending from the sides of the tubular element and contacting with the bottom of the upper receptacle to support the tubular element in a predetermined relation with respect to the upper receptacle, an annular porous support for ground coffee, said porous support fitting closely around the tubular element below its supporting means and contacting with the bottom of the upper receptacle near the top of the neck, an imperforate cup threaded to the lower end of the tubular element and sealing the tubular element against the entrance of water or steam from the lower receptacle, said cup being of such length that it extends below the bottom of the neck, an electric heating coil housed within the cup, conductors extending from the heating coil upward through the tubular element and out through the top of said tubular element for connection with a source of power, and heat distributing fins extending outwardly from said cup for centering the cup and tubular element at the lower end of the neck.

2,462,350
HEIGHT GAUGE
Joseph Bauer and Anthony Schittelbauer, Detroit, Mich.
Application September 20, 1945, Serial No. 617,572
7 Claims. (Cl. 33—169)



5. A gauge of the class described comprising an elongated bar having a longitudinally extending groove formed in one of its faces and provided with an inclined base; a sleeve slidably mounted on said bar; means for locking said sleeve against slidable movement on said bar; a carriage slidably mounted on said bar; an indicating dial carried by said carriage; an indicating mechanism associated with said dial; a spring pressed plunger for operating said indicating mechanism and extending into said groove and riding with one end in contact with the inclined base of said groove; a contact member carried by said carriage; and threaded means for connecting said carriage to said sleeve for, upon rotation, moving said carriage longitudinally of said bar and relatively to said sleeve; and means for locking said carriage in fixed relation to said bar.

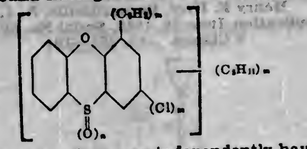
2,462,351
AREA MEASURING DEVICE AND METHOD
Marietta Blau, New York, and Jack Raymond Carlin, Brooklyn, N. Y., assignors to Canadian Radium & Uranium Corporation, New York, N. Y., a corporation of New York
Application October 22, 1946, Serial No. 704,834
16 Claims. (Cl. 250—83.6)



1. A method of making an area measurement of a test body, which consists in applying a difference of potential to electrodes which are spaced from each other and which are separated by an intermediate ionizable medium, said difference of potential being too low to send a brush discharge current through said intermediate ionizable medium, ionizing said medium by applied ionizing rays to produce an ionization current through said medium and between said electrodes which is proportional to the ionization effect of said ionizing rays, and locating said test body in said intermediate ionizable medium between said electrodes to obstruct only a part of said ionizing rays so as to decrease said ionization current between said electrodes, and measuring said decrease.

2,462,352
HEAT STABLE COMPOSITIONS COMPRISING POLYMERIC VINYLIDENE CHLORIDE AND PHENOTHIOXINE OR CERTAIN DERIVATIVES THEREOF
Raymond F. Boyer, Lerne A. Matheson, and Robert C. Reinhardt, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application May 28, 1945, Serial No. 596,402
4 Claims. (Cl. 260—92.5)

1. A composition of matter comprising a polymeric vinylidene chloride product which tends to darken when heated and, as a heat stabilizing agent therefor, from 2 to 10 per cent by weight of a compound having the general formula



where n and each m may independently have one of the values 0 and 1, the sum of the values of the letters m not exceeding 2.

2,462,353
CONTRACTION JOINT ASSEMBLY
Alan E. Brickman, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application December 12, 1946, Serial No. 715,715
3 Claims. (Cl. 94—8)

1. In a transload device for transferring loads between adjacent slabs, the combination including a plurality of dowel members adapted to extend into both slabs, and a support embracing each end of the dowel members, said support comprising a resilient helical coil with the inner end projecting downwardly to form a support for the

dowel and the outer end bent inwardly to form a stop for the dowel, the coil having spaced apart

to be connected to a direct contact condenser, a closed chamber surrounding the outlet end of said tail pipe to receive liquid flowing from said outlet, an air removal means connected to the

group, a monocyclic aryl group of the benzene series, a benzyl group and a β-phenylethyl group; diketones having the formula:

2,462,360
METHOD OF PREPARING LUBRICATING OILS
Paul H. Carnell, Bartlesville, Okla., assignor to

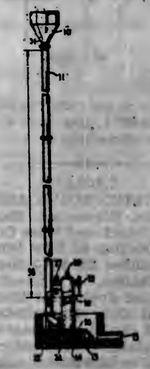
dowel and the outer end bent inwardly to form a stop for the dowel, the coil having spaced apart

convolutions and the internal diameter thereof being slightly less than the diameter of said dowel member to provide a frictional grip thereon.

2,462,254
ORGANIC COMPOUND POLYMERIZATION PROCESS
Merlin M. Brubaker, Delaware County, and Ralph A. Jacobson, Landenberg, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 17, 1942, Serial No. 458,734
17 Claims. (Cl. 260—87)

1. The process for preparing resinous material through polymerization which comprises forming an aqueous dispersion containing a monoethylenically - unsaturated, polymerizable, organic compound having a terminal ethylenic double bond and molecular weight in excess of 30, said aqueous medium containing from about .01% to 5%, based on the total weight of monomers present, of an oxygen-yielding polymerization catalyst and from about .001% to 5%, based on the quantity of monomer, of an inorganic oxidizable sulfoxy compound from the group consisting of sulfur dioxide, sodium bisulfite, sodium sulfite, ammonium bisulfite, sodium hydrosulfite, and sodium thiosulfate, and then maintaining the resulting dispersion at a temperature of from 0° C. to 125° C. until polymerization of the polymerizable components present therein is essentially complete.

2,462,255
CONDENSER
Henry E. Eyer, Bernardsville, N. J.
Application June 26, 1945, Serial No. 601,573
8 Claims. (Cl. 261—19)



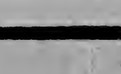
3. A direct contact condensing system including a gravitational barometric tail pipe adapted to be connected to a direct contact condenser, a closed chamber surrounding the outlet end of said tail pipe to receive liquid flowing from said outlet, an air removal means connected to the top of said chamber to separate air and gases from gravitationally flowing liquid in said tail pipe, and an atmospheric seal tank connected to the bottom of said chamber through which liquid is removed, the discharge point from said tail pipe into said seal tank being spaced at all times from the liquid level of said seal tank.

2,462,256
MATRIX BAND
Howard L. Call, Ogden, Utah
Application March 25, 1946, Serial No. 656,940
2 Claims. (Cl. 32—63)

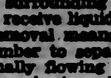
1. A matrix band for dentists comprising a pair of like formed thin metal strips having one widened area and narrow extended legs at one end of said widened area and shorted legs from the other end, the strips to be made to be used in pairs with the narrow legs overlapping and the widened areas set to form a V-space therebetween when the two bands are encircling a tooth.

2,462,257
PREPARATION OF β-LACTONES
John R. Caldwell and Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application February 4, 1948, Serial No. 6,247
16 Claims. (Cl. 260—344)

1. A process for preparing β-lactones which comprises reacting at a temperature of −20° to +60° C. a ketene having the formula:



wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl group with a carbonyl-containing compound selected from the group consisting of aldehydes having the formula:



wherein R_2 represents a member selected from the group consisting of a hydrogen atom, an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a monocyclic aryl group of the benzene series, a benzyl group and a β-phenylethyl group; ketones having the formula:

wherein R_3 represents a member selected from the group consisting of an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a monocyclic aryl group of the benzene series, a benzyl group and a β-phenylethyl group and R_4 represents a member selected from the group consisting of a methyl group, an ethyl group, a monocyclic aryl group of the benzene series, a benzyl group and a β-phenylethyl group; diketones having the formula:

wherein R_5 and R_6 each represents a member selected from the group consisting of a methyl group, an ethyl group and a n-propyl group and m represents a positive integer from 1 to 3; and ketoesters having the formula:

wherein R_7 represents a member selected from the group consisting of a methyl group and an ethyl group, R_8 represents an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4 and m represents a positive integer from 1 to 3 in the presence of 0.5% to 2% by weight, based on the carbonyl-containing compound used of a catalyst selected from the group consisting of alumina, and alumina-silica catalyst consisting of from 5 to 30% by weight of alumina and 70 to 95% by weight of silica, an alumina-silica-zirconia catalyst consisting of from 4 to 30% by weight of alumina, 55 to 95% by weight of silica, and 1 to 15% by weight of zirconia, an alumina-silica-thoria catalyst consisting of 4 to 30% by weight of alumina, 55 to 95% by weight of silica, and 1 to 15% by weight of thoria, and an alumina-silica-boron oxide catalyst consisting of 4 to 30% by weight of alumina, 55 to 95% by weight of silica, and 1 to 15% by weight of boron oxide, and mixtures thereof.

2,462,258
AMIDES OF ACETOACETIC ACID AND PROCESS FOR THEIR PREPARATION
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 21, 1946, Serial No. 678,353
7 Claims. (Cl. 260—404.5)

1. The process of producing acetoacetyl amides which comprises condensing diketene with a compound selected from the group consisting of those compounds which are represented by the following general formulas:

$$H_2N—C_2H_4—NH—COR_1$$

and

$$H_2N—C_2H_4—NH—C_2H_4—NHCOR_1$$

and

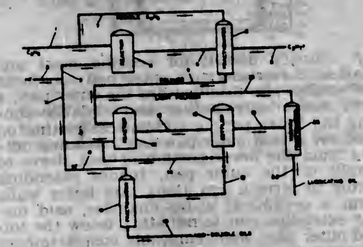
$$R_1CONH—C_2H_4—NH—C_2H_4—NHCOR_1$$

wherein R_1 represents an alkyl radical containing from 8 to 24 carbon atoms.

2,462,259
HYDROFLUORINATION OF UNSATURATED ORGANIC COMPOUNDS
John D. Calfee, Manhasset, and Francis H. Bratton, Floral Park, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application November 22, 1944, Serial No. 564,723
17 Claims. (Cl. 260—653)

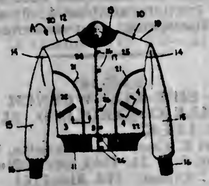
1. In the hydrofluorination of unconjugated, unsaturated aliphatic compounds, the improvement which comprises reacting hydrogen fluoride with the organic compound in the presence of fluosulfonic acid.

2,462,260
METHOD OF PREPARING LUBRICATING OILS
Paul H. Carnell, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application May 28, 1946, Serial No. 671,110
10 Claims. (Cl. 196—13)



4. A method of preparing lubricating oil from an olefin polymer formed as a by-product in the treatment of a low-boiling aliphatic olefin with hydrofluoric acid, said polymer when topped to 400° F. under a pressure of not over 10 mm. of mercury absolute having a viscosity of from 100 to 150 SUS at 100° F. and of from 20 to 50 SUS at 210° F., a viscosity index (Dean & Davis) of not over 20, which comprises treating said polymer with substantially anhydrous hydrofluoric acid in an amount such as to give a weight ratio of hydrofluoric acid to said polymer in excess of 1:1 but not over 10:1, at a temperature of from 75 to 100° C., and a pressure of from 100 to 250 pounds per square inch gauge for a period of time ranging from 20 to 140 minutes such as to produce a substantial improvement in the viscosity index and pour point of said polymer, and recovering the treated olefin polymer from the resulting reaction mixture.

2,462,261
JACKET CONSTRUCTION
Bruno F. Cassens, St. Paul, Minn., assignor to Butwin Sportswear Co., St. Paul, Minn., a partnership
Application December 20, 1946, Serial No. 717,487
7 Claims. (Cl. 2—108)



7. A jacket including front and rear panels, upwardly and outwardly diverging seams in said front and rear panels, and a trim strip anchored in each of said seams, said anchor strips comprising a folded strip of material having a beaded surface possessing relatively high light reflective properties having its longitudinal free edges anchored within the seam and having the folded edge projecting beyond the seam, and a substantially cylindrical flexible member enclosed within said folded edge of said strips.

2,462,262
COMPARTMENTED CULINARY UTENSIL
Esther M. Christensen, Denver, Colo.
Application December 4, 1945, Serial No. 632,660
6 Claims. (Cl. 126—277)

thereof and rockable toward and from the fixed jaw, a stop to limit movement of the second jaw toward the first jaw, a spring to urge said second jaw against said stop, a control member slidably mounted on a longitudinal edge of said body and

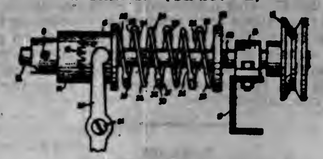
heat to said chamber, openings at the upper and lower ends of the chamber for respectively introducing material to be heated and withdrawing heated material, and a conduit disposed longitudinally of said chamber along its bottom and

each of said tank sections and with said distribution piping, piping connecting the outlet side of said pump with each of said tank sections and with said distribution piping, and valves in said pipings selectively controlling the pumping of

2,462,262
COMPARTMENTED CULINARY UTENSIL
Esther M. Christensen, Denver, Colo.
Application December 4, 1945, Serial No. 632,660
6 Claims. (Cl. 126—277)

3. A culinary utensil for cooking meat and vegetables, comprising: an outer pan; an inner pan of smaller size fitted within the outer pan; a vertical sleeve surrounding and slidably contacting the inner pan; a sub-bottom resting on the bottom of said outer pan and extending outwardly from the lower portion of said sleeve to the walls of the outer pan, thence extending upwardly to form a rim along said latter walls to form a peripheral water chamber, said upwardly extending rim terminating below the top of said outer pan; and removable compartments positioned between the wall of said outer pan and said sleeve supported by said rim above said sub-bottom, the peripheral portion of the bottom of the inner pan being arched upwardly and outwardly forming a water compartment in combination with the bottom of the outer pan below and around the inner pan.

2,462,263
SPRING
John W. Cook, York, S. C.
Application May 28, 1946, Serial No. 672,777
2 Claims. (Cl. 267—1)

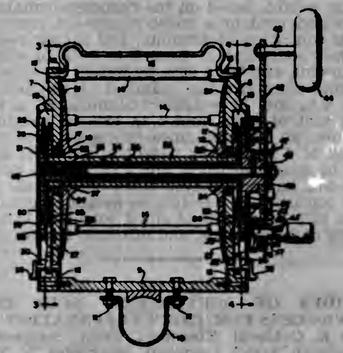


1. A convoluted spring having a plurality of sections connected together by pivoted joints about which the portions of the spring can be pivoted radially outwardly for removal from around the shaft, and can be pivoted radially inwardly for installation around the shaft, the joints in the spring comprising each section having shoulder portions adapted to fit against each other when the spring is in assembled or spiral position.

2,462,264
PIVOTED SIDE-JAW WRENCH HAVING MANUALLY-CONTROLLED SLIDABLE-WEDGE LOCK
Ernest E. Cooper, La Fayette, R. I.
Application July 11, 1947, Serial No. 760,395
1 Claim. (Cl. 81—116)

In a wrench a longitudinal body member having fixed therewith one jaw of a nut receiving recess, a second jaw pivoted to said body member on substantially the longitudinal center line thereof and rockable toward and from the fixed jaw, a stop to limit movement of the second jaw toward the first jaw, a spring to urge said second jaw against said stop, a control member slidably mounted on a longitudinal edge of said body and provided with a surface inclined to said longitudinal body edge, said surface, when said control member is manually moved relative to the body member, engaging the second jaw and urging it toward the first jaw to grip a nut, and a spring to retract said control member when manual pressure thereon is released, whereby said second jaw will swing against the action of its urging spring when the wrench is swung backwards around the nut in order to obtain a new grip thereon.

2,462,265
FISHING REEL
Frank Crawford, Lihue, Territory of Hawaii
Application January 2, 1947, Serial No. 719,668
5 Claims. (Cl. 242—84.6)

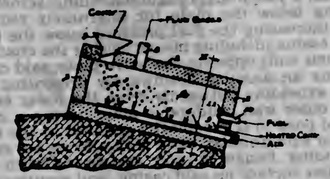


1. A fishing reel having a pair of cheek plates having outer recesses, a seat bar attached to said cheek plates, bearings in said cheek plates, a spool having a sleeve journaled in said bearings and extending outwardly into said recesses, an inner clutch plate on each end of the sleeve, a sectional tubular shaft centrally of the sleeve, means for interlocking the shaft sections, outer clutch plates on the outer ends of the shaft, a hub on one end of the shaft outside of the clutch plate, a crank on the hub, a spindle extending through the hub and shaft and adjustably screw-threaded into the remote shaft section, manually operable means outside the crank for adjusting the spindle, a spring held pawl for each outer clutch plate and a click for each inner clutch plate.

2,462,266
HEATING OF GRANULAR MATERIALS
Caleb Davies, Jr., Ben Aven, and Robert York, Jr., Pittsburgh, Pa., assignors, by direct and mesne assignments, to Pittsburgh Consolidation Coal Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 21, 1944, Serial No. 519,248
4 Claims. (Cl. 263—21)

1. Apparatus for heating granular material comprising a heating chamber having its bottom inclined at an angle slightly less than the angle of repose of the material to be heated, the chamber having side walls flaring outwardly and upwardly from the bottom so that it is of substantially upright V-section, means for supplying

heat to said chamber, openings at the upper and lower ends of the chamber for respectively introducing material to be heated and withdrawing heated material, and a conduit disposed longitudinally of said chamber along its bottom and provided with spaced openings for introducing jets of gas into the chamber to impel granules

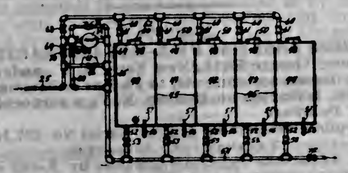


of said material upwardly into the chamber in a direction substantially perpendicular to the axis of said chamber as they pass through it, said gas conduit and heat supplying means being separately and independently associated with the heating chamber so as to establish and maintain a high temperature throughout said chamber.

2,462,267
FREQUENCY MODULATING DEVICE
Lee de Forest, Los Angeles, Calif.
Application January 25, 1945, Serial No. 574,516
7 Claims. (Cl. 315—58)

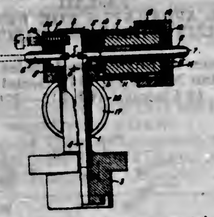
1. In a variable capacitor, the combination of: a pair of spaced electrodes; a dielectric material between said electrodes; an ionizable dielectric medium between said electrodes; means for directing a stream of electrons through said ionizable medium to effect ionization thereof; and means for deflecting said stream of electrons relative to said electrodes to vary the extent to which it is interposed between said electrodes whereby to vary the degree of ionization of the ionizable medium between said electrodes.

2,462,368
APPARATUS FOR PAINTING GAS HOLDERS
Lewis B. Donovan, White Plains, N. Y., assignor to Consolidated Edison Company of New York, Inc., New York, N. Y., a corporation of New York
Application April 12, 1946, Serial No. 661,670
3 Claims. (Cl. 91—56)



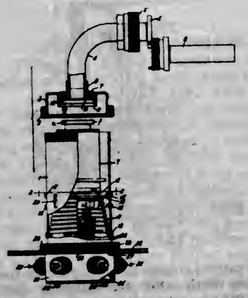
1. Apparatus useful in painting, comprising distribution piping extending to places where a floating layer of paint is to be delivered to and removed from the surface of water, a pump, a paint-holding tank divided into sections by partitions extending upwardly from the bottom of the tank nearly to the top thereof, piping connecting the intake side of said pump with each of said tank sections and with said distribution piping, piping connecting the outlet side of said pump with each of said tank sections and with said distribution piping, and valves in said pipings selectively controlling the pumping of paint from the bottom of any tank section to the distribution piping, from the distribution piping to any tank section and from any tank section to any other tank section.

2,462,369
BEAD THERMISTOR
Frederick H. Drake, Boonton, and Paul B. King, Jr., Mountain Lakes, N. J., assignors to Aircraft Radio Corporation, Boonton, N. J., a corporation of New Jersey
Application October 16, 1946, Serial No. 702,878
14 Claims. (Cl. 201—63)



1. A mounted thermistor comprising a wave guide tube closed at one end and having coupling means at the other end, said tube having alined openings in opposite walls thereof, cover members secured over said openings and each having a quarter-wavelength pocket extending outwardly from the inner surface of the tube wall to which it is secured, wires extending through said cover members axially of said pockets with their adjacent inner ends positioned symmetrically with respect to the axis of the wave guide tube, a thermistor secured to said wires with the bead thereof positioned substantially centrally of the gap between the adjacent inner ends of the wires, means sealing the outer ends of each wire in its supporting cover member, said sealing means insulating one wire from its cover member.

2,462,370
OSCILLATOR TUBE MOUNTING
Frederick H. Drake, Boonton, N. J., assignor to Aircraft Radio Corporation, Boonton, N. J., a corporation of New Jersey
Application October 17, 1946, Serial No. 703,868
14 Claims. (Cl. 178—44)



1. A mounting for a microwave oscillator tube of the type having a flanged top beneath which

there is a wave guide output element of rectangular cross-section, and said top being provided with alinement means; said mounting comprising a shell with an open end, a cover and means for

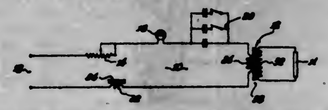
end, means supported on said plate and including inlet valve means and outlet valve means for controlling the flow of fuel through said plate and means sealing said plate to said annular inner

intercept a reflected beam of X-radiation, and means to collimate said reflected beam of X-radia-

port said web during printing, a stencil-screen-carrying frame mounted on said bed and movable to lift said screen out of contact with said web, a squeegee blade to force said color through

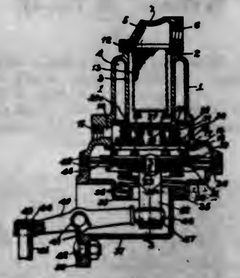
there is a wave guide output element of rectangular cross-section, and said top being provided with alinement means; said mounting comprising a shell with an open end, a cover and means for detachably securing the same upon the open end of said shell, a wave guide tube of rectangular cross-section rigidly secured to said cover, said cover having a passage therethrough of rectangular cross-section forming an extension of the passage of said tube, the inner face of said cover being recessed to receive the flanged top of an oscillator tube, means at the inner face of said cover to engage the alinement means of a tube top to aline the oscillator tube output element with the passage of said cover, a tube socket within said shell, and means supporting said tube socket for limited angular movement.

2,462,271
CONTROL APPARATUS FOR PERIODICALLY ENERGIZING GASEOUS DISCHARGE DEVICES
Homer A. Engle, Los Angeles, Calif.
Application March 19, 1947, Serial No. 735,689
10 Claims. (Cl. 315—276)



1. In combination: a transformer having a primary winding and a secondary winding arranged on a ferromagnetic core; a resonant circuit having an input adapted for connection to a source of A. C. potentials, said resonant circuit including said primary winding and a condenser; a thermally variable impedance means operatively connected with said primary winding for varying the inductance thereof whereby the current in the primary winding is modulated at a pulsation frequency lower than the frequency of said A. C. potentials; and a load circuit connected across said secondary winding and periodically energized at the pulsation frequency by the voltage induced therein from the primary winding.

2,462,272
PUMP
Charles A. Erickson, Dearborn, Mich., assignor, by mesne assignments, to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application June 14, 1944, Serial No. 540,217
12 Claims. (Cl. 103—150)



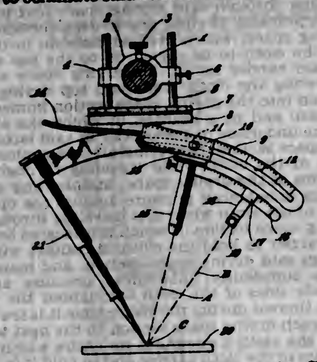
12. A fuel pump comprising a casing having an annular outer wall and an annular inner wall forming chambers one within the other, a valve plate extending across the outer chamber at one end, means supported on said plate and including inlet valve means and outlet valve means for controlling the flow of fuel through said plate and means sealing said plate to said annular inner wall between said inlet valve means and said outlet valve means to prevent the flow of fuel between said chambers except through said valve means, a pump diaphragm extending across said casing below the plate for alternately reducing and increasing the fuel pressure below the plate, said casing including means closing the chambers at their ends opposite the valve plate, said casing having an annular downwardly presenting surface extending outwardly from the lower end of said outer wall, said valve plate having a cylindrical portion telescopically received in the lower end of said annular outer wall and an outwardly extending flange portion registering with said annular surface on said casing, and annular sealing means between said plate and said casing.

2,462,273
JOINING AND REGISTERING DEVICE FOR MOLDING BOXES
Bernard Faure, Neuilly-sur-Seine, France
Application April 19, 1945, Serial No. 589,105
In France May 31, 1944
3 Claims. (Cl. 22—110)

1. In an assembly of plural moulding boxes or the like, each of substantial depth, registering means for said boxes comprising lugs thereon of lengths approximating the depths of their related boxes and having longitudinal bores of substantially similar diameters, and a helical spring extending coaxially into the said bores; the said lugs, when said boxes are assembled, having adjacent end portions in such close proximity to each other and the coils of said spring being at such pitch that at least two diametrically opposed circumferential points of a single coil of said spring, said single coil is in intimate lateral abutting relationship with both said adjacent end portions of the said lugs whereby to restrict the said lugs and their related boxes against material lateral relative movement.

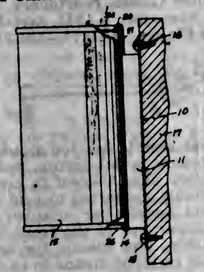
2,462,274
STRESS ANALYSIS BY X-RAY DIFFRACTION
Francis George Firth, New York, N. Y., assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y., a corporation of Delaware
Application October 4, 1944, Serial No. 557,163
12 Claims. (Cl. 250—83.6)

1. Apparatus for stress analysis by X-ray diffraction, comprising an X-ray tube for generating a beam of X-radiation, means to collimate said generated beam of X-radiation into a sharply defined beam of X-radiation, an arc-shaped track arranged for rotary displacement relative to said X-ray tube around an axis defined by the collimated beam of X-radiation, a Geiger-Mueller tube movable along said track and arranged to intercept a reflected beam of X-radiation, and means to collimate said reflected beam of X-radia-



tion before it is intercepted by said Geiger-Mueller tube.

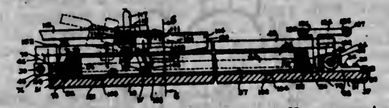
2,462,275
ARTICLE HOLDER
Bartholomew R. Flaherty, Shelton, Conn., assignor to Industrial Metal Products Laboratory, Ansonia, Conn., a partnership
Application October 6, 1945, Serial No. 620,779
3 Claims. (Cl. 248—309)



1. A holder of the character described comprising a flat strip of sheet metal including spaced side portions bent forwardly and then toward each other to form a tubular body adapted to be mounted in an upright position on a support, the lower edge of the front wall being provided with an outwardly and upwardly curved bend to form a seat for the lower edge of an article, a slide mounted in the body provided at its upper end with an outwardly and downwardly curved bend to engage over the upper edge of the article seated in the lower bend, and a coiled spring in the body connected to the body and the slide and tending to shift the slide downwardly to retain its bend over the upper edge of the article.

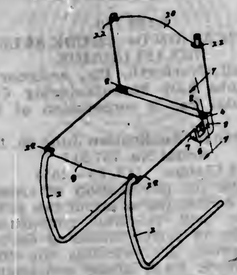
2,462,276
SQUEEGEE SUPPORTING AND GUIDING STRUCTURE
Harry Fleisher, Watertown, Conn., and George H. Tillett, New York, N. Y., assignors to Roto-Matic Screen Printer, Ltd., New York, N. Y., a corporation of New York
Application November 7, 1946, Serial No. 364,694
3 Claims. (Cl. 101—123)

1. In an apparatus for printing color patterns repeatedly upon an elongated web, a bed to support said web during printing, a stencil-screen-carrying frame mounted on said bed and movable to lift said screen out of contact with said web, a squeegee blade to force said color through said screen upon said web, an elongated operating handle connected to said squeegee, a pair of tracks mounted on said frame, a pair of guide



members of inverted U-shape pivotally connected to said squeegee, and embracing said tracks but normally out of contact therewith, whereby the entire weight of said squeegee and handle will be effective to press said squeegee upon said screen, and weight supporting means carried by the squeegee adapted to receive weights whereby additional pressure may be exerted upon said screen.

2,462,277
MODERNISTIC SPRING METAL FOLDING CHAIR
Van Quill Flinn, Waynesburg, Ky.
Application October 24, 1946, Serial No. 705,263
4 Claims. (Cl. 155—148)



1. In a folding chair, a pair of rearwardly opening U-shaped supports formed from tubular spring metal, the rear end of the upper leg of each support being flattened, a forked member pivotally connected to the flattened end of each support, a threaded bolt fixed to the member, a yoke threadedly receiving the bolt, a back post connected to the yoke, and a metal seat having hollow rounded edges rotatably receiving the upper legs of the supports.

2,462,278
NONSKID TIRE CHAIN
Filbert G. Fox, Doylestown, Pa.
Application February 14, 1947, Serial No. 728,613
2 Claims. (Cl. 152—213)

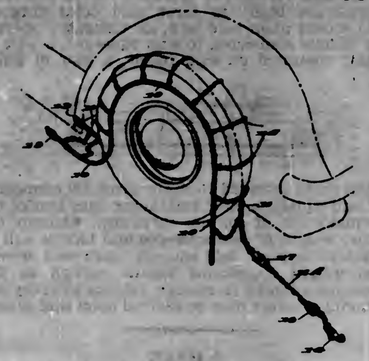
1. An anti-skid tire chain for easy mounting upon the tire of a vehicle wheel comprising a side chain, an enlarged ring carried at one end of said chain, a chain of greater length than said side chain and having an enlarged ring secured at its end adjacent said first mentioned ring and a clamp secured at its other end, a plurality of spaced anti-skid cross members connecting links of said chains at substantially equal distances from said rings to adjacent the other end of said side chain, the remaining free portion of the longer chain having one portion thereof adapted to pass along one side of a tire and be connected to said ring on the longer chain, an intermediate portion

thereof adapted to pass across the tire and be connected to said ring on the side chain to form an additional anti-skid member substantially par-

and having a cloth carrier presenting transverse bars connected in endless chain formation extending through said drying space and presenting a plurality of pins, one in each section of the

by vaporization of the product in said separation zone regulating the amount of vaporization so that sufficient reaction mixture remains in the liquid state to act as a solvent for the hydro-

thereof adapted to pass across the tire and be connected to said ring on the side chain to form an additional anti-skid member substantially par-

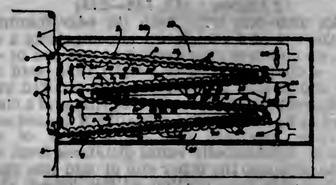


allel to the first-named anti-skid cross members, and an end portion adapted to pass along a side of the tire and be connected to the other end portion of said side chain by said end clamp.

2,462,379
PURIFICATION OF CRUDE SULFUR HEXAFLUORIDE
John F. Gall, Narberth, Pa., assignor to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application June 28, 1947, Serial No. 757,917
8 Claims. (Cl. 23—205)

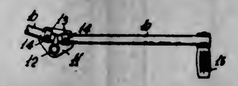
6. A process for purification of crude sulfur hexafluoride containing as impurities at least one water-soluble acid reacting constituent and lower fluorides of sulfur including SF_4, which process comprises first washing the crude gas with an aqueous wash liquor containing from about 30 to 35% by weight of KOH, thereafter heating the gas thus washed to a temperature within the range of about 275 to 325° C., thereafter again washing the gas with an aqueous wash liquor containing from about 30 to 35% by weight of KOH, and drying the gas from the last wash step.

2,462,380
METHOD AND APPARATUS FOR DRYING WEB MATERIAL
Arthur G. Gautreau, Quincy, Mass., assignor to Andrews & Goodrich, Inc., Dorchester, Mass., a corporation of Massachusetts
Application January 5, 1946, Serial No. 639,323
3 Claims. (Cl. 34—24)



1. The method of drying cloth in an apparatus comprising an elongated drying space formed in connecting sections arranged one above another and having a cloth carrier presenting transverse bars connected in endless chain formation extending through said drying space and presenting a plurality of runs, one in each section of the drying space, which method consists in delivering the cloth to be dried on to the top surface of said carrier in the top drying space section, delivering the cloth from said top drying space section into the drying space section immediately beneath and in a position in which the cloth is on the underside of the carrier in said latter drying space section, delivering air jets against both sides of the cloth while traveling through both sections of the drying space, maintaining a sufficiently unbalanced pressure against the opposite sides of the cloth while it is traveling through the drying space section in which it is located beneath the carrier to hold the cloth in contact with the bars in said drying space section, and maintaining a sufficiently unbalanced pressure against opposite sides of the cloth throughout the entire width thereof during the entire time it is traveling from each drying space section to the next to separate the cloth throughout its entire width from the bars of the cloth carrier and to hold it in a free floating condition free from said bars until it enters said next drying space section, whereby the cloth will be delivered in a slack condition to the carrier at the entry end of each drying space section.

2,462,381
SPRING HANDLE BAR FOR MOTORCYCLES AND THE LIKE
Antoine Gasda, Providence, R. I.
Application November 1, 1945, Serial No. 626,058
5 Claims. (Cl. 74—551.2)

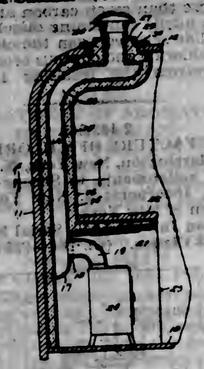


1. A resilient handle bar for motor cycles and the like comprising a flat spring, resilient means arranged on two sides thereof in contact therewith and yieldably connected to said sides, holder means for said handle bar adapted for attachment to the upper end of the front wheel shank of a motor cycle, and means for securing said spring and said resilient means to each other and to said holder means.

2,462,382
TURNBUCKLE
Paul G. Gleason, Van Nuys, Calif.
Application December 7, 1945, Serial No. 633,238
15 Claims. (Cl. 287—60)

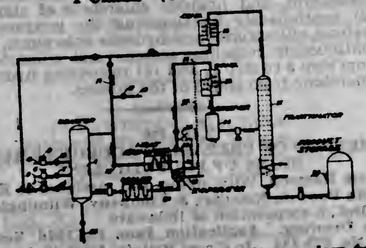
3. A turnbuckle structure comprising two similar bodies, each of said bodies carrying an arm having an end portion which is offset laterally opposite to the arm of the other, and a connecting link one end of which is pivotally related to the offset end portion of one of said arms in a permanent manner, the opposite end of said link carrying a hook for detachable pivotal connection with the offset end portion of the other of said arms wherein the two similar bodies are rendered completely separable from each other.

2,462,383
TRAILER CHIMNEY
Lester C. Goodwin, Harvard, M. Y.
Application September 13, 1944, Serial No. 553,821
2 Claims. (Cl. 126—56)



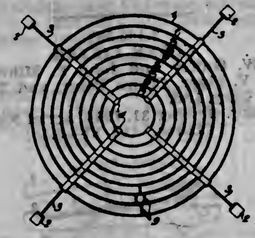
1. A trailer chimney adapted for conveying the products of combustion from a heater located within a trailer to the exterior of the trailer, said chimney including spaced inner and outer walls and a filling of insulating material disposed therebetween for retaining the walls in properly spaced relationship relatively to one another, said chimney being fixedly attached to the interior of walls of the trailer throughout substantially its entire length, and a hood forming an integral extension of at least one wall of the chimney and adapted to be disposed over the heater.

2,462,384
RECOVERY OF PRODUCTS OF HYDROCARBON CONVERSION REACTIONS
Manuel H. Gerin and Will Swerdloff, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application November 13, 1945, Serial No. 628,296
1 Claim. (Cl. 260—683.4)



That the method of conducting a low temperature hydrocarbon conversion reaction in which at least one reactant is a hydrocarbon, which comprises conducting the reaction in a reaction zone in the presence of at least one liquid hydrocarbon, said liquid hydrocarbon having dissolved therein a hydrocarbon soluble compound that is a catalyst for the desired reaction, withdrawing liquid reaction mixture containing reactant, product and dissolved catalyst from said reaction zone, feeding the withdrawn reaction mixture to a separation zone, producing a phase difference between catalyst and product by vaporization of the product in said separation zone regulating the amount of vaporization so that sufficient reaction mixture remains in the liquid state to act as a solvent for the hydrocarbon soluble catalyst, separating the product containing vapor from the liquid catalyst containing material, compressing the product vapor to a pressure at which at least some of the vapor will condense under the temperature conditions in the separation zone, passing the compressed vapor in heat exchange relation with the material in the separation zone, whereby at least some of the vapor is condensed and its heat of condensation is available to aid in the vaporization, and recycling the catalyst containing phase to the reaction zone for admixture with and use in the conversion of fresh reactant.

2,462,385
CONSTRUCTION OF STRUCTURAL MEMBERS
Douglas Harold Green, London, England
Application April 1, 1946, Serial No. 658,688
In Great Britain April 4, 1945
9 Claims. (Cl. 72—109)



1. Means for supporting building structure, comprising a series of load supporting torsion elements, being constructed as an independent unit of closed geometrical form, said elements being arranged concentrically in relation to one another and having depth in an axial direction to impart the required torsional rigidity and linkage members connecting adjacent members to maintain them in spaced relationship to one another, said linkage members being constructed to operate in tension and substantially without any beam action.

2,462,386
TOOL ASSEMBLY
Harry M. Griffin, Webster Groves, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 18, 1945, Serial No. 587,836
10 Claims. (Cl. 77—55)

1. A quick change tool chuck assembly, comprising a housing, an opening in one end of said housing arranged to permit the projection of a tool therefrom, a tool holder slidably and rotatably disposed in said housing and with one end thereof adjacent to the opposite end of said housing, a clutch member on said end of said tool holder, a first stop member fixedly disposed in said housing and serving to limit the sliding movement of said tool holder in the direction of its said end, a second stop member disposed on said tool holder adjacent its said end, a bearing assembly slidably and rotatably disposed between said tool holder and said housing and limited in its travel towards said end of the tool holder by said second stop mem-

ber, and spring means within the housing between said first stop member and said bearing

lected from the group consisting of the dichloro and dibromo addition products of 1,3-butadiene with an alkali metal cyanide in a liquid organic nitrile free from aliphatic unsaturation and con-

of said persulfate, and continuing the reaction until absorption of the ethylene substantially ceases, the aqueous dispersion directly obtained by said process containing as the sole agent ef-

form a coil thereabout, traverse means shiftable to guide said wire while being deposited on said support, reversible drive means for said traverse means whereby said traverse means is moved

ber, and spring means within the housing between said first stop member and said bearing

assembly serving to urge said tool holder in the direction of its said end.

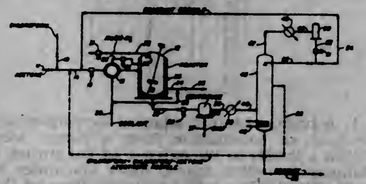
2,462,287
COVER LIFTER
Wayne W. Guffey and John P. Mihelic, Gary, Henry V. Piper, Crown Point, and Thor Engstrom, Gary, Ind.
Application October 21, 1944, Serial No. 561,224
3 Claims. (Cl. 81—3.46)

1. A cover lifter comprising a base member of extensive area adapted to fit within the top of a cover of a type having an upstanding rim, the top edge of which is outturned, said base member having an abutment projecting upwardly from one edge thereof, said abutment being disposed generally at right angles to the base member and conforming generally to a segment of the edge of the cover to be lifted, said base member extending from said abutment to a point near the diametrically opposite edge of said cover, a lever pivoted intermediate its length to the upper side of the base member for movement in a plane at right angles to the base member, the end of said lever adjacent the abutment carrying a clamping member pivoted thereto for movement in the plane of movement of the lever, the outer end of the clamping member being formed in the shape of a generally downwardly extending pointed hook, said hook being inturned toward and cooperating with the abutment when the latter is positioned adjacent the inner edge of the cover to grip the upper portion of the cover edge between the hook and the abutment.

2,462,288
PREPARATION OF 1,4-DICYANO-2-BUTENE
Glenn F. Hager, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 13, 1947, Serial No. 728,382
11 Claims. (Cl. 260—465.8)

1. A process for preparing 1,4-dicyano-2-butene which comprises reacting a member selected from the group consisting of the dichloro and dibromo addition products of 1,3-butadiene with an alkali metal cyanide in a liquid organic nitrile free from aliphatic unsaturation and consisting solely of nitrile nitrogen, hydrogen atoms and not more than seven carbon atoms, said liquid organic nitrile containing dissolved therein a cuprous halide selected from the class consisting of cuprous chloride and cuprous bromide, and isolating therefrom the resulting 1,4-dicyano-2-butene.

2,462,289
MANUFACTURE OF CHLORETONE
George A. Harrington, New York, N. Y., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application July 20, 1946, Serial No. 686,878
8 Claims. (Cl. 260—633)



1. The continuous process for the manufacture of hydrous chloretone from acetone, chloroform, and water which comprises the steps of (1) continuously reacting in a conversion zone at a temperature within the range of from about +10° C. to about −40° C. a mixture of acetone and chloroform containing from about 3.0 to about 8.0 mols of acetone per mol of chloroform in the presence of a quantity of aqueous solution of a catalyst consisting of an hydroxide of a metal of the left-hand series of group I of the periodic table sufficient to provide from about 0.01 mol to about 0.10 mol of said hydroxide per mol of chloroform in said mixture to form a reaction mixture comprising hydrous chloretone, unreacted acetone, unreacted chloroform, and metallic chloride suspended therein, (2) continuously separating said metallic chloride from the mixture of acetone, chloroform, and hydrous chloretone of step 1, (3) continuously fractionating the mixture of acetone, chloroform, and hydrous chloretone, (4) continuously recycling acetone and chloroform from step 3 to step 1, and (5) recovering hydrous chloretone from step 3 of the process.

2,462,290
METHOD OF PREPARING AQUEOUS EMULSIONS OF POLYETHYLENE
Jesse Harmon, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 10, 1946, Serial No. 675,833. In Great Britain April 25, 1946
4 Claims. (Cl. 260—29.6)

1. A process for polymerizing ethylene in aqueous medium and directly obtaining the resulting ethylene polymer in the form of a stable dispersion in the aqueous medium, said process comprising subjecting ethylene as the sole polymerizable constituent to polymerizing temperature and a pressure of from 200 to 1000 atmospheres in intimate contact with a buffered aqueous solution of an alkali persulfate having a pH between 7.5 and 11 and containing from 3% to 20%, based on the weight of the water present, of said persulfate, and continuing the reaction until absorption of the ethylene substantially ceases, the aqueous dispersion directly obtained by said process containing as the sole agent effecting the stabilization of said dispersion the surface active agent formed in situ during polymerization of the ethylene in contact with said aqueous solution of persulfate.

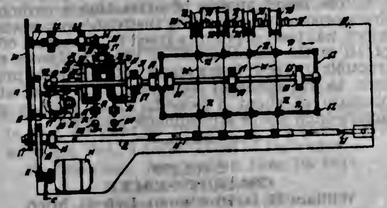
2,462,291
TREATMENT OF AROMATIC HYDROCARBONS
Howard D. Hartough, Pitman, N. J., Alvin I. Kosak, Columbus, Ohio, and Ebenezer E. Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application January 23, 1946, Serial No. 642,978
20 Claims. (Cl. 260—674)

1. A method for removing thiophenic contaminant from an aromatic hydrocarbon containing the same, comprising the addition thereto of an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids and a porous, adsorptive silica-zirconia catalyst, reacting the resulting mixture to effect acylation of said thiophenic contaminant and thereafter distilling to yield said hydrocarbon free of said contaminant.

2,462,292
FLUID PUMP
Charles F. Hautau, Huntington Woods, Mich., assignor, by mesne assignments, to Appliance Development Company, Oak Park, Mich., a corporation of Michigan
Application September 9, 1946, Serial No. 695,750
12 Claims. (Cl. 230—130)

1. A fan comprising a circular plate formed with a plurality of tear drop shape recesses formed therein, each of said recesses having inclined side walls along the widest section, the inclination of the side walls gradually being reduced as the width of the recess is reduced.

2,462,293
COIL-WINDING MACHINE
Nathan M. Haynes, New York, N. Y.
Application May 4, 1945, Serial No. 591,872
11 Claims. (Cl. 242—9)



1. A coil winding machine comprising a rotatable support for a coil to be wound, drive means for said support, a wire supply, means to deposit wire from said supply to said support so as to form a coil thereabout, traverse means shiftable to guide said wire while being deposited on said support, reversible drive means for said traverse means whereby said traverse means is moved back and forth to produce superimposed coil layers, said reversible drive means comprising a pinion gear and a pair of bevel gears oppositely driven by said pinion gear, a screw shaft, each of said bevel gears being rotatable around and free of said screw shaft, a pair of electro-magnetic disks, each of said electro-magnetic disks being secured to one of said bevel gears so as to be rotatable therewith, a pair of clutch disks keyed to said screw shaft, each of said clutch disks being mutually separated by and facing said electro-magnetic disks so as to be in respective operative relation thereto, an electrical contact ring rotatable with each of said electro-magnetic disks and adapted to transmit electric potential for energizing its associated electro-magnetic disk, a brush member bearing against each said contact ring for supplying said potential thereto, means to energize each electro-magnetic disk alternately according to the dimensions of the coil to be formed whereby said shaft is driven alternately in opposite directions, and means to translate said alternate movements of said shaft into said back and forth movements of said traverse means.

2,462,294
DISPENSING MECHANISM
Sidney J. Heiman, St. Louis, Mo.
Application February 12, 1945, Serial No. 577,419
1 Claim. (Cl. 312—48)

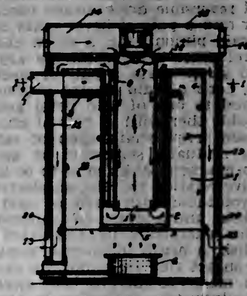
In a dispenser for bottles, a magazine having an upper portion for storing a plurality of bottles in direct interengagement substantially horizontally one above the other and having an open end through which the bottles may drop, said magazine having a lower portion with a bottle-delivery opening spaced below said aforesaid open end, a rotary control member between said open end and delivery opening to carry bottles therebetween to the latter and comprising a substantially S-shaped member provided with a pair of diametrically spaced circumferentially extending oppositely directed bottle-receiving jaws in which said bottles may seat, there being bottle-engaging cam surfaces leading from the exterior of one jaw to the under side of the other jaw to define said S-shape, the outer periphery of said carrier member receding gradually toward the rotational axis of the member from adjacent each jaw toward its tip, and with the tips of the jaws extending circumferentially beyond the bottle seats of the jaws, whereby the stored bottles will be lifted slightly and then lowered as they are actuated from below by said carrier member, and whereby when the bottom bottle in the magazine falls through said open end of the upper portion it is spaced from the throat of the adjacent jaw and is subsequently engaged by the latter and carried to said delivery opening.

2,462,295
CONCENTRIC SHELL HOT-AIR HEATER
Sidney J. Heiman, St. Louis, Mo.
Application February 12, 1945, Serial No. 577,420
1 Claim. (Cl. 312—48)

In a heater, a pair of spaced apart heat-exchange members each comprising a pair of spaced apart frames, a plurality of wires extending between the frame of each pair along one edge and the other frame along its opposite edge, a plurality of wire bending elements including parallel spaced arcuate portions adapted to serve as seats for conduits, reinforcing webs joining the top and bottom walls in the area adjacent the

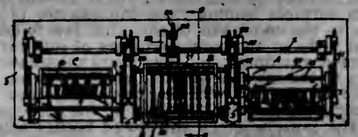
a polyvalent metal halide Friedel-Crafts catalyst under autogenous pressure at a temperature between 0° and 180° C.

2,462,208
CONCENTRIC SHELL HOT-AIR HEATER
Sidney J. Heisman, St. Louis, Mo.
Application April 11, 1945, Serial No. 587,630
1 Claim. (Cl. 126—126)



In a heater construction for discharging heated air into a room at substantially floor level, concentrically spaced upright inner and outer walls, a closure across the tops of said walls, and a closure across the bottom of said inner upright wall to thereby provide a combustion chamber enclosed by said upright walls and top and bottom closures, a pair of shells concentrically positioned relative to said upright walls, one of said shells being exteriorly of and spaced from said outer upright wall and the other shell being interiorly of the inner upright wall, said last-mentioned shell having an open lower end terminating above said bottom closure, said outer shell having a cold air inlet thereinto, and the space within said outer upright wall having a hot air outlet therefrom, means for entraining air from said one shell downwardly into said inner shell so that the same will travel in reversed directions in sequence along the inner and outer side of the innermost shell and in a direction then reversed from the last-mentioned of said reversed directions along the outer wall of said outer upright wall, and an upright heat-conducting corrugated element arranged between said innermost shell and the adjacent wall surface of the inner of the upright walls and carried by the latter and entirely spaced from the innermost shell and having passages through which said air is guided therepast, said corrugated element engaging only said adjacent wall entirely above the bottom of the innermost shell to conduct heat directly to the air flowing in contact therewith.

2,462,296
WIRE STRAIGHTENER
Richard D. Heller, Tujunga, Calif.
Application May 10, 1946, Serial No. 668,789
9 Claims. (Cl. 140—148)



5. A wire straightener comprising a plurality of pairs of marginal frames, the frames of each pair being disposed side by side in parallel planes, and the frames of each other pair being disposed similarly, but in planes at an angle to the planes of all other pairs, means pivotally mounting one frame of each pair along one edge and the other frame along its opposite edge, a plurality of wire bending elements including parallel pintles arranged transversely of the pivot means in each frame, the wire bending elements in the group of one frame of each pair alternating with those of the group carried by the other frame, all said wire bending elements in one pair of frames being arranged to define a sinuous path in a common plane transverse to the planes of the frames, and the several pairs of frames being aligned in such manner that their wire bending elements define a path generally aligned throughout, but sinuous in planes varying with the relative angularity of the respective pairs of frames, and means engaged with the swinging edge of each frame, and movable to shift all said frames simultaneously towards or from the pivoted edge of the paired frame.

2,462,397
ASH RECEIVER
Cornelius Hendricks, Grand Rapids, Mich., assignor to Applied Arts Corporation, Grand Rapids, Mich., a corporation of Michigan
Application August 26, 1944, Serial No. 551,465
3 Claims. (Cl. 45—77)

1. A device of the class described comprising, a drawer, a bottomless support comprising a top horizontal member and two vertical side members embracing the upper part of said drawer and entirely out of contact therewith, track means on the sides of said drawer near the upper part thereof having opposite inclined surfaces, rollers on the vertical members of said support traversably engaging said track surfaces and spring pressed means coacting between the drawer and support acting to thrust the rollers and track surfaces into engagement.

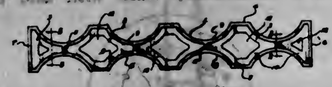
2,462,398
IRISH MOSS EXTRACT AND ITS PRODUCTION
Mattie P. Hess, Maywood, and Arthur E. Siehrs, Chicago, Ill., assignors, by mesne assignments, to Krim-Ko Corporation, Chicago, Ill., a corporation of Illinois
No Drawing. Application March 1, 1945, Serial No. 580,402
5 Claims. (Cl. 99—142)

4. The novel process of extracting a carbohydrate product by subjecting the Irish moss residue, which has been previously freed from at least 80% of all of the constituents of the Irish moss extractible by fresh hot water at atmospheric pressure, to the action of supersaturated steam at a pressure of about 5 pounds to 50 pounds per square-inch above atmospheric pressure.

2,462,399
CONDUIT SPACER
William H. D. Hinchman, Detroit, Mich.
Application September 16, 1944, Serial No. 554,513
1 Claim. (Cl. 248—49)

In a spacer for conduits comprising a closed frame member having top and bottom walls with

exposed arcuate portions adapted to serve as seats for conduits, reinforcing webs joining the top and bottom walls in the area adjacent the mid-section of the opposed arcuate portions, said webs extending in a plane perpendicular to the plane of the top and bottom walls and extending throughout the inner periphery of said frame, the webs separating in the area of the top and bottom walls adjacent the ends of the arcuate seats whereby openings are provided through the spacer in the area between the mid-sections of the arcuate portions.



2,462,400
COPOLYMERS OF DIHYDRODICYCLOPENTADIENYL METHACRYLATE WITH ESTERS OF METHACRYLIC ACID
Fred W. Hoover, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 17, 1946, Serial No. 684,253
3 Claims. (Cl. 260—84)

1. A copolymer containing from 20 to 50% of dihydrodicyclopentadienyl methacrylate and from 80 to 50% of an ester of methacrylic acid with a saturated aliphatic monohydric alcohol having from 8 to 18 carbon atoms.

2,462,401
METHOD OF KNITTING
Elvira Johnson, Martinez, Calif.
No Drawing. Application April 24, 1947, Serial No. 743,723
1 Claim. (Cl. 66—171)

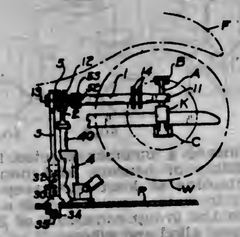
The method of knitting a sweater or the like including a pocket knitted simultaneously therewith, consisting of knitting several rows of a portion of the garment in one layer, then knitting a row to a point where the pocket is to be formed, when reaching said point double knitting to form the closed bottom of the pocket, knitting two separate layers to form a pocket which pocket is knitted at its side edges to the first mentioned layer, continuing the knitting of the two said layers until the pocket is fully formed and an opening for a pocket provided, and thus forming the fully formed pocket on the exterior of the garment which is closed at its bottom and knitted to the garment at its sides and is open at its top and continuing the knitting of the rows constituting the first mentioned layer of the garment until the same is completed.

2,462,402
FLUORINATED HYDROCARBONS
Robert M. Joyce, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 30, 1945, Serial No. 602,683
2 Claims. (Cl. 260—653)

1. A process which comprises contacting tetrafluoroethylene with a polyhalogenated methane containing at least one chlorine atom and no more than two fluorine atoms in the presence of a polyvalent metal halide Friedel-Crafts catalyst under autogenous pressure at a temperature between 0° and 150° C.

8. The chemical compound, 1,3-dichloro-1,2,2,3-pentafluoropropane boiling at 51-53° C. (n_D^{30}, 1.3262; d_4^{30}, 1.5492).

2,462,403
CAMBER ADJUSTING TOOL
Homer V. Jungst, Seattle, Wash.; Mary J. Jungst executrix of said Homer V. Jungst, deceased
Application August 6, 1945, Serial No. 609,177
13 Claims. (Cl. 153—32)



1. Means for adjusting wheel camber, comprising a torque bar slotted inwardly from one end to straddle the spindle support arm, and when so engaged extending generally horizontally in a forward and rearward direction, means to retain the distant end of said torque bar against displacement, and a lever arm connected by one end to said bar outwardly of its torque axis, thence extending beneath and fulcrumed by said torque bar, for engagement of its opposite end by an upwardly acting jack to produce a bending torque in said torque bar, at the engaged spindle support arm.

2,462,404
TRACTOR TRAILER
George B. Kahres and Martin H. Kahres, Lansing, Mich.
Application December 26, 1945, Serial No. 637,150
2 Claims. (Cl. 214—83.18)

1. A tractor trailer comprising in combination, a box body, said body having a continuous plate bottom, a wear take-up frame adjusting the taut of the said bottom said body provided with pivotal vertically arranged closures at the ends of the body, side chains provided with sprockets and axles carried by the said body, a power take off at the end of the said body constructed and arranged to take power from a tractor, the said power take off being provided with sprocket and chain connection devices whereby the said chains are operated, and the said side chains having spaced transverse angle irons arranged to sweep the said plate bottom of the said body and clear the said plate of chopped hay thereon, said body having supporting wheels and axles.

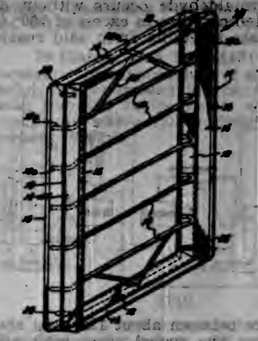
2,462,405
BUILDING CONSTRUCTIONS
Joseph S. Nagel, Santa Ana, Calif.
Application May 10, 1946, Serial No. 668,788
4 Claims. (Cl. 52—309)

discharge tubes each having at least an anode, a cathode and two control grids, means for apply-

ward end, the body having two air passages terminating in the flat annular surface with outlets spaced circumferentially apart but at points

sages extending in one direction for conducting a first fluid that is above ambient temperature and having a second set of generally flat parallel pas-

2,462,413
BUILDING CONSTRUCTION
Joseph S. Nagel, Santa Ana, Calif.
Application November 30, 1944, Serial No. 566,262
10 Claims. (Cl. 72—169)



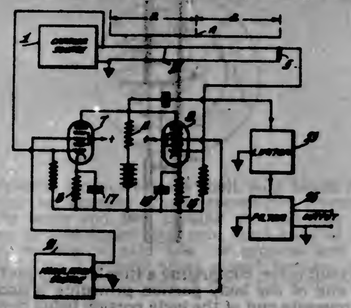
1. A building unit of the character described comprising a cementitious body, a non-cementitious marginal member bonded to said body and doubled inwardly thereof to form an elongated recess, a reinforcing member embedded in the body and extending through one side of the doubled portion of the marginal member into the recess to tie said marginal member to the body, and a locking member received within said recess and secured to said reinforcing member therein.

2,462,416
CAN OPENER
Arthur E. Nelson, University City, Mo.
Application June 23, 1945, Serial No. 601,263
4 Claims. (Cl. 30—9)

3. In a can opener, a frame, a drive shaft mounted thereon, a first gear on the drive shaft, a feed disc on the drive shaft, a bracket movably mounted on the frame, a shaft on the bracket extending downward at an angle toward the drive shaft axis, a hub on the angularly extending shaft, a cutter wheel on the hub to rotate therewith, a flange on the hub, a second gear on the hub mounted for axial movement, a spring urging the gear downward on the hub toward the flange, and means for moving the bracket to bring the gears into mesh, said second gear and the hub being shaped to provide limited relative movement between the gear and the hub.

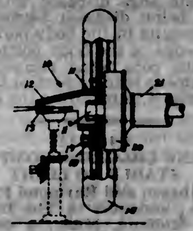
2,462,417
PHASE MODULATION SYSTEM
Lowell E. Norton, Princeton Junction, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 29, 1945, Serial No. 619,690
2 Claims. (Cl. 332—24)

1. A phase modulation system including a carrier source of nominally constant frequency but subject to undesired variations, a pair of electron discharge tubes each having at least an anode, a cathode and two control grids, means for applying the output of said carrier source directly to the first control grid of the first of said tubes, and means applying the output of said carrier source with a delay time which is substantially independent of said variations in frequency of said carrier source to the corresponding control



grid of the other of said tubes, a source of modulation voltage, means for applying said modulation voltage to the second control grids of both of said tubes in push pull, a common load impedance connected to the anodes of both of said tubes in parallel, a voltage limiter connected to said load impedance, and filter means connected to the output circuit of said voltage limiter.

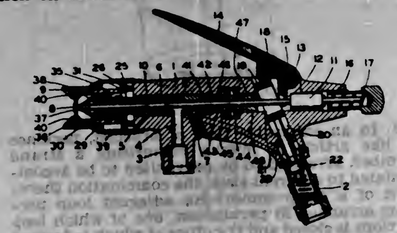
2,462,418
JACK ACCESSORY
Albert H. Peglow, Milwaukee, Wis.
Application December 9, 1944, Serial No. 567,411
2 Claims. (Cl. 254—128)



2. A device of the character described comprising a hollow body open at one end and having an extended tapered portion at the other end, said tapered portion having a flat horizontal face extending inwardly toward the open end of said body, adapted to be engaged by a jack device, said face being positioned above the center of said open end, said hollow body further having an integral right angularly disposed member, said member being provided with an aperture positioned so as to align with the lowermost stud of a vehicle wheel for securement thereto.

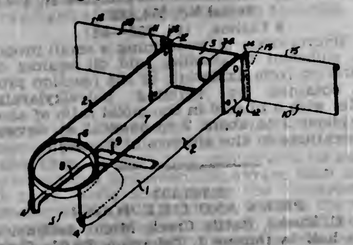
2,462,419
SPRAY GUN
Donald J. Peops, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio
Application January 23, 1943, Serial No. 4,761
2 Claims. (Cl. 299—146.1)

1. In a spray gun of the type described, a spray gun body with a flat annular surface at its forward end, the body having two air passages terminating in the flat annular surface with outlets spaced circumferentially apart but at points radially equidistant from the longitudinal axis of the body, an air dividing ring having a rearwardly extending generally cylindrical collar fitting against the flat annular surface of the body, an outwardly extending offset portion on one side of the collar overlying the outlet opening of one of said passages, an inwardly extending indentation on another side of the collar overlying the



outlet opening of the other air passage, whereby air from the first mentioned air passage is directed within the collar and air from the second mentioned air passage is directed to the outside of the collar, a spray nozzle mounted in front of the air dividing ring, with a central air discharge port and laterally positioned air discharge ports, and means directing air from the center of the ring to the central port and air from the outside of the ring to the laterally positioned ports.

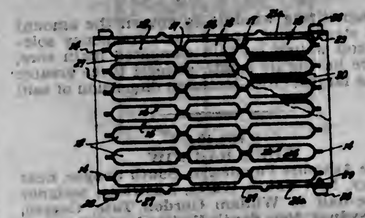
2,462,420
PRACTICE DEVICE FOR GOLF PUTTING
William Pinder, Peterborough, England
Application April 6, 1944, Serial No. 530,759
In Great Britain April 28, 1945
3 Claims. (Cl. 273—35)



1. A device for practicing golf putting, comprising a box-like receptacle having a floor, upstanding rear and side walls and an open top, an opening at the front end, a ring representing the "hole" in the "green" supported by the side walls and positioned adjacent the front opening, said floor being cut away throughout the area beneath said ring.

2,462,421
CROSSFLOW HEAT EXCHANGER
Paul A. Pitt, San Diego, Calif., assignor to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application October 26, 1944, Serial No. 560,249
5 Claims. (Cl. 257—245)

1. In a heat exchanger of the cross-flow type having a first set of generally flat parallel passages extending in one direction for conducting a first fluid that is above ambient temperature and having a second set of generally flat parallel passages interleaved with the first set and extending in a direction substantially at right angles to said one direction for conducting a second, cooler, fluid, the construction comprising: a plurality of generally flat sheets in generally parallel spaced relation with successive pairs of sheets joined directly together along one pair of opposite edges and defining flat conduit units constituting the sole essential structure forming said first set of passages, and the adjacent sheets of each adja-



cent pair of said conduit units being joined directly together along their other pairs of opposite edges for defining all of the interior passages of said second set of passages; auxiliary casing walls parallel and in outwardly spaced relation to the outermost of said sheets for defining therewith the outermost passages of said second set of passages; and baffle means extending across said outermost passages at one end thereof for restricting the velocity of flow of said second cooler fluid through said outermost passages more than through the interior passages of said second set to reduce the temperature differential of said outer sheets relative to the remaining sheets.

2,462,422
PROCESS FOR POLYMERIZING VINYL HALIDES
Louis Plambeck, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 17, 1942, Serial No. 458,787
8 Claims. (Cl. 260—78.5)

1. A process for polymerizing a vinyl halide in an aqueous dispersion which comprises dispersing said halide in an aqueous medium containing from .1% to 10%, based on the amount of monomer present, of a dissolved salt of perdisulfuric acid and sodium bisulfite, in an amount within the range of .001% to 5% of the amount of vinyl halide present, and then maintaining said dispersion at a temperature ranging from 0° C. to 100° C. until polymerization occurs.

2,462,423
FERROMAGNETIC VARIABLE HIGH-FREQUENCY INDUCTOR
Wladimir J. Polydoroff, Glencoe, Ill.
Application September 27, 1944, Serial No. 556,062
In Canada July 15, 1944
8 Claims. (Cl. 171—242)

1. A high frequency variable inductor comprising a high frequency substantially closed magnetic circuit having an elongated main core portion and high frequency ferromagnetic closing sections, a high permeability yoke made of magnetic material of low-coercivity, a magnetizing

winding surrounding said yoke; the ends of said yoke embracing said ferromagnetic core to enable the passage of steady flux through said entire core in one direction while by-passing said

2,462,425
ARTICLE OF JEWELRY AND CLASP THEREFOR
Irwin Pratt, Brooklyn, and Wolf Raynard

angularly bent to provide a terminal prong adapted to be driven into the outer end of the handle and the inner end of the bar adapted

last mentioned frame having openings formed therein for the reception of the post rods, scaffold bracing means between the corner posts and the frames, and means for connecting some of

winding surrounding said yoke; the ends of said yoke embracing said ferromagnetic core to enable the passage of steady flux through said entire core in one direction while by-passing said winding and said yoke for high frequency flux and control means to supply direct current into

said magnetising winding to govern the amount of said steady flux, and a high frequency solenoidal coil wound on said elongated main core, said core having its length at least twice greater than the largest cross-sectional dimension of said core.

2,462,424
WHEELBARROW
Ranville Ashmore Popplewell, South Coogee, near Sydney, New South Wales, Australia, assignor of one-half to William Gordon Tate, Coogee, near Sydney, New South Wales, Australia
Application September 23, 1946, Serial No. 698,851
In Australia October 16, 1945
12 Claims. (Cl. 298—3)

1. A wheelbarrow comprising a frame and a container, said frame comprising two laterally spaced longitudinal members, a handle secured to the rear end of each member, an axle mounted between said members adjacent the front end thereof, a wheel on said axle, a leg secured to each member between said handle and said wheel and axle, means for detachably and pivotally connecting a container to said frame at one end of said container and for detachably connecting said container to said frame at the other end of said container so as to permit limited pivotal movement of said container about said pivotal connection, said connecting means being secured to said frame substantially between said handles and said wheel and axle, an angle iron member secured along each longitudinal edge of the base of said container, an open ended slot in the front end of the vertical leg of said angle iron member and in the rear end of the upper leg of said angle iron member, said pivotal securing means comprising a substantially horizontal pin secured to each frame member between said leg and said wheel and adjacent said wheel, said pin engaging said slot at the front end of said angle iron member, said means for connecting said container to said frame so as to permit limited pivotal movement of said container about said pivotal connection comprising a bolt passing through a hole in each said frame member and said handle adjacent the rear end of said angle iron member and located in said slot at the rear end of said angle iron member with its head uppermost, stop means on the lower end of said bolt to retain said bolt in said hole and an upturned corner of the upper leg of said angle iron member to retain said bolt in said slot.

2,462,425
ARTICLE OF JEWELRY AND CLASP THEREFOR
Irwin Prati, Brooklyn, and Wolf Raynard Wellman, Jackson Heights, N. Y.
Application April 22, 1944, Serial No. 532,196
8 Claims. (Cl. 63—3)

1. In an extensible type of bracelet, necklace or like article of jewelry comprising a strand member, arranged to be convoluted to be accommodated to different sizes, the combination therewith of a clasp comprising adjacent loop portions arranged in parallelism, one of which loop portions is closed and the other of which is formed from the body and has a branch directed over the same with an end extended substantially radially thereof, pivot means on said end hingedly mounting a disengageable locking element, cooperating with the body of the clasp to form the second loop, the locking element in the detached position forming an open sided loop for lateral attachment of the clasp to any portion of the strand member.

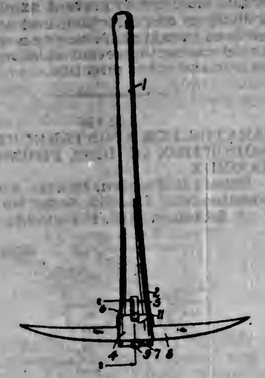
2,462,426
PREPARATION OF POLYALKYLBENZYL PHENOLS
Orland M. Reiff, Woodbury, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 14, 1944, Serial No. 554,163
8 Claims. (Cl. 252—52)

1. Hydrocarbon oil containing a small proportion, sufficient to stabilize said oil against deterioration from oxidation, of the reaction product obtained by reacting polyalkylaralkyl halides with a phenol in the molal ratio of about 1 to about 2 to about 2 to about 1 at elevated temperatures in the absence of a solvent.

2,462,427
PICKS AND LIKE TOOLS
John C. Roche, Battle Creek, Mich., assignor of one-half to Doreme J. Zahanien, Battle Creek, Mich.
Application August 23, 1945, Serial No. 611,960
2 Claims. (Cl. 206—32)

1. In a fastener for tool heads, a handle having an inwardly tapered tool head-engaging end substantially ovate in cross-section providing flattened sides, one of the flattened sides having a relatively wide groove therein with a flat bottom wall, a tool head having an inwardly tapering socket of a shape in cross-section to mate with the tapering end of said handle, the groove being of greater length than the length of the tool head socket, and a fastener for anchoring the tool head on the handle including a bar rectangular in cross-section of substantially the same width of the groove and of a thickness greater than the depth of the groove to provide wedging engagement between the tool head and handle, the outer end of the bar being reversely

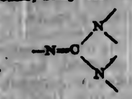
angularly bent to provide a terminal prong adapted to be driven into the outer end of the handle and the inner end of the bar adapted



to be bent away from the handle and into U-shape for overlying the flattened side wall of the tool head.

2,462,428
PROCESS OF DYEING GLASS FIBERS
Hans Reesti, Basel, Switzerland, assignor to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application August 29, 1944, Serial No. 551,774. In Switzerland October 29, 1943
4 Claims. (Cl. 8—8)

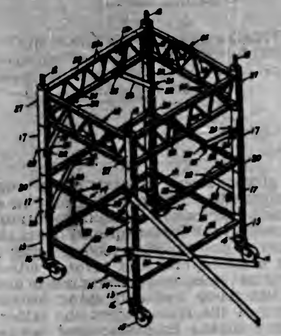
1. A process of dyeing artificial fibrous material made of glass which as such has no affinity for dyestuffs, which comprises treating the said fibrous material with unhardened soluble products produced by the interaction of formaldehyde and a compound which contains not more than six hydrogen atoms, only one atom grouping



is not of cyclic character and which consists of elements the atomic weight of which is not greater than 16 and which contains in its molecule in relation to carbon less oxygen than urea, and then, while maintaining the unhardened character of the said products, treating the material with a water-soluble organic dyestuff which contains at least one sulfonic acid group.

2,462,429
SCAFFOLD
Milton Sachs, New York, N. Y.
Application August 30, 1945, Serial No. 613,481
2 Claims. (Cl. 304—2)

1. A pair of scaffold structures, each structure comprising a plurality of corner posts, said posts each comprising a tubular member open at one end, a rod extending outwardly of said tubular member at the opposite end, a second like number of similar corner posts mounted on said rods, a frame below the first-mentioned corner posts, said frame comprising interconnected hollow corner hubs in alinement with the corner posts, a caster extending through the hubs of said frame into each of the first-mentioned corner posts, a frame above the first-mentioned corner posts, the last mentioned frame having openings formed therein for the reception of the post rods, scaffold bracing means between the corner posts and the frames, and means for connecting some of the corner posts of one structure, to corner posts



of the other structure said means comprising crossed members, vertically disposed tubes at each end of said members for engagement with a pair of post rods of one of the structures and with a pair of posts on the other of said structures.

2,462,430
SULFUR-CONTAINING POLYAMIDES
Allan K. Schneider, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 30, 1943, Serial No. 516,283
6 Claims. (Cl. 260—72)

1. A process for obtaining sulfur-containing polyamides which comprises reacting a polymer selected from the group consisting of N-methylol polycarbonamides and N-alkoxymethyl polycarbonamides with a thiol in the presence of an acid catalyst, the average number of carbon atoms in the segments of the chain separating the amide groups in said polycarbonamides being at least two, and the nitrogen in said amide groups being an integral part of the polymer chain.

2,462,431
ARTICLE SUPPORTING RACK
Max Stefan Schneider, Chicago, Ill.
Application July 24, 1946, Serial No. 686,025
7 Claims. (Cl. 211—113)

2. An article-supporting rack comprising an elongated principal support of rectangular cross section having a plurality of longitudinally spaced-apart inverted L-shaped slots, one leg of the slot being transversely disposed and opening at one edge of said support, and the other leg being disposed longitudinally of said support, and a plurality of transversely extending elongated members each adapted for engagement in a slot, each member including a pair of L-shaped clips secured thereto by one leg, the other leg of each clip being respectively adapted to abut opposed parallel faces of said support.

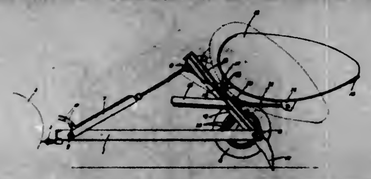
2,462,432
POWER SCOOP
Thornton S. Scribner, Nevada City, Calif.
Application September 8, 1945, Serial No. 615,210
7 Claims. (Cl. 37—4)

ing portion, a shaft rotatably mounted in said bearing portion having a threaded end engaging said threaded recess and a portion bearing against said shoulder to prevent axial movement of said shaft in one direction, and an adjusting member fixed to said shaft having a shoulder en-

ing a plurality of recesses therein, each recess being bounded by an upwardly facing shoulder on said lower section; a ball in each of said recesses projecting from the undersurface of said lower section; a removably mounted bearing race separate from said sections engaging each shoulder;

with said core; and slidable means carried by said supporting structure and movable in one direction for compressing said coil and in the opposite direction for distending the same for varying the tension thereof.

2,462,433
POWER SCOOP
Thornton S. Serfliner, Nevada City, Calif.
Application September 8, 1945, Serial No. 615,210
7 Claims. (Cl. 37—4)



6. A power scoop comprising a supporting frame, means to position such frame in a downwardly and rearwardly inclining position, a carriage mounted for travel up and down said support when so positioned, a scoop having an open end and a closed end and pivoted adjacent its closed end to the carriage, the carriage and closed end of the scoop normally lying adjacent the upper end of the frame when the latter is elevated, and means interconnected between the frame and the scoop at points intermediate the carriage and open end of the scoop and operable to push such open end of the scoop outwardly and upwardly relative to the frame.

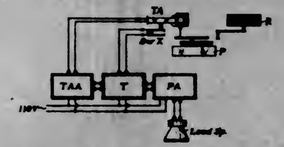
2,462,432
PREPARATION OF ORGANIC THIOCYANATES AND ISOTHIOCYANATES
Norman E. Searle, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 15, 1946, Serial No. 670,027
16 Claims. (Cl. 260—454)

1. A process of preparing organic thiocyanates and isothiocyanates which comprises reacting together an organic halide having a relative reactivity of at least 0.5 in comparison with n-butyl chloride as 1.0 and selected from the class consisting of organic chlorides, bromides and iodides, an alkali metal cyanide, and an excess of sulfur over that stoichiometrically required by said alkali metal cyanide in an oxygenated organic solvent selected from the class consisting of the lower aliphatic alcohols having from 1 to 5 carbon atoms and aliphatic ketones having from 3 to 7 carbon atoms, and isolating therefrom a member of the class consisting of organic thiocyanates and isothiocyanates.

2,462,434
WINDOW LOCKING DEVICE
Bayard P. Sparks, St. James, N. Y.
Application April 26, 1946, Serial No. 665,221
2 Claims. (Cl. 292—155)

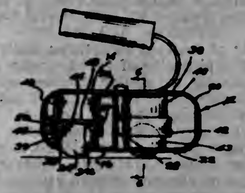
2. A locking device for window sashes comprising a tubular casing having a recess therein and a smaller diameter bearing portion, said recess and bearing portion being in alignment, an abutment shoulder between said recess and said bearing portion, a plunger member slidably and nonrotatably mounted in said recess and having an internally threaded recess coaxial with said bearing portion, a shaft rotatably mounted in said bearing portion having a threaded end engaging said threaded recess and a portion bearing against said shoulder to prevent axial movement of said shaft in one direction, and an adjusting member fixed to said shaft having a shoulder engaging said casing to prevent axial movement of said shaft in the other direction.

2,462,435
APPARATUS FOR UNINTERRUPTED REPRODUCTION OF DISK PHONOGRAPH RECORDS
Robert E. Stanton, Denver, Colo.
Application May 15, 1945, Serial No. 593,817
5 Claims. (Cl. 179—100.4)



1. A mechanism for playing records in sequence, comprising; means for rotating a record at a predetermined constant speed, an electric pickup operatively associated with a record adapted to be carried by the record rotating means, a sound recording device operatively connected with the electric pickup, means translating the sound recordings into an electric current having amplitude and frequency characteristics corresponding to the recorded sound, an electrodynamic loud speaker, means transmitting current from the translating means to the loud speaker including an electronic amplifier, said sound recording device including recording means, an element upon which the recording means records the sound, the recording means and translating means being relatively movable with respect to said element, the rate of relative movement of the recording means being greater than that of the translating means whereby a predetermined rate of decrease in the tempo of the sound emitted by the loud speaker relative to that of the record is effected, to obtain a time lag, and the loud speaker as a result of said decrease in tempo will continue functioning a sufficient time after the electric pickup and recording means become inoperative, to provide sufficient time to change to another record of the sequence.

2,462,436
CURLING STONE
Robert G. Stewart, Los Angeles, Calif., assignor to Curlette, Inc., Los Angeles, Calif., a corporation of California
Application June 17, 1946, Serial No. 677,241
2 Claims. (Cl. 273—128)

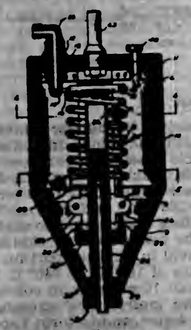


1. In a curling stone: a body comprising upper and lower mating sections; the lower section having a plurality of recesses therein, each recess being bounded by an upwardly facing shoulder on said lower section; a ball in each of said recesses projecting from the undersurface of said lower section; a removably mounted bearing race separate from said sections engaging each shoulder; bearing balls within said race and engageable with said race and ball; and means on said upper body section engaging the upper ends of said races for clamping and holding them downwardly against said shoulders.

2,462,437
ARTIFICIAL FISH BAIT
Olaf Tallaksen, Chicago, Ill.
Application March 3, 1947, Serial No. 732,050
5 Claims. (Cl. 43—39)

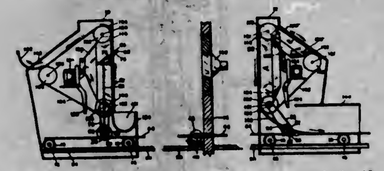
1. In a fishing lure, a body member having an eye intermediate the ends thereof, and a slot adjacent an end thereof, a hook extending through the slot and provided with an eye at one end of its shank secured to the first eye, and a guard of resilient material having an eye at one end freely pivoted on the eye of the body and a conical formation at its opposite end adapted to be maintained in a guard relation with the pointed end of the hook, whereby when a fish bites on the hook and pushes the guard out of its engaged relation with the point, the guard will become deformed from its original shape and will move to a position on the body where the cone shape portion thereof will contact an edge portion of the body of the lure, said conical formation having an inner wall surface thereof in only single point gravity urged supporting contact on the hook.

2,462,438
TAP EXTRACTOR
Donald Thomas, Detroit, Mich., assignor to Clinton Machine Company, Clinton, Mich., a corporation of Michigan
Application June 13, 1945, Serial No. 599,213
7 Claims. (Cl. 172—126)



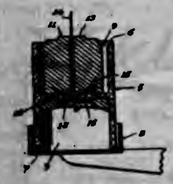
2. In a solenoid, an electric winding of resilient material wound to provide a coil spring; a supporting structure connected to said winding adjacent one end; a core slidably mounted in said winding and movable in one direction upon the energizing of said coil, the opposite end of said coil being connected to and movable in unison with said core; and slidable means carried by said supporting structure and movable in one direction for compressing said coil and in the opposite direction for distending the same for varying the tension thereof.

2,462,439
CONTINUOUS PROCESS CAMERA
Lawrence Thompson, Richmond Hill, N. Y.
Application March 28, 1946, Serial No. 657,664
1 Claim. (Cl. 271—45)



In an apparatus of the character set forth, a pair of continuous chains, sprockets over which the chains are trained, spaced bars carried by the chains and extended between the chains, plates pivotally secured to the bars and positioned to close the areas between the bars in certain sections of the path of travel of the chains and adapted to drop downwardly to open said areas between the bars in other sections of travel of the chains, an endless curtain of porous material supported and conveyed by said spaced bars, said chains, bars and curtain traveling in a substantially triangular shaped endless path with part of said path vertically positioned, a pan having an open side facing and adjacent to the inner side of the vertical portion of the curtain, another pan adjacent to the inner side of an upper sloping portion of the curtain, said plates pivoted to open in the areas which are adjacent to the pans, and suction means within the pans to cause air to travel inwardly through said vertical and sloping portions of the curtain and between the plates so as to hold an article against the outer side of the curtain in said areas.

2,462,440
CANDLE HOLDER
Thomas W. Tierney, Watertown, Mass.
Application October 22, 1947, Serial No. 781,346
4 Claims. (Cl. 67—21)



1. A candle holder comprising a body including a pair of opposite ends, either of which constitutes a support for the holder, said body having a recess in each end so that whichever end serves as a support, the recess in the other end is disposed upwardly, and a partition member in said body separating said recesses with its upper surface available to support a candle in the upwardly opening recess, said partition being of thermally conductive stock so that the heat of a burning candle is available to soften any residue of a burnt-out candle adhering to the lower surface of said partition so that such residue drops therefrom.

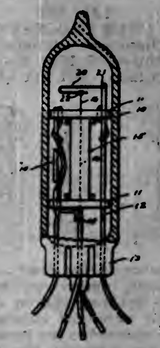
2,462,441
VACUUM TUBE WITH FILAMENTARY CATHODE
John A. Victoreen, Cleveland, Ohio
Application February 13, 1947, Serial No. 728,169
3 Claims. (Cl. 250—27.5)

2,462,442
TRANSMISSION LINE SYSTEM
Robert S. Wehner, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 7, 1946, Serial No. 639,606
4 Claims. (Cl. 343—17)

to the introduction of fresh maleic acid, distilling said last mentioned portion of the solution to vaporize solvent and leave maleic anhydride as residue, condensing the solvent vapors, and returning the condensate to the cycle.

squeegee having wiping contact with the screen as said printing means is swung to an inclined printing position, said squeegee having a pivotally hung wiping element adapted to swing to an inclined wiping position, a pendulously hung weight adapted to swing away from said wiping element and hang in a vertical position by force

2,462,441
VACUUM TUBE WITH FILAMENTARY CATHODE
John A. Victoreen, Cleveland, Ohio
Application February 15, 1947, Serial No. 728,169
3 Claims. (Cl. 250—27.5)

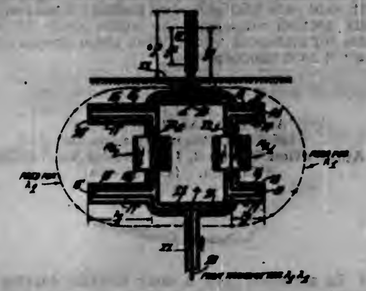


1. A miniature tube for control purposes including an evacuated envelope, electrodes disposed in the envelope and including at least an anode and an electron emitting cathode, said cathode being capable of stable operation with changes in heating potential and comprising a single short wire of under three-quarters of an inch in length and between .0008 and .0004 inch in diameter, means to support said filament comprising a lead in wire extending through a press in said envelope and a support extending spaced from the filament, spring means on the end of the support connected to said other end of the filament to hold it taut, said filament being formed of an alloy of nickel, chromium and cobalt in such proportions as to provide a high specific resistance and low temperature resistance coefficient and low thermal conductivity.

2,462,442
BRANCH HOLDER
Raymond C. Wallace, East Providence, R. I.
Application June 28, 1946, Serial No. 680,009
2 Claims. (Cl. 248—42)

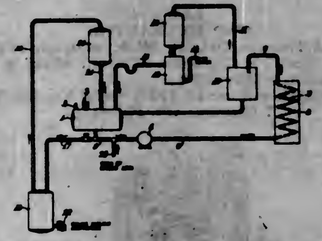
1. A branch holder for a tree comprising a bracket formed of angularly arranged arms each having a recess with flaring walls to receive a circular object therein and means to secure one of said arms of the bracket to a tree trunk and means to secure a branch to the other arm of the bracket, said first and second securing means each comprising a strap to embrace a portion of the tree, said strap passing through a slot in its arm.

2,462,443
TRANSMISSION LINE SYSTEM
Robert S. Wolmer, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 7, 1946, Serial No. 639,606
4 Claims. (Cl. 250—17)



3. An antenna feed line system for operation at two frequencies including a branched reentrant transmission line from a source of energy at said frequencies to a single antenna, each branch of said transmission line including means presenting a high impedance to a different one of said frequencies, each branch also including a series matching section, each of said matching sections serving to match the impedances in each branch for the frequency which it is to pass.

2,462,444
PRODUCTION OF MALEIC ANHYDRIDE FROM MALEIC ACID
John M. Weiss, New York, N. Y.
Application July 29, 1943, Serial No. 41,295
4 Claims. (Cl. 260—342.6)

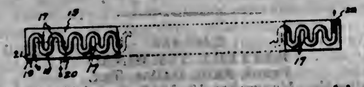


1. The process of producing maleic anhydride from maleic acid and which includes circulating in a closed cycle a solution composed essentially of a solvent comprising an aromatic hydrocarbon liquid having a boiling point between about 130° C. and about 160° C., and 20% to 70% maleic anhydride, adding maleic acid to said solution at one point in the cycle, heating said solution and added maleic acid in another portion of the cycle to a temperature of 160° C. to 240° C. for a period of not more than 15 minutes to convert substantially all of the maleic acid present to maleic anhydride and water, and to form vapors of water and a portion of the solvent, discharging said vapors from the cycle, condensing said vapors, separating water from the condensed solvent and discharging the water from the system, returning said solvent to the cycle, withdrawing a portion of said solution from the cycle at a point beyond the point of vapor discharge and prior to the introduction of fresh maleic acid, distilling said last mentioned portion of the solution to vaporize solvent and leave maleic anhydride as residue, condensing the solvent vapors, and returning the condensate to the cycle.

2,462,445
AIRTIGHT LID FOR CONTAINERS
Hugo Weiss, London, England
Application September 21, 1945, Serial No. 618,430
In Great Britain September 26, 1944
10 Claims. (Cl. 215—54)

1. A closure for the mouth of a container, said closure comprising a flexible sealing ring, pressure means providing inner and outer pressure members between which said flexible sealing ring is located, tightening means including a post upstanding from the inner pressure member and relatively adjustable in opposite directions to compress said pressure members upon said sealing ring to expand the same radially or alternatively to relax the pressure on the sealing ring, said upstanding post being provided with a vent passage therethrough, and sealing means movable by said tightening means positively to seal or to unseal said vent passage upon adjustment of said tightening means to compress or to relax the pressure, respectively, on said sealing ring.

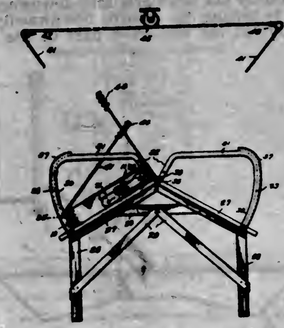
2,462,446
BUILT-IN CIRCUITOUS SMOKE PASSAGE
Starnes R. Wellborn, Nashville, Tenn.
Application January 19, 1945, Serial No. 573,553
1 Claim. (Cl. 131—11)



An article of the class described comprising a strip of material having a plurality of parallel transverse passageways extending in a direction from one side edge of the strip toward the opposite side edge and terminating short of said side edges, the ends of the passageways having alternate connections near said side edges to provide a serpentine, continuous, smoke conveying channel of greater length than the length of the strip, said smoke conveying channel having a smoke inlet at one end and at one side of the strip and having a smoke exit at the opposite end and upon the opposite side, said strip being adapted to assume the form of a roll constituting a cylindrical body, the parallel passageways of said smoke conveying channel thereof extending in a direction substantially perpendicular to the base of the formed cylindrical body.

2,462,447
SILK-SCREEN PRINTING APPARATUS
Starnes Robert Wellborn, Nashville, Tenn.
Application May 17, 1946, Serial No. 670,468
10 Claims. (Cl. 101—123)

4. A machine of the class described comprising an inclined bed plate, a printing means mounted to swing into and out of an inclined printing position relative to said bed plate, a screen carried by the printing means, a gravity propelled squeegee having wiping contact with the screen as said printing means is swung to an inclined printing position, said squeegee having a pivotally hung wiping element adapted to swing to an inclined wiping position, a pendulously hung weight adapted to swing away from said wiping element and hang in a vertical position by force of gravity as said squeegee moves longitudinally of said printing means, means at one end of said trackway for guiding said squeegee to a position out of contact with said screen, and means communicating with the last mentioned means for guiding the squeegee to a screen contacting position when said printing means is swung from an inclined printing position.



2,462,448
METHOD FOR THE CATALYTIC PRODUCTION OF OXO-CARBONYL COMPOUNDS
Gerald M. Whitman, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 5, 1946, Serial No. 695,939
13 Claims. (Cl. 260—599)

1. A process for the preparation of an oxo-carbonyl compound which comprises reacting an olefinic unsaturated compound under superatmospheric pressure and at a temperature of at least 100° C. with a mixture of carbon monoxide and hydrogen in the presence of a metal from group II of the periodic table of elements having an atomic number from 12 to 30.

2,462,449
PREPARATION OF GROWTH PROMOTING SUBSTANCES
Roger J. Williams, Corvallis, Oreg., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application April 3, 1939, Serial No. 265,799
5 Claims. (Cl. 260—534)

2. The method of synthesizing pantothenic acid which comprises directly combining a lower alkyl ester of β-alanine with α-hydroxy-β,β-dimethyl-γ-butyro lactone.

2,462,450
SCOOP AND SIPHON FOR WATER-COOLING SYSTEMS
John Harrison Wilson, Bay Shore, N. Y.
Application July 12, 1945, Serial No. 604,701
6 Claims. (Cl. 115—0.5)

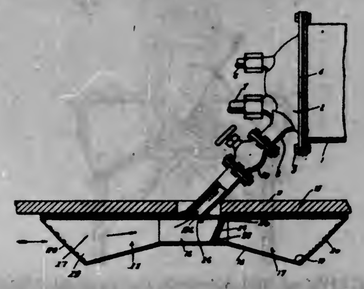
1. The combination of a boat having a hull and a scoop for conducting water and syphoning water into and out of the hull of the boat, comprising a hollow, elongated scoop body to be attached to the hull of the boat and having a fluid connection interiorly of the boat, said scoop body having a restricted central portion, outwardly and oppositely flaring end portions leading from the central portion to opposed mouths, the walls of

2,462,451
VARIABLE GAIN AMPLIFIER
Lester R. Yates, Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 12, 1945, Serial No. 582,225
4 Claims. (Cl. 179—171)

2,462,454
TRAIN CARRIED CAB SIGNAL APPARATUS
Leslie R. Allison, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale Pa., a corporation of Pennsylvania
Application April 9, 1947, Serial No. 740,311
4 Claims. (Cl. 246—63)

stantially equal to the diameter of said external annular portion at which the driving relationship

water into and out of the hull of the boat, comprising a hollow, elongated scoop body to be attached to the hull of the boat and having a fluid connection interiorly of the boat, said scoop body having a restricted central portion, outwardly and oppositely flaring and portions leading from the central portion to opposed mouths, the walls of the scoop body cut angularly and downwardly at the ends to incline the mouths downwardly, and a flap valve in the restricted part of the scoop

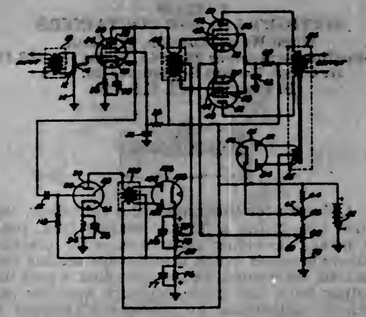


to one side of the connection into the boat positioned to be moved to closed position by movement of water in one direction when the scoop is used to introduce water into the boat, and to be moved to an open position by movement of water in the opposite direction through the scoop to provide an unrestricted passage for water through the scoop past the connection into the boat to provide a syphoning effect to withdraw water from the boat.

2,462,451
DYNAMOELECTRIC MACHINE
Martin P. Winther, Waukegan, Ill., assignor to Martin P. Winther, as trustee
Application August 12, 1946, Serial No. 689,878
6 Claims. (Cl. 172—126)

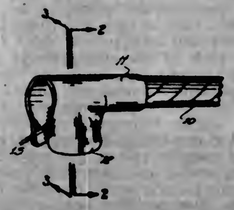
5. A dynamoelectric machine comprising a stator having endwise bearings, a rotor having endwise trunnions in said bearings, said stator and rotor forming a magnetic gap therebetween, spaced conical surfaces on the stator and the rotor adjacent said bearings forming a centrifugal liquid-pumping gap between the stator and the rotor, a liquid circulating system, said stator having liquid inlet and outlet passages connected with said circulating system for circulation of liquid through the magnetic gap, said bearings having liquid inlets and outlets also connected with said circulating system and also having outlets connected with the space between the conical surfaces, whereby at least some of the liquid is centrifugally pumped by the rotor from the bearings to join the liquid circulating through the magnetic gap.

2,462,452
VARIABLE GAIN AMPLIFIER
Lester R. Yates, Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 12, 1945, Serial No. 582,225
4 Claims. (Cl. 179—171)



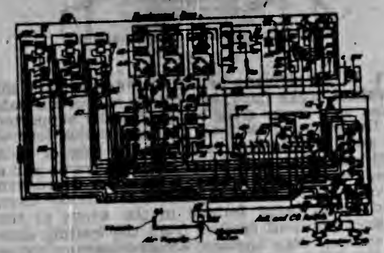
2. In a signal amplifying channel a variable gain electric discharge device, a first rectifying circuit, means amplifying energy from a portion of said channel preceding said device and applying it to said rectifying circuit, said rectifying circuit being connected to said device in a manner such that flow of current therethrough increases the gain of said device, a second rectifying circuit responsive to the output energy of said device, means applying a biasing potential to said second rectifying circuit, and a circuit coupling said second rectifying circuit to said amplifying means and to said device in a manner such that flow of current through said second rectifying circuit decreases the gain of both said amplifying means and said device.

2,462,453
BATTERY TERMINAL
Frank Akin, Dallas, Tex.
Application November 19, 1945, Serial No. 629,449
1 Claim. (Cl. 173—259)



In a battery cable clamp, the combination comprising a sheet of spring metal shaped to form complementary and oppositely arcuated wing portions and define laterally contractible jaws adapted to clampingly receive the post of a battery, said clamp relying upon its own inherent resiliency to retain itself on said post; the confronting concave faces of said jaws being serrated to bite into said battery post to prevent upward movement of the clamp thereon, while readily permitting downward movement thereon, and a ferrule formed integral with and disposed at right angles to the longitudinal axis of said jaws and longitudinally split to receive an end of a battery cable.

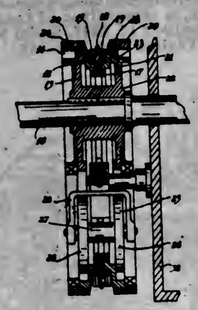
2,462,454
TRAIN CARRIED CAB SIGNAL APPARATUS
Leslie R. Allison, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale Pa., a corporation of Pennsylvania
Application April 9, 1947, Serial No. 740,311
4 Claims. (Cl. 246—63)



1. In train carried cab signal apparatus for use with track circuit current coded at a first, a second and a third code rate for operating a train carried code following relay at a code rate corresponding to the code rate of the track circuit current, a decoding transformer connected to said code following relay to create an alternating voltage of a frequency corresponding to the code rate at which the relay is operated; a first, a second and a third decoding unit connected in multiple to said transformer; each said decoding unit including capacitance and inductance to tune the first, second and third units to resonance at the frequency of said alternating voltages for the first, second and third code rates, respectively; a first, a second and a third decoding relay connected to said first, second and third decoding unit, respectively, to effectively energize the first, second and third decoding relays in response to the first, second and third code rate, respectively; an alternative circuit including a current source and a front contact of said first decoding relay connected to the second decoding relay to energize the second decoding relay, and another alternative circuit including a current source, a back contact of said first decoding relay and a front contact of said second decoding relay connected to said third decoding relay to energize the third decoding relay.

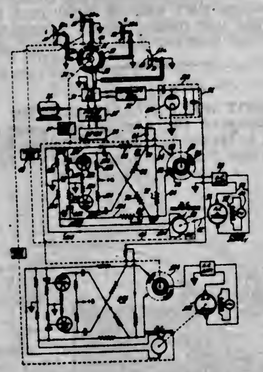
2,462,455
ANNULAR FLOATING TOOTHED GEARING
Benson George Willis Bartlett, Darlington, England, assignor of one-half to Northern Patent Developments, Limited, Darlington, England, a company of Great Britain and Northern Ireland
Application August 9, 1945, Serial No. 609,757
In Great Britain August 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires August 12, 1963
7 Claims. (Cl. 74—413)

1. Gearing comprising a pinion, a drive-transmission member, and a floating ring for transmitting driving movement between said pinion and member, the said floating ring having an internal toothed gear in driving-coacting relationship with said pinion and an external annular portion in driving-coacting relationship with said drive-transmission member, and the pitch diameter of said internal toothed gear being substantially equal to the diameter of said external annular portion at which the driving relationship



is effective between the latter and said drive-transmission member.

2,462,456
ANTIHUNT SERVOMOTOR CONTROL SYSTEM
Alda V. Bedford, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 14, 1945, Serial No. 588,276
7 Claims. (Cl. 318—18)



1. A servo motor system for following a pilot, comprising a load, a motor for driving said load, means associated with said load for generating a first A.-C. signal having alternate lobes, the relative amplitude of said lobes being a measure of the displacement of the load from said pilot, means responsive to operation of said motor under control of said signal for generating a first D.-C. signal proportional to a function of said displacement, commutating means synchronous with the alternation of said lobes for alternately reversing the polarity of said first D.-C. signal whereby to produce a second A.-C. signal, means for combining said first A.-C. signal and said second A.-C. signal, means for driving said motor under control of said combined A.-C. signal.

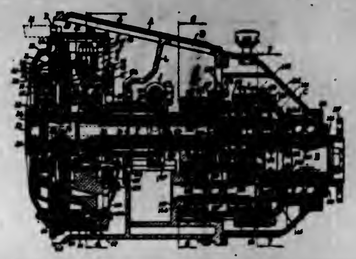
2,462,457
MULTIPLE-CLUTCH MECHANISM
John O. Berndtson, Short Beach, Conn., assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn., a corporation of Connecticut
Application January 15, 1944, Serial No. 518,326
23 Claims. (Cl. 192—48)

2,462,459
AIR RESISTANT BRAKE FLAP
Charles A. Bigelow, Houston, Tex.
Application November 19, 1945, Serial No. 627,835
2 Claims. (Cl. 244—113)

of the bottle, said ledge embodying an endless screw-threaded depending neck, and a jar clos-

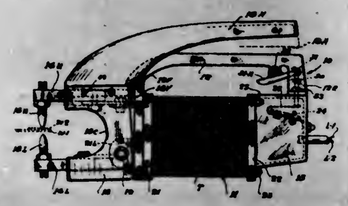
2,462,464
IRONING CORD RETRACTOR
Ernest J. Brier, Los Angeles, and Walter G. McCue, Downey, Calif.
Application March 23, 1946, Serial No. 656,657
1 Claim. (Cl. 248—51)

2,462,457
MULTIPLE-CLUTCH MECHANISM
John O. Bernstson, Short Beach, Conn., assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn., a corporation of Connecticut
Application January 15, 1944, Serial No. 518,326
23 Claims. (Cl. 192—48)



1. In a transmission mechanism, the combination of concentric shafts each carrying rigid therewith a friction member, a driving member, friction clutch parts movable axially within said driving member and movable axially relatively to each other and adapted to clamp between them either of said friction members, resilient means normally holding said clutch parts in a predetermined relative axial position, and resilient means normally holding said clutch parts and said driving member in a predetermined relative axial position, said clutch parts comprising an outer enclosing part and an inner part enclosed thereby, said last named means connecting said engine-driven member with said outer part.

2,462,458
SPOT WELDING APPARATUS
Marshall Beymer, Chicago, Ill., assignor of one-half to Henry L. Sweitz, Chicago, Ill.
Application July 14, 1948, Serial No. 38,620
4 Claims. (Cl. 219—4)

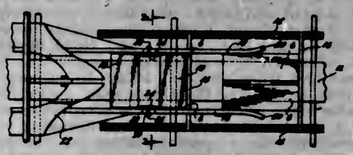


1. In a portable spot welding apparatus, an elongated body including a transformer, a lifting handle extending along the top of said body for lifting the same, an upper electrode extended in a fixed relation from one end of said body, a lower electrode movably mounted on said body below and in operative alignment with said upper electrode, energizing connections from said transformer to said electrodes, and an electrode clamping handle movably mounted on said body and disposed above said lifting handle, said lower electrode being mounted on said clamping handle for movement thereby.

2,462,459
AIR RESISTANT BRAKE FLAP
Charles A. Bigelow, Houston, Tex.
Application November 10, 1945, Serial No. 627,825
2 Claims. (Cl. 244—113)

1. In an airplane of the monoplane class, air resistant brake flaps; lever arms supporting said flaps, said brake flaps being pivotally supported in the wings of said air craft; a radius formed in each of said lever arms at the base of each said brake flap, said wings having a frame and a skin covering said frame; a recess or depression formed in the wings to receive said brake flaps, said recess being formed in the wings at the highest point of camber from the leading edge of the top wing surface, a corresponding recess in the bottom wing surface located in vertical alinement with the top surface recess, all said recesses being equal distance and in parallel alignment from the leading edge; said recesses located and formed to have a radius in the forward side of recess equal to the formed radius of said lever-arm.

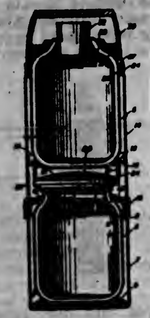
2,462,460
CARTON CLOSING MACHINE
Joseph W. Binsack, New Dorp, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a corporation of New York
Application December 8, 1945, Serial No. 633,799
5 Claims. (Cl. 93—2)



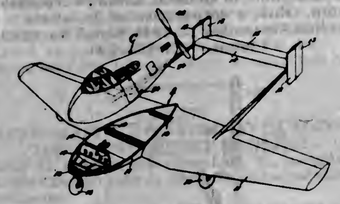
1. In a machine for use in closing cartons having side flaps hingedly connected to the side walls thereof, the combination of means for feeding cartons longitudinally with the side flaps thereof in partially raised position, and means acting automatically as the cartons are thus being fed to bend the side walls inwardly adjacent the hinged connections with the side flaps to cause the side flaps to be swung upwardly to a predetermined position.

2,462,461
VACUUM JAR AND BOTTLE COMBINED
Miles F. Bird, Cushing, Wis.
Application November 18, 1947, Serial No. 786,761
4 Claims. (Cl. 215—13)

1. As a new article of manufacture and as a component part of an assemblage of the class described, a Thermos bottle, a casing externally jacketing the bottle, said casing embodying a cylinder which is open at its bottom, said open bottom portion being screw-threaded, said open bottom portion projecting well beyond the bottom of the bottle, an annular ledge provided with a packing ring, said ledge being secured on the interior of said cylinder and providing a partitioning and supporting member for the bottom of the bottle, said ledge embodying an endless screw-threaded depending neck, and a jar closing cover, said cover having a screw-threaded portion detachably threaded on said neck.



2,462,462
CONVERTIBLE AIR AND LAND CONVEYANCE
Herbert D. Boggs and Helen J. Boggs, Omaha, Nebr.
Application April 7, 1944, Serial No. 529,998
8 Claims. (Cl. 244—2)



3. A conveyance means of the character stated, comprising a winged structure forming an incomplete flying unit, a wheeled structure forming an incomplete land vehicle unit, a body unit adapted to be mounted on either of the first units to complete the same, a power plant carried by the body unit, and plural means for selective connection with the power plant for driving the completed units.

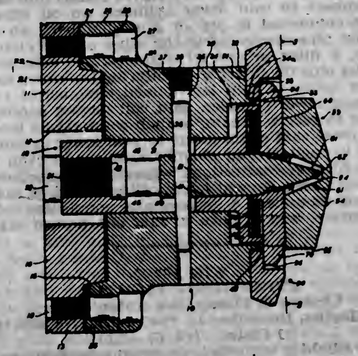
2,462,463
ELECTRIC ARC CUTTING ELECTRODE
Robert Henry Farmer Best, London, England, assignor to Under Water Welders & Repairers Limited, London, England, a British company
Application May 1, 1945, Serial No. 591,287
In Great Britain March 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 3, 1964
2 Claims. (Cl. 219—8)

1. An electrode for underwater arc cutting comprising a refractory main body of carbon, a metal casing surrounding the carbon and an insulating covering over the metal casing, the carbon and casing being formed to provide a passage for oxygen from end to end of the electrode within the casing.

2,462,464
IRONING CORD RETRACTOR
Ernest J. Brier, Los Angeles, and Walter G. McCue, Downey, Calif.
Application March 23, 1946, Serial No. 656,657
1 Claim. (Cl. 248—51)

An ironing cord retractor comprising a bracket attachable to an ironing board, said bracket having an upstanding side in the top of which there is a notch, a resilient flexible support for an ironing cord, said support having an angular base the side of which has a limited slidable connection with said upstanding side on the bracket, and the top of which is receivable in said notch to releasably lock the support in upstanding position, said upstanding side having a second notch on its side edge disposed at more than 90° from the first mentioned notch and in which the top of the angular base is also receivable whereby the support may also be locked in a position wherein it is flexed and pressed against the top of the ironing board.

2,462,465
CHUCK FOR LATHES AND THE LIKE MACHINE TOOLS
Secondo L. Casella, New York, N. Y., assignor to Morey Machinery Co. Inc., Astoria, Long Island, N. Y., a corporation
Application September 12, 1947, Serial No. 773,660
7 Claims. (Cl. 279—2)



1. A chuck comprising a spindle nose adapted to be attached to a lathe spindle, a sleeve mounted therein for rotation therewith and sliding movement relative thereto, a cam pin disposed within the sleeve, means to attach the cam pin to the spindle nose for rotation therewith and to prevent axial movement of the cam pin relative to the spindle nose, said cam pin being formed with cam surfaces at one end, and chucking elements mounted for radial sliding movement relative to said sleeve, and for axial movement together with said sleeve, and having cam surfaces engaging the

cam surfaces on the cam pin so that sliding movement of the sleeve relative to the cam pin will cause radial movement of the chucking elements and movement of said chucking elements longitudinally of the axis of said spindle nose.

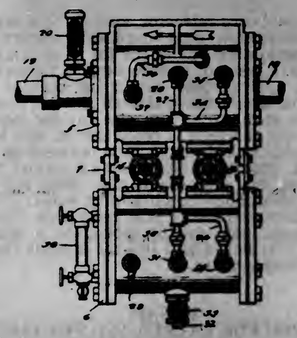
solely operating in said first mentioned bore, and having a reduced closely coiled section of reduced diameter to operate in said bores to push a flint through said flint chamber in contact with the sparking wheel, said reduced-diameter

2,462,469
ADJUSTABLE BINDER HITCH
Clayton L. Conrow, Arroyo Grande, Calif.
Application December 5, 1945, Serial No. 633,014
1 Claim. (Cl. 280—179)

2,462,471
RADIATION DETECTOR
Kenneth Carl Crumrine, Bellaire, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application November 24, 1943, Serial No. 511,516

cam surfaces on the cam pin so that sliding movement of the sleeve relative to the cam pin will cause radial movement of the chucking elements and movement of said chucking elements longitudinally of the axis of said spindle nose.

2,462,466
CRUDE OIL PURIFIER
Gonzalo Meneses Castellanos, Placetas, Cuba, assignor to Meneses y Compania, Placetas, Las Villas, Cuba
Application June 26, 1945, Serial No. 601,664
In Cuba May 4, 1944
7 Claims. (Cl. 216—156.6)



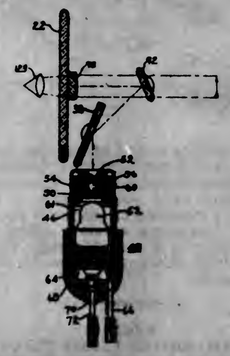
3. An oil purifier, comprising upper and lower horizontally-disposed cylinders, a substantially vertical partition in said upper cylinder separating the same into a pair of chambers, separate means including separate valves connecting said chambers to said lower cylinder, an oil intake pipe connected to one of said chambers, an oil outlet pipe connected to the other of said chambers, a filter in operative association with said outlet pipe for filtering oil entering the same, said filter being in said last-named chamber, a coil in said lower cylinder, said coil having connections to receive steam, branch connections leading from said connections to said lower cylinder and to each of said chambers, valves in each of said branch connections whereby to selectively supply steam to said lower cylinder and to each of said chambers, a by-pass pipe connecting said chambers, and a valve in said last-named pipe.

2,462,467
PYROPHORIC LIGHTER
Charles C. Clamp, San Antonio, Tex.
Application December 18, 1945, Serial No. 635,734
1 Claim. (Cl. 67—7.1)

In a lighter wherein is provided a sparking unit comprising a tapered body having a longitudinally extending transverse slot at one end, a sparking wheel rotatably mounted in said slot, said body having a bore of one diameter entering from the end of the body remote from the slotted end and having a bore of a reduced diameter between the first bore and said slot, the first bore comprising a spring chamber and the second mentioned bore comprising a flint chamber the axis of which coincides with a radius of said wheel, the improvement which comprises a coil spring having an open wound springy section solely operating in said first mentioned bore, and having a reduced closely coiled section of reduced diameter to operate in said bores to push a flint through said flint chamber in contact with the sparking wheel, said reduced-diameter portion being of a length sufficient to push the

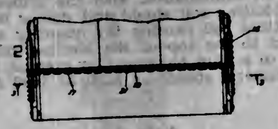
flint entirely out of said flint chamber as the flint wears down and said body having means to stop the flint pushing movement of the spring before the end of the reduced-diameter section can contact the sparking wheel and after the flint shall have been substantially consumed.

2,462,468
SPECTACLE SIGHTING DEVICE
Kendall Clark and Kenneth O. Sisson, Oakwood, Ohio, assignors to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application September 13, 1945, Serial No. 616,134
2 Claims. (Cl. 88—2.4)



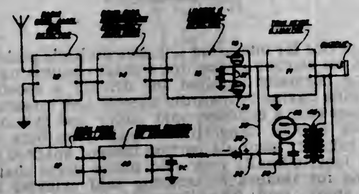
1. A sighting device for sighting at various measurable angles relative to the vertical including spectacles adapted to rest upon the nose, one of the eyepieces of the spectacles being provided with a small segmental collimating lens positioned so that the vision is split and the lens is in the path of a substantial portion of the directly forward vision field of one eye but leaves a substantial portion of the directly forward vision field free of the lens, the spectacles having a forwardly extending bracket, mirror means mounted upon said bracket and having a portion located directly in front of said collimating lens, a level indicating means pivotally mounted upon said bracket, means connecting the bracket and the level indicating means with the mirror means to move the mirror means to reflect light from the level indicating means to the collimating lens.

2,462,469
ADJUSTABLE BINDER HITCH
Clayton L. Conver, Arroyo Grande, Calif.
Application December 5, 1945, Serial No. 632,014
1 Claim. (Cl. 280—179)



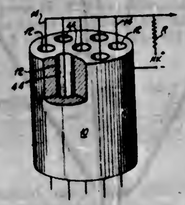
In a merchandise binder hitch for trucks and the like having side boards including vertical and horizontal elements vertically disposed on the sides of the truck body, the combination, which comprises, a pair of parallel horizontally disposed bars with spaced projections thereon and having mounting flanges at the ends each bar being positioned on opposite sides of the truck body, means mounting said bars through the ends thereof on the vertical members of said side boards, said bars being spaced from the horizontal members and also spaced above the lower ends of the vertical elements of said side boards, a chain having a ring on the upper end mounted on the bar on one side of the truck body with the bar positioned through the ring, and another chain with a ring on the upper end and a fastener on the lower end mounted on the bar on the other side of the truck body with the bar positioned through the ring on the upper end thereof, said chains adapted to be adjusted to selected positions on the bars and fastened together to hold cargo on the truck body.

2,462,470
TELEGRAPHY RECEIVER WITH AUTOMATIC FREQUENCY CONTROL
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 17, 1943, Serial No. 491,106
18 Claims. (Cl. 250—40)



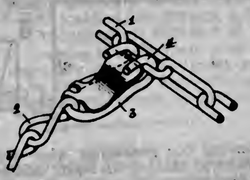
1. In apparatus for deriving a potential which changes when the mean frequency of wave energy changes, which wave energy is modulated from a first frequency through said mean frequency to a second frequency by signals, means excited by said wave energy for deriving an output which is correspondingly shifted between two values which change with reference to a base value when said mean frequency changes, additional means for deriving a second output which is shifted between two values which are fixed with respect to a base value regardless of changes in said mean frequency, and means for combining said derived outputs in opposed relation to derive a resultant combined output which is representative of the direction and extent of changes in the mean frequency of said wave energy.

2,462,471
RADIATION DETECTOR
Kenneth Carl Cramaine, Bellaire, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application November 24, 1943, Serial No. 511,516
9 Claims. (Cl. 250—27.5)



9. A device for detecting neutron radiation comprising a closed housing, a block of lead in said housing, said block being provided with a plurality of holes extending longitudinally therethrough, a wire disposed along the axis of each of said holes, said wires forming the anode and said block forming the cathode of the device, and a substance interposed between the body of said cathode block and the anode wires, which substance is capable of emitting alpha rays when bombarded by neutrons.

2,462,472
TIRE CHAIN LATCH
Leopold Cuillerrier, Verdun, Quebec, Canada
Application March 29, 1946, Serial No. 658,086
2 Claims. (Cl. 152—241)



2. In a tire chain assembly, a side chain of links and a cross chain of links, the end link of said cross chain being U-shaped and having its ends hooked for engagement in one of the side chain links, a bent plate of spring metal mounted on the body of said U-shaped link and engaging beneath the hooks thereof, a hook formed on said plate and encircling said body closely adjacent to the arch of said body, said plate having a notch disposed directly opposite the center of said arch, said plate engaging said body in overlying and unattached relation at the side of said notch opposite the last named hook.

2,462,473
CIRCULAR KNITTING NEEDLE
Virginia M. Delaney, Norco, Calif.
Application September 19, 1947, Serial No. 774,951
1 Claim. (Cl. 66—117)

A circular knitting needle comprising a pair of shanks each having a tapered point at one end and an angulated portion having a tapered extremity at the other end, a flexible rod-like chain

secured to said tapered extremities, the end links of said chain having longitudinal screw threaded

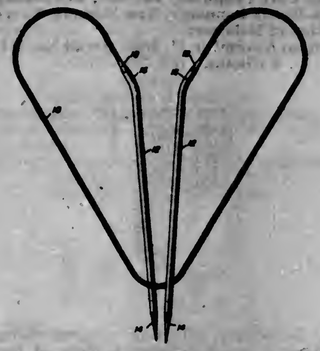
tact with each of said rolls at the top thereof, means to impart to said blotting roll a peripheral speed exceeding the longitudinal rate of travel of the wire, the close spacing between the blotting roll surface and adjacent concentric shield surface in combination with the orifice means

said housing having locking and unlocking positions, a clutch nipple mounted within said sleeve, rollable elements carried by openings in said sleeve and a row of circumferentially arranged cam wedge faces carried by said nipple adapted

longer than the over-all length of said pinions whereby upon interchange of said pinion blocks the pinions may be selectively shifted to mesh with unworn portions of said gears.

2,462,479
RAT OR MOUSE TRAP

secured to said tapered extremities, the end links of said chain having longitudinal screw threaded



extensions, axial bores in said tapered extremities receiving said screw threaded extension.

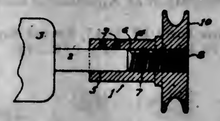
2,462,474
COATING APPARATUS FOR WIRES, FILAMENTS, AND THE LIKE
James K. Delane, Rye, N. Y.
Application March 18, 1947, Serial No. 735,384
2 Claims. (Cl. 91—51)

1. Apparatus for providing wire with a uniform concentric coating of liquid insulating material comprising a closed container for said liquid insulating material, an applicator roll to apply an excess of coating material to the wire and at least one blotting roll to remove said excess, each of said rolls being mounted to rotate within said container, a shield structure surrounding the lower part of each of said applicator and blotting rolls, said shield structure having a lower outer portion arranged for contact with said coating liquid and an upper portion extending above the level of liquid in said container and an inner portion having a surface concentric with and in closely spaced relation to the adjacent roll surface, and orifice means in said lower portion to admit coating liquid to the concentric space between said roll and the adjacent shield surface, and each of said shields limiting the liquid contained in the concentric space between the inner portion of the shield and the adjacent roll surface to the amount of liquid delivered through said orifice means and confined in said concentric space; a doctor blade bearing against each of said rolls at a point intermediate between the top of said roll and the upper portion of said shield, means to pass a wire longitudinally in tangential contact with each of said rolls at the top thereof, means to impart to said blotting roll a peripheral speed exceeding the longitudinal rate of travel of the wire, the close spacing between the blotting roll surface and adjacent concentric shield surface in combination with the orifice means in the blotting roll shield and doctor blade for the blotting roll causing the quantity of liquid delivered to the top of the blotting roll to be limited to a thin blotting film even at blotting roll peripheral speeds as high as 1600 feet per minute.

2,462,475
STERILIZER FOR BARBERS' IMPLEMENTS
Abrame Di Filippo, Silver Spring, Md.
Application July 22, 1947, Serial No. 762,849
5 Claims. (Cl. 21—87)

1. A steriliser for barber's implements comprising an outer casing adapted to hold a sterilizing fluid, a receptacle disposed within said casing formed with wells shaped to receive and support the various implements, and said wells having downwardly extending bores connecting the same with the bottom surface of said receptacle.

2,462,476
DEVICE FOR MOUNTING SELECTIVE MULTIPLE PULLEYS UPON AN ELECTRIC MOTOR DRIVE SHAFT
Benjamin Dowick, Jersey City, N. J.
Application December 21, 1945, Serial No. 636,439
1 Claim. (Cl. 287—53)



A device for mounting selective multiple pulleys upon an electric motor drive shaft comprising a pulley normally required for driving a specific machine having rearwardly thereof and integrally therewith a cylinder, said pulley and cylinder having a bore clear therethrough, the bore in said cylinder having a portion thereof adapted to slide longitudinally over said motor drive shaft, means for removably securing said cylinder to said shaft, said bore being tapped, and said tapped portion being adapted for thereinto threading a screw for therewith selectively securing to said pulley one or more individual drive pulleys of varying diameters, for occasional different speeds required by said machine.

2,462,477
SAFETY JOINT
Charles R. Edwards, Houston, Tex.; Frances Rebertha Edwards executrix of said Charles R. Edwards, deceased
Original application May 13, 1940, Serial No. 334,947. Divided and this application April 26, 1945, Serial No. 590,227
10 Claims. (Cl. 255—28)

1. In a string of pipe for a well bore, a safety joint comprising a housing, a slidable sleeve in said housing having locking and unlocking positions, a clutch nipple mounted within said sleeve, rollable elements carried by openings in said sleeve and a row of circumferentially arranged cam wedge faces carried by said nipple adapted

to cooperate with said elements to lock said housing and nipple together, a raceway on said nipple adjacent said row of cam wedge faces, and a spring in the housing yieldingly urging the sleeve toward one of said positions.

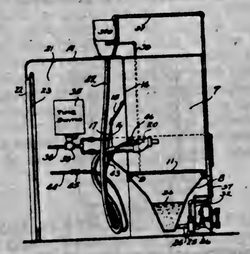
2,462,478
REVERSING TOOL
Charles R. Edwards, Houston, Tex.; Frances Rebertha Edwards executrix of said Charles R. Edwards, deceased
Original application May 13, 1940, Serial No. 334,947. Divided and this application June 5, 1945, Serial No. 597,705
12 Claims. (Cl. 255—35)

10. In a reversing tool a tubular housing comprising three relatively rotatable sections, reverse drive gearing including a plurality of axially spaced series of circularly arranged pinions, one of said sections including a plurality of annular pinion blocks secured in abutting relationship, and being of different length, said blocks being provided with longitudinal recesses for rotatably supporting said pinions, internal and external gears intermeshing with said pinions separately secured to the other two sections, said gears having continuous teeth substantially longer than the over-all length of said pinions whereby upon interchange of said pinion blocks the pinions may be selectively shifted to mesh with unworn portions of said gears.

2,462,479
RAT OR MOUSE TRAP
Eugene H. Elleby, Atlanta, Ga.
Application June 17, 1946, Serial No. 677,271
1 Claim. (Cl. 43—81)

In an animal trap, the combination, which comprises, a rectangular-shaped base having a centrally disposed longitudinally positioned opening extending inwardly from one end, a trigger pivotally mounted in said opening having a sloping under surface extending upwardly from a point below the pivotal mounting thereof, a bait-holding prong positioned on said trigger, an eye mounted on the inner end of the trigger, a centrally disposed retaining rod pivotally mounted on the base at a point spaced from the end opposite to that in which the opening is formed, said rod adapted to be positioned with the free end thereof in the eye of the trigger, a transversely disposed shaft mounted on the base at a point intermediate of the length thereof, a U-shaped bar having arms with recesses in the sides thereof pivotally mounted on the said shaft, a pair of springs mounted on said shaft with the inner ends connected by an extending loop adapted to contact the upper surface of the base and with the outer ends thereof positioned in the recesses of the arms of the U-shaped bar, and a U-shaped toothed bar having a flange on the underside mounted on the end of the base in which the opening is positioned, with the teeth extending upwardly above the upper surface of the base at the end thereof, and with the flange limiting downward movement of the trigger.

2,462,480
POLISHING METHOD AND APPARATUS
Arthur H. Eppler, Milwaukee, Wis.
Application January 8, 1944, Serial No. 517,533
21 Claims. (Cl. 51—8)



20. Polishing apparatus comprising an aqueous emulsion containing novaculite as an abrasive in suspension, in combination with means for circulating said aqueous emulsion in contact with work to be polished.

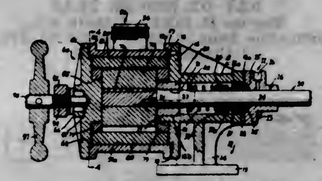
2,462,481
SLIDING VANE PUMP OR MOTOR
Maynard E. Estey, Canandaigua, N. Y., assignor, by mesne assignments, to Estey Products Corporation, Geneva, N. Y.
Application November 17, 1944, Serial No. 563,813
1 Claim. (Cl. 103—136)

and a pair of levers disposed adjacent opposite ends of said coil and each having one end pivotally connected to one of said plungers and its opposite end pivotally connected to the arm on the other of said plungers, said levers being pivotally supported upon stationary pivot pins located midway between the ends thereof and providing for

necting said control means selectively to either of said generators, and means for maintaining substantially constant voltage on the other of said generators, said driving motor being removable,

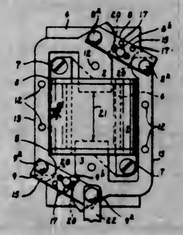
said body being beveled to engage one end of a pile, an inlet conduit for said body, a fluid receptacle communicating with said conduit, means

2,462,481
SLIDING VANE PUMP OR MOTOR
Maynard E. Estey, Canandaigua, N. Y., assignor, by mesne assignments, to Estey Products Corporation, Geneva, N. Y.
Application November 17, 1944, Serial No. 563,813
1 Claim. (Cl. 103—136)



A pump comprising a sleeve, an end wall at one end of the sleeve, a drive shaft passing through said sleeve, bearing means for said shaft within said sleeve, a hub on said end wall eccentric relative to the shaft, a ring concentrically mounted for rotation on said hub, said shaft having a portion extending beyond said end wall, a rotor on the extending portion of said shaft, said rotor being concentric with respect to said shaft, a casing contacting said end wall and disposed concentrically of said hub, an end wall at the opposite end of said casing to close the same, said second end wall being formed with a hub on the inner side thereof concentric with respect to said casing, a ring on said second hub concentric therewith and mounted for rotation thereon, said rotor being disposed between said rings, said rotor being formed with a pair of diametrically opposed longitudinal surface grooves, said rings each being formed with a pair of diametrically opposed notches registering with said grooves, the walls of said grooves and of said notches being radially disposed to present tapered recesses, divider bars in each groove extending into the notches in said rings, said divider bars being of segmental cross-section to correspond with said tapered recesses, said casing being formed with an inlet and an outlet passage, and means to fix said end walls and casing together.

2,462,482
ELECTROMAGNET WITH PLUNGER
Clarence T. Evans, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 23, 1946, Serial No. 664,167
2 Claims. (Cl. 175—341)



1. The combination with a stationary magnet coil, of a pair of opposed operating plungers extending into opposite ends of said coil and normally spaced apart to provide an air gap therebetween, each of said plungers having an arm on one side thereof and said arms being disposed in parallel relation on opposite sides of said coil, and a pair of levers disposed adjacent opposite ends of said coil and each having one end pivotally connected to one of said plungers and its opposite end pivotally connected to the arm on the other of said plungers, said levers being pivotally supported upon stationary pivot pins located midway between the ends thereof and providing for equal movements of said plungers in unison toward and away from each other to close and open said air gap upon energization and deenergization of said coil.

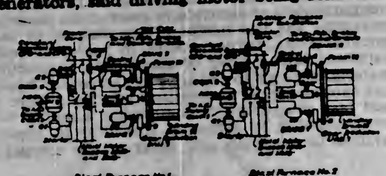
2,462,483
TIE CLASP
Julian F. Fontaine, Detroit, Mich.
Application March 12, 1947, Serial No. 734,684
4 Claims. (Cl. 2—154)

2. A two-element tie clasp of the kind described comprising a mounting plate affixed to the back side of the tie, said plate including a flat center portion and two laterally extending marginal flanges disposed in a plane spaced from the tie, and a receiving member made of an oblong flat strip of rigid material, the strip having a rectangular-shaped central flat portion, and having members looped upon said center portion from opposite sides to form means for a sliding engagement of the flanges of the mounting plate, the looped members continuing in a reverse loop, each being provided with an eye for connection to a collar encircling band.

4. A two-element tie clasp comprising a plate mounted on the back of a tie, the plate including vertical side flanges in a plane spaced from the tie, and a receiving member for said mounting plate, connected to a collar encircling textile band, said receiving member being made of an oblong strip of material, the strip including a rectangular flat center, a pair of members integrally connected thereto and looped from opposite ends over the sides of the flat center to form receiving folds for the flanges of the mounting plate, lugs extending outwardly from the body of the receiving member to close from the bottom the space defined by the loops, and a pin slideably mounted on the receiving member for a manual shift laterally into an aperture in the side of the mounting plate for retention thereof in its place.

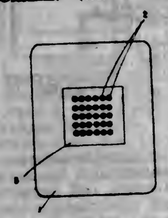
2,462,484
SKIP HOIST CONTROL
Gordon Fox, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a corporation of Maine
Application December 29, 1944, Serial No. 570,319
19 Claims. (Cl. 254—173)

7. In a skip hoist control, in combination, a motor generator set comprising a driving motor and two generators adapted to be driven by said motor, switching mechanism for alternatively connecting either of said generators to motive means for a skip hoist for driving the skip mechanism of a blast furnace, control means responsive to said skip hoist for adjusting the voltage of one of said generators, switch mechanism for connecting said control means selectively to either of said generators, and means for maintaining substantially constant voltage on the other of said generators, said driving motor being removable,



the rotors of said two generators being adapted to be connected together whereby one of said generators may operate as a motor for driving the other of said generators.

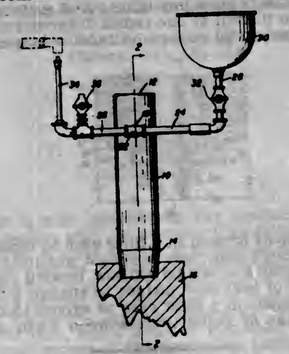
2,462,485
MEANS FOR TESTING COLOR VISION
Ellis Freeman, Sarasota, Fla.
Application February 7, 1946, Serial No. 646,123
2 Claims. (Cl. 88—20)



1. A chart-device for testing color vision, of the class of polychromatic plates marked with colors which are distinguishable apart by the color-competent and indistinguishable by the color-defective in the same illuminant in which said colors were selected for the plates; which consists of one or more plates having a test display surface on which are applied color patches which fall within a spectral range of 517 and 670, in dominant wave-lengths, and within said range are all colors which differ from each other by approximately three millimicrons in dominant wave-lengths, and only such colors as so differ serially and which are—under Illuminant C (6500 degrees Kelvin)—of equal brightness among themselves, and of equal purity among themselves, and are each and all of maximal purity consistent with that equality of purity among themselves, and with that equality of brightness among themselves; whereby when such a test plate on which the colors are all as so specified, is presented to a subject for test under an illuminant which varies in color temperature from that of the said Illuminant C in which the test plate colors were selected, the said color patches will still remain of such equal purity and equal brightness and still remain distinguishable by the color-competent and undistinguishable by the color-defective, despite said variation in color temperature of the illuminant.

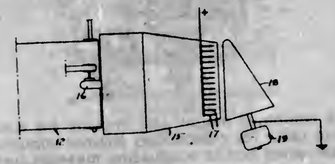
2,462,486
DEVICE FOR TREATING TIMBER
Clinton J. Gregory, Hot Springs, S. Dak.
Application July 29, 1947, Serial No. 764,398
6 Claims. (Cl. 21—7)

1. A device for treating timber comprising a hollow body closed at one end, the opposite end of said body being beveled to engage one end of a pile, an inlet conduit for said body, a fluid receptacle communicating with said conduit, means



for regulating a flow of fluid from said receptacle to said conduit, an air pressure line connected to said conduit, and means for regulating pressure entering said conduit.

2,462,487
APPARATUS FOR FORMING FELT
Ivor Griffith, Elkins Park, Pa., and Alfred P. Huchberger, New York, N. Y., assignors to The Frank H. Lee Company, Danbury, Conn., a corporation of Connecticut
Application December 28, 1945, Serial No. 637,737
2 Claims. (Cl. 19—144)



1. In a device for depositing feltable fibers upon a cone, in combination, a rotating cone, a generally rectangular nozzle mounted adjacent thereto, with the generatrix of the cone parallel to the longer dimension of the rectangular nozzle, means for discharging feltable fibers through said nozzle, and a plurality of point electrodes insulatingly mounted on said nozzle in rows, one on either side of the exterior of the nozzle, the points of said electrodes terminating short of the nozzle mouth, said electrodes and said cone being oppositely charged to a high potential whereby fibers emerging from said nozzle are placed in streams of ionized air and are thereby charged with the same charge as said electrodes and attracted to the oppositely charged cone.

2,462,488
CONTROL PLATE FOR FILTER CARTRIDGES
Earl G. Gunn, Providence, R. I., assignor to Fram Corporation, a corporation of Rhode Island
Application June 7, 1945, Serial No. 598,128
3 Claims. (Cl. 210—62)

1. A filter element comprising a filter medium having a central axial opening, a bottom plate having a hole which communicates through said medium to said opening, an auxiliary plate spaced

from the bottom plate and provided with a hole which communicates through the space between said plates with the said hole in the bottom plate, said auxiliary plate providing a first surface about said hole therein at one radial distance from said axial opening to engage by face to face contact

partment housing wherein said compartments are elongated, parallel and of unequal length and have the bottoms thereof continuous and on the same plane, a longitudinal partition between the compartments of electrically conducting material extending the full height of the shorter of said

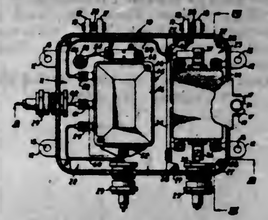
compartment between two sub-compartments, one adjacent each terminal, substantially shielded

2,462,493
SEAL FOR PIPE-LINE FITTINGS
Leland S. Hamer, Long Beach, Calif., assignor of one-fourth to Paul A. Dewhirst, Los Angeles, Calif.
Application July 19, 1944, Serial No. 545,602
3 Claims. (Cl. 138—44)

from the bottom plate and provided with a hole which communicates through the space between said plates with the said hole in the bottom plate, said auxiliary plate providing a first surface about said hole therein at one radial distance from said axial opening to engage by face to face contact

an abutment located in a filter case to block passage through said hole and said auxiliary plate also providing a second surface located radially inwardly of said first surface to engage a different abutment in a filter case to expose said hole for passage of liquid therebetween when so engaged.

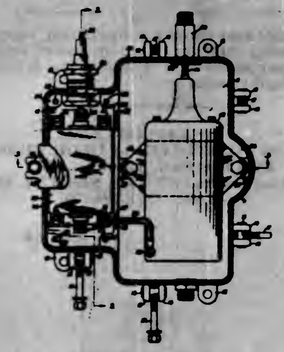
2,462,489
MULTIPLE SHIELDED ASSEMBLY UNIT
Elton C. Hallett, Inglewood, Calif., assignor to Hallett Manufacturing Company, Inglewood, Calif., a corporation of California
Application September 17, 1945, Serial No. 616,873
3 Claims. (Cl. 123—148)



1. A combined mount and housing for electric ignition units for combustion engines comprising a water-proof box of conducting material having side walls and a removable lid of conducting material secured at the tops of the side walls with a water tight, electrically continuous connection, extensions on said box adapted for attachment to a combustion engine, said box having a regulator compartment and having a filter compartment and a metal partition means segregating said last compartment from the regulator compartment, electric units in said respective compartments electrically connected in circuit and grounded to the box, water resistant connections in the housing walls for electric leads respectively to the electric units, said partition means having an aperture of relatively small size for an internal electric connection between the units.

2,462,490
SHIELDED HOUSING FOR IGNITION COILS AND FILTERS
Elton C. Hallett, Inglewood, Calif., assignor to Hallett Manufacturing Company, Inglewood, Calif., a corporation of California
Application September 17, 1945, Serial No. 616,874
4 Claims. (Cl. 123—148)

1. A combination electric and moisture resistant shield for electric units of the ignition system of a combustion engine comprising a two compartment housing wherein said compartments are elongated, parallel and of unequal length and have the bottoms thereof continuous and on the same plane, a longitudinal partition between the compartments of electrically conducting material extending the full height of the shorter of said compartments, corner bosses in said last compartment and a cover of electrically conducting material secured to the tops of the corner bosses and said partition, a mounting unit for a filter in said last compartment comprising a single element adapted to surround the filter in spaced relation to the walls and cover of the compart-

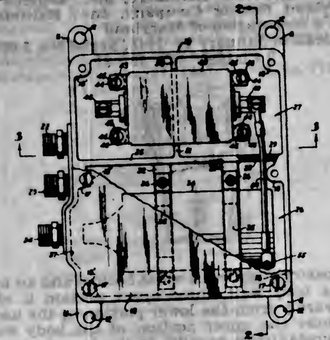


ment and to engage projections on the bottom thereof, a mounting unit for the coil comprising a laterally extending coil supporting bridge secured to the coil intermediate the ends and bolt posts securing the bridge to internally rounded projections in the bottom of the longer compartment laterally disposed relative to the coil, endwise, substantially axial connections from the units extending throughout the compartment wall in waterproof relation thereto, a connection through the partition from the filter to the coil, and a lid overlying both compartments sealed at the edges thereof with a waterproof seal.

2,462,491
IGNITION COIL AND FILTER SHIELD ASSEMBLY
Elton C. Hallett, Inglewood, Calif., assignor to Hallett Manufacturing Company, Inglewood, Calif., a corporation of California
Application October 22, 1945, Serial No. 623,774
4 Claims. (Cl. 123—148)

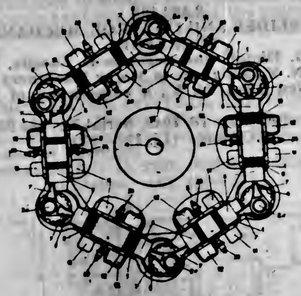
3. In an internally shielded housing for electric units of a combustion engine ignition system the combination of an ignition coil casing, a filter casing and a box having an internal partition dividing the interior into a compartment for reception of said ignition coil casing and a compartment for reception of said filter coil casing adapted for inclusion of a filter having hot and cold wire terminals at the respective ends thereof, and a lid for the box, one said compartment having a boss of electrically conducting material on the bottom intermediate the ends extending from side wall to side wall for supporting the filter, vertical ribs of electrically conducting material on the side walls in the same plane as the boss extending inwardly to the filter, and a transverse rib forming part of the lid spanning the distance between the tops of the vertical ribs and extending inwardly to the filter, said ribs jointly with the filter comprising a partition in the smaller

compartment between two sub-compartments, one adjacent each terminal, substantially shielded



electrically from each other and from the larger compartment.

2,462,492
MULTICYLINDER ENGINE
Georges Roger Hamel, Paris, France
Application April 7, 1945, Serial No. 587,171
In France August 24, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 24, 1962
5 Claims. (Cl. 123—51)

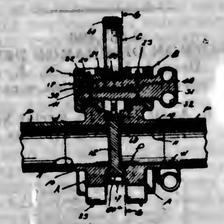


3. A polyhedral engine unit comprising an even number of cylinders greater than two, defining a polygon, a driven shaft coinciding with the axis of the polygon, opposed pistons in each cylinder, a crankshaft at each vertex of the polygon and connected to adjacent pistons, exhaust means and intake means provided at opposite ends of each cylinder, the cylinder ends having exhaust means being adjacent each other and the cylinder ends having intake means being adjacent each other, and the intake means adjacent one-half the number of vertices alternating with the exhaust means adjacent the other half, a spur wheel at each of the vertices driven by the crankshafts, the crankshafts at the exhaust ends of the cylinders driving their spur wheels in one direction and the crankshafts at the intake ends of the cylinders driving their spur wheels in the opposite direction, and gear means meshed with each of said spur wheels for driving said driven shaft.

2,462,493
SEAL FOR PIPE-LINE FITTINGS
Leland S. Hamer, Long Beach, Calif., assignor of one-fourth to Paul A. Dewhirst, Los Angeles, Calif.
Application July 19, 1944, Serial No. 545,602
3 Claims. (Cl. 138—44)

1. In a pipe line fitting, two sections, one a body section with an opening therethrough and the other a plate section arranged at the opening, the sections having opposing faces, and sealing means around the opening including a packing ring carried in a groove in one face and having a projecting portion projecting beyond the grooved face, there being a V-shaped notch in the inner corner of the projecting portion forming a tapered lip facing the opening.

2,462,494
PIPE FITTING
Leland S. Hamer, Long Beach, Calif., assignor of one-fourth to Paul A. Dewhirst, Los Angeles, Calif.
Application July 19, 1944, Serial No. 545,605
15 Claims. (Cl. 138—44)



1. In a fitting of the character described, a body having relatively movable parts with opposed faces, an elongate plate section with spaced parts adapted to be inserted between the said faces, and clamp means slidably pivotally coupling the plate section and the body parts joining them together against separation and allowing lengthwise movement of the plate section and also pivotal movement of the plate section about an axis to position selected parts of the plate section between the faces, the clamp means acting between the body parts clamping them to the plate section.

2,462,495
DUAL ACTION SWITCH
William B. Harrison, Jr., Richmond, Va.
Application June 13, 1946, Serial No. 676,468
2 Claims. (Cl. 200—1)

1. In a switch device, a support, an actuator member mounted for reciprocating and rotating movement on said support, said actuator member having an enlarged cylindrical end, one portion of which is provided with two flat recesses on opposite sides of the axis of said actuator and forming shoulders at the junction of said recesses and said cylindrical portion, a plurality of spring

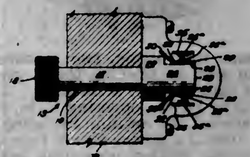
biased switch contact elements mounted on said support and adapted to move in a plane transversely of the axis of said actuator, said contact elements provided with parallel flat cam surfaces

2,462,497
ICE-CREAM CUP
Albert A. Heyman, Baltimore, Md., assignor to Maryland Baking Company, Inc., Baltimore,

2,462,499
PROCESS FOR RECOVERING MANGANESE VALUES FROM MANGANESE ORES
Richard D. Hoak, Mount Lebanon Township,

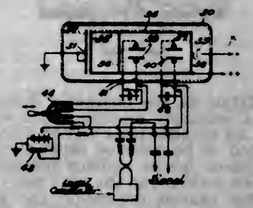
member in said housing operatively connected to said pistons for rotation thereby upon movement of said pistons and adapted to be connected to volume control means on said pump, means acting on said first piston and tending to move said

biased switch contact elements mounted on said support and adapted to move in a plane transversely of the axis of said actuator, said contact elements provided with parallel flat cam surfaces overlying the recessed portion of said actuator member, said contact elements also having laterally disposed inclined cam elements simultaneously overlying said cylindrical portion, said inclined cam elements adapted to be engaged by the shoulders between said recesses and said cylindrical portion of said actuator upon axial movement of the latter and said flat cam surfaces



adapted to be engaged by the edges of said flat recesses upon rotational movement of said actuator to move said contact elements into separated relation whereby said contacts may be moved into non-holding separated relation by axial movement of said actuator while the shoulders on said actuator are held against said spring biased inclined cam elements, or into a held separated relation by rotational movement of said actuator causing said flat cam elements to be engaged by the edges of said flat recesses.

2,462,496
ELECTRON DISCHARGE DEVICE
Edward W. Herold, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 24, 1942, Serial No. 440,283
17 Claims. (Cl. 315—6)

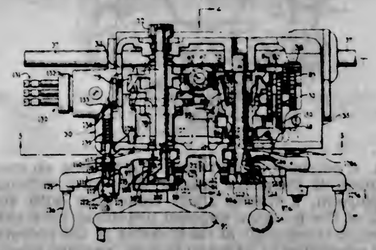


1. An electron discharge device having a cathode for supplying a beam of electrons and a collector for receiving said electrons, and an apertured member positioned between said cathode and collector through which said beam of electrons may be directed toward said collector, and deflecting means positioned between the cathode and apertured member and including a plurality of successive pairs of oppositely disposed deflecting elements between which the beam of electrons is directed, said deflecting elements of each pair being adapted to have an alternating potential of high frequency applied therebetween, said pairs of deflecting elements being spaced along the path of travel of the electron beam and means coupled with said deflecting elements for adjusting the phase relationship of the applied voltage on each pair of deflecting elements to provide optimum additive deflection of said beam of electrons.

2,462,497
ICE-CREAM CUP
Albert A. Heyman, Baltimore, Md., assignor to Maryland Baking Company, Inc., Baltimore, Md., a corporation of Maryland
Application January 29, 1948, Serial No. 5,021
2 Claims. (Cl. 99—89)

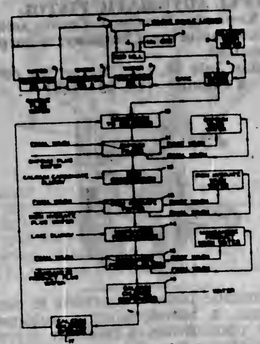
1. A pastry cup having a flat bottom and an upstanding body wall whose upper portion is offset outwardly from the lower portion of the body wall proper the upper portion of the body wall being substantially parallel to the lower portion of the body wall; an annular series of wedges in said enlarged upper portion positioned with their bases in proximity at the lower extremity of said enlarged upper portion and having their inner-side surfaces constituting a continuation of the inner-side face of the body wall proper and having their upper ends terminating short of the mouth of the cup; radial ribs connecting the wedges with the wall of said enlarged portion; and a nesting ring on the outside of said enlarged portion for seating on the mouth ring of a similar cup when cups are nested together.

2,462,498
CROSS SLIDES AND CONTROL MECHANISM THEREFOR
Morris G. Himoff and Secondo L. Casella, New York, N. Y., assignors to Mercy Machinery Co., Inc., New York, N. Y., a corporation of New York
Application July 16, 1943, Serial No. 494,926
6 Claims. (Cl. 192—93)



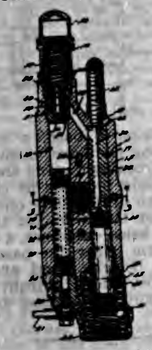
1. In combination, a shaft, a member mounted thereon and provided with a clutch means, a second member on the shaft provided with clutch means adapted to engage the first clutch means, a lever on said shaft, means effective upon rotation of the lever in one direction of rotation to cause the clutch means of said members to be engaged and in an opposite direction of rotation to permit said clutch means to declutch, releasable means to retain the lever in clutching position, a lever arm rotatably mounted on the lever about an axis parallel to said shaft, and cam means effective upon movement of the lever arm in said opposite direction of rotation to disengage the retaining means.

2,462,499
PROCESS FOR RECOVERING MANGANESE VALUES FROM MANGANESE ORES
Richard D. Hesk, Mount Lebanon Township, Allegheny County, Pa., assignor to Mellon Institute of Industrial Research, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 27, 1947, Serial No. 776,505
9 Claims. (Cl. 23—87)



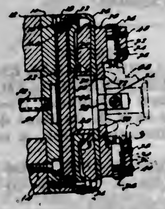
6. In the process of recovering manganese from manganese ores, the steps comprising leaching the ore with an aqueous acidic solution of a ferrous salt of the group consisting of ferrous sulphate and ferrous chloride, removing the solids, raising the pH of the extract containing the corresponding salts of manganous manganese and ferric iron to about 3.0–4.0, thereby precipitating ferric hydroxide, removing the precipitate, and recovering a manganese product from the filtrate.

2,462,500
COMPENSATOR CONTROL FOR PUMPS
James F. Hoffer, Detroit, Mich., assignor to Superdraulic Corporation, Dearborn, Mich., a corporation of Michigan
Application July 12, 1946, Serial No. 683,349
10 Claims. (Cl. 103—37)



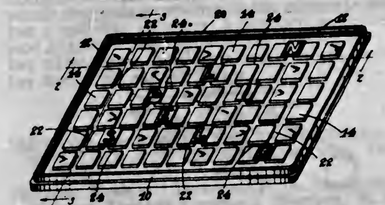
1. In combination, a variable delivery pump having means for varying the volumetric delivery thereof, and a pressure actuated volume control unit adapted to be used with said variable delivery pump, said unit comprising a housing having first and second bores therein, first and second pistons in said bores respectively, a rotatable member in said housing operatively connected to said pistons for rotation thereby upon movement of said pistons and adapted to be connected to volume control means on said pump, means acting on said first piston and tending to move said first piston toward full volume position, and pressure connections between the pump and said second bore and acting on said second piston to move said second piston and said rotatable member in response to variations in pump pressure.

2,462,501
DIAPHRAGM CHUCK
George Hohwart and Ernest F. Hohwart, Detroit, Mich., assignors to N. A. Woodworth Company, Ferndale, Mich., a corporation of Michigan
Application June 10, 1947, Serial No. 753,785
9 Claims. (Cl. 279—46)



3. In a chuck, in combination, a body, and a plurality of jaw assemblies secured to the outer face of said body in angularly spaced relation with respect to each other about the axis of said chuck, each said jaw assembly comprising a jaw block and a pin rotatably and axially movably supported thereby with its axis extending radially with respect to the axis of said chuck, the radially inner end of each said pin being tapered into wedge-like form and adapted to be received between adjacent teeth of a spiral gear comprising a workpiece carried by said chuck with its medial plane aligned with the direction of length of said teeth, said tapered ends of said pins being relieved centrally of their opposite wedge faces whereby to limit contact between said ends and the teeth of a gear received thereby to points spaced axially of said chuck from one another.

2,462,502
ASSEMBLY DEVICE FOR SPELLING BLOCKS
Adolf Israel Horwitz, London, England, assignor to Olafirn Limited, London, England, a British company
Application May 26, 1947, Serial No. 750,538
In Great Britain June 25, 1946
4 Claims. (Cl. 235—73)



1. Apparatus for use in connection with spelling, word-building and like games, comprising a tray having a bottom and upstanding sides, a plurality of similar tables upstanding from the bottom of the tray and arranged in spaced rank

and file with a plurality of tables in each rank and each file each table comprising a central pillar and a rectangular top extending laterally from the pillar around the upper end thereof, the

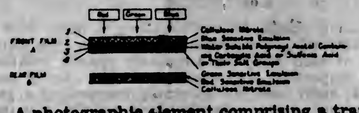
flanges, a tightening band about the arch between the flanges to surround the clamp and tighten it radially and press the flanges apart and also toward the pipe and a patch adapted to

a radial arm, said arm being mounted to rotate about a pivot disposed intermediate the ends of the arm and being provided with an offset adjacent said pivot, said arm extending toward said

wheel to be turned and having a portion thereof extending adjacent to the periphery of the flywheel with a series of teeth therein adapted to

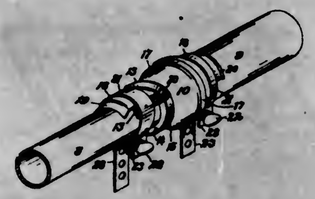
and file with a plurality of tables in each rank and each file each table comprising a central pillar and a rectangular top extending laterally from the pillar around the upper end thereof, the lower ends of which tables are fitted within recesses formed in the bottom of the tray to hold the tables in the spaced ranks and files with the edges of the table tops in line in each rank and each file so as to form straight intersecting passageways between the ranks and files, a plurality of letter elements each having a stem received within one of the passageways and manually movable therealong and from one passageway to another and each having enlarged top and bottom portions attached to the two ends of the stem respectively to lie respectively above and below and to overlap the edges of successive pairs of table tops as the element is moved and the upper end of each of which letter-elements carries on its upper surface a symbol.

2,462,503
PHOTOGRAPHIC FLURAL EMULSION LAYER STRIPPING FILM
Andrew Bradshaw Jennings, New Brunswick, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 5, 1946, Serial No. 651,996
9 Claims. (Cl. 95—2)



1. A photographic element comprising a transparent film base having superimposed thereon in order a water-permeable colloid silver halide layer which is predominantly sensitive to at least the blue region of the visible spectrum, a removable water-soluble, light-insensitive colloid layer composed of a water-soluble acetal of a vinyl alcohol polymer with an aldehyde containing a group taken from the class consisting of free sulfonic acid groups, free carboxylic acid groups, and their water-soluble salts but which aldehyde is otherwise unsubstituted and a water-permeable colloid silver halide layer which is sensitive to the blue region of the spectrum and at least one primary color region of the spectrum different from that of the first layer.

2,462,504
PIPE CLAMP
Samuel M. Kass, Philadelphia, Pa.
Application January 18, 1945, Serial No. 573,327
4 Claims. (Cl. 138—99)

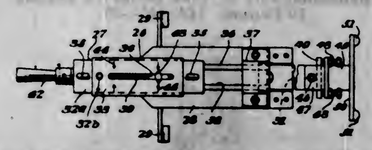


1. In a repair clamp for pipe leakage occurring at a coupling flange location, a longitudinally arched laterally curved resilient repair clamp having flanges at axially opposite ends and partly surrounding the pipe transversely between the flanges, a tightening band about the arch between the flanges to surround the clamp and tighten it radially and press the flanges apart and also toward the pipe and a patch adapted to fit against the pipe adjacent the pipe flange and to be engaged by one of the clamp flanges.

2,462,505
FULL AUTOMATIC PISTOL
Horace J. Kennedy, Hartford, Conn., assignor to Colt's Manufacturing Company, a corporation of Connecticut
Application July 28, 1945, Serial No. 607,579
8 Claims. (Cl. 89—140)

1. An automatic pistol comprising in combination, a frame, a barrel, a slide automatically reciprocable upon firing, a hammer movable to cocked position by the slide upon recoil movement thereof, a sear for holding the hammer in cocked position and having a cam surface thereon, a trigger, and a member reciprocably mounted in said frame and engageable by the slide for movement thereby and having a cam surface thereon movable to and from a position of engagement with the cam surface on said sear to effect hammer releasing movement of the sear upon reciprocation of said member.

2,462,506
ANODE BAR JACK
Clarence J. Klein, Hallidays Cove, W. Va., assignor to National Steel Corporation, a corporation of Delaware
Application February 10, 1944, Serial No. 521,795
1 Claim. (Cl. 254—134)

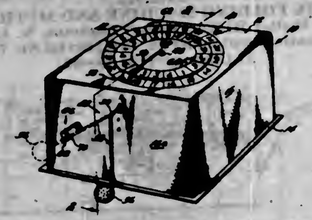


A jack comprising a base, a slide movable longitudinally along the base, means carried on the base for reciprocably moving the slide therealong, a pusher head movable by the slide, said head comprising an arm having one end thereof pivotally carried by the slide and the other end thereof extending below said base, a bearing head carried by said arm below the base and means for adjusting the bearing head angularly with respect to the slide, and a plurality of bearing members for supporting the base and the parts carried thereby.

2,462,507
GAME DEVICE
Seren M. Klyver, Los Angeles, Calif.
Application November 28, 1947, Serial No. 788,596
2 Claims. (Cl. 273—35)

1. A game device comprising: a surface bearing scoring indicia arranged in an annular path;

a radial arm, said arm being mounted to rotate about a pivot disposed intermediate the ends of the arm and being provided with an offset adjacent said pivot, said arm extending toward said path from the center thereof and mounted for pivotal movement about said center; and operating means for rotating said pivoted arm, said means comprising a crank lever mounted so as to swing in a generally vertically plane and having a free end thereon, the other end of said crank lever being offset, said offset being of sufficient length to contact the offset on said radial arm.

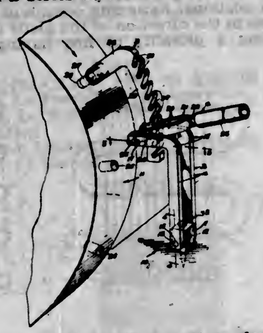


2,462,508
UNDERGARMENT
Arthur R. Kneibler, Kenosha, Wis., assignor to Cooper's, Incorporated, Kenosha, Wis., a corporation of Wisconsin
Application September 27, 1945, Serial No. 618,809
5 Claims. (Cl. 2—224)

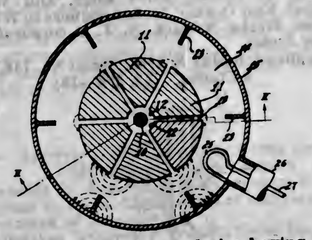
1. An undergarment comprising a body portion of knitted material having front and back sections, and leg portions of knitted material connected to said body portion, each of said leg portions being connected to said body portion by a seam which is located along the line of the adjacent groin of the wearer of said garment, the adjacent edge of the crotch of said body portion and the adjacent edge of the back section of said body portion, a hem and reinforcing member for each of said leg portions, each comprising a layer of knitted material overlapping the base of the associated leg portion, and an extension of knitted material secured to the inside of each of said leg portions above the base thereof, each extension having its edges secured at the location of said seam at the adjacent edge of the crotch of the body portion of said garment.

2,462,509
CRANKING JACK FOR DIESEL ENGINES
Joseph H. Kobbe, Savanna, Ill.
Application June 16, 1945, Serial No. 599,925
7 Claims. (Cl. 254—121)

7. In a device of the class described, a support adapted to be anchored against movement in at least one direction, a lever fulcrumed on the support having a transversely extending tooth-engaging element and a handle on the lever for moving said element with mechanical advantage, and an arm adapted to be detachably anchored at selective points along the periphery of a flywheel to be turned and having a portion thereof extending adjacent to the periphery of the flywheel with a series of teeth therein adapted to be engaged by the tooth-engaging element of the lever to rotate the flywheel with mechanical advantage.



2,462,510
ELECTRON DISCHARGE DEVICE AND ASSOCIATED CIRCUIT
Nathaniel I. Korman, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 17, 1945, Serial No. 616,911
5 Claims. (Cl. 315—6)



1. An electron discharge device having a hollow drum-shaped conducting member, a plurality of anode elements of sector-shaped transverse section mounted within said member in spaced relation thereto, whereby the inner wall of said drum-shaped member and the outer surfaces of said sector-shaped anode elements provide a cavity resonator, said anode elements being spaced from each other along radial planes to provide radially-directed slots, the inner ends of said anode elements providing anode segments defining a cathode chamber, a cathode mounted in said chamber, the radial length of said slots being effectively a half-wavelength of the operating frequency of said device.

2,462,511
METHOD OF PRODUCING CONDENSERS OR THE LIKE FOR HEAT EXCHANGE APPARATUS
Nathan Kramer, Trenton, N. J., assignor to Kramer Trenton Company, Trenton, N. J., a corporation of New Jersey
Application January 12, 1945, Serial No. 572,563
2 Claims. (Cl. 29—157.3)

1. A method of producing an apparatus of the character described, which includes the follow-

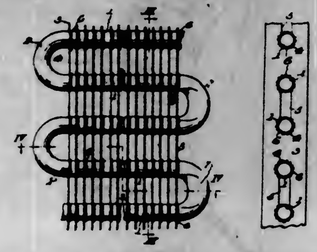
ing steps: providing a single piece tube bent sinuously in a single plane and having substantially straight parallel portions connected by

said locking means be manipulated to release said coupling members until after the valve actuating means has been manipulated to close said

ing of the temperature altering means comprising temperature responsive means interposed in the said ignition circuit to open and close said circuit, means responsive to a predetermined tem-

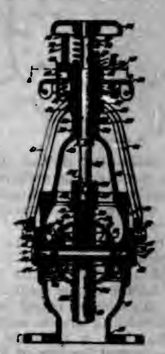
strands to form a braided covering over the core, and twisting the core and the covering in such a direction as to wind the metallic strands more tightly around the core so that the metallic strands tend to cling to the core.

ing steps: providing a single piece tube bent sinuously in a single plane and having substantially straight parallel portions connected by curved portions; flattening certain of the curved portions in the direction of the plane of the tube; providing a plurality of fins having apertures



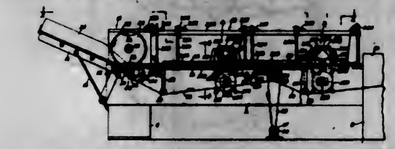
corresponding in shape with the combined cross section of the straight and flattened curved portions of the tube; and moving the tube and fins with respect to each other to cause the flattened curved portions of the tube to pass through the said apertures and the fins to be seated on the said straight portions.

2,462,512
VALVED COUPLING FOR FLUID CONDUCTING LINES
Howard C. Krone, River Edge, and William Meyer, East Orange, N. J., assignors to Wheaton Brass Works, Newark, N. J., a corporation of New Jersey
Application May 8, 1947, Serial No. 746,744
8 Claims. (Cl. 285—18)



1. A coupling for connecting fluid conducting lines comprising separable coupling members adapted to be aligned end to end, manipulatable means for locking said coupling members together in joined and sealed relation, each coupling member having an axially movable valve for normally closing the same, an axially disposed manipulatable means common to both said valves for opening and closing the same by relatively opposite axial movements, and means for so relating said locking means and said valve actuating means that said valve actuating means cannot be manipulated to open said valves until after the locking means has been operated to couple and seal the coupling members, nor can said locking means be manipulated to release said coupling members until after the valve actuating means has been manipulated to close said valves.

2,462,513
BOX FOLDING MACHINE AND METHOD
Walter H. Kuckinsky, Paramus, N. J.
Application September 26, 1947, Serial No. 776,227
17 Claims. (Cl. 93—49)

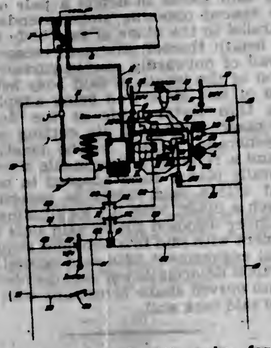


1. The method of folding a transverse flap on a transverse edge of a box blank as such blank travels continuously, said transverse flap being scored diagonally at its corners, which comprises pressing the flap out of the plane of the blank to a substantial angle therewith by a pressing force applied to one side of the flap, thereafter completing the fold of such flap by applying a second pressing force to the upbent flap on the same side thereof in a direction generally parallel to the plane of the material, and parallel to the direction of travel of the blank and during the above two folding operations restraining the corners of the flap outside the diagonal score lines from moving with the flap a substantial distance in a direction normal to the blank, whereby each of such corners is given a reverse fold upon the folded flap.

4. A machine for folding a flap on each of a succession of blanks of sheet material transversely to their path of travel while such blanks travel continuously substantially in their planes, which comprises conveying means for forwarding the blanks in predetermined spaced relationship, a folding station to which the conveying means presents the blanks, means at the folding station operating in timed relationship to the conveying means to press a flap on the same transverse edge of each of the blanks on the conveying means out of the plane of the blank to a substantial angle with the body of the blank, and means at the folding station to complete the folding of the flap on each blank by pressing the raised flap in a direction substantially parallel to the plane of the main body of the blank and toward the line of juncture of the flap and the body of the blank, said last named folding means comprising at least one folding finger on the side of the path of travel of the blanks toward which the first pressing means thrusts the flap, means for supporting the finger and means for operating the folding finger in timed relation to the presentation of the blank at the folding station.

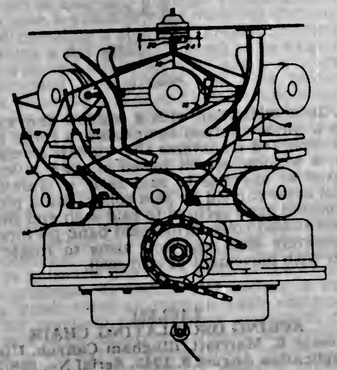
2,462,514
APPARATUS FOR THE CONTROL OF COOLING SYSTEMS
Timothy J. Lehane and Everett H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation, a corporation of Delaware
Application July 18, 1946, Serial No. 684,625
8 Claims. (Cl. 62—4)

1. In combination with means for altering the temperature of an enclosed space including an internal combustion engine having an electrical ignition circuit and an electrically energized starter, of means for controlling the functioning of the temperature altering means comprising temperature responsive means interposed in the said ignition circuit to open and close said circuit, means responsive to a predetermined temperature within the enclosed space for closing an electrical energising circuit through said starter, means operated by the engine for opening the last



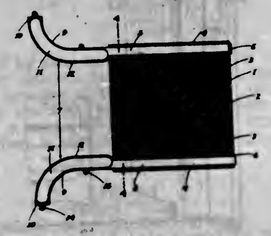
mentioned circuit, a throttle valve for the engine, electrically energized means for opening the throttle, and means defining an electrical energising circuit for said throttle operating means connected through the last mentioned temperature responsive means, whereby said starter and said throttle operating means are energized simultaneously.

2,462,515
METHOD OF AND APPARATUS FOR BRAIDING
Brooke W. Lerch, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 9, 1947, Serial No. 778,773
6 Claims. (Cl. 87—6)



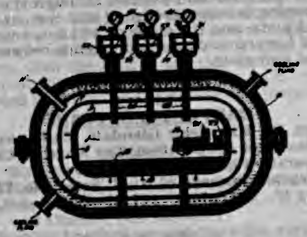
1. The method of braiding coverings upon cores, which comprises advancing a core in a predetermined direction along a predetermined path rotating a plurality of non-metallic strands in a predetermined direction around said core, rotating a plurality of metallic strands around the core in a direction opposite to that in which the non-metallic strands are rotated, interbraiding the metallic strands with the non-metallic strands to form a braided covering over the core, and twisting the core and the covering in such a direction as to wind the metallic strands more tightly around the core so that the metallic strands tend to cling to the core.

2,462,516
INDUCTION MOTOR ROTOR
Robert G. Le Tourneau, Longview, Tex., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation
Application January 17, 1947, Serial No. 722,729
9 Claims. (Cl. 172—120)



1. An induction rotor including conductor bars in circumferentially spaced relation and extending to one end of the rotor, and a resistance blade assembly connected in electrical relation to the conductor bars and disposed beyond said one end of the rotor for rotation therewith; said resistance blade assembly including blades extending from the bars lengthwise of the rotor and then bending laterally outwardly whereby to increase the effective diameter of said assembly, each blade being concavo-convexo in cross section to provide rigidity and a fan effect.

2,462,517
METHOD OF MANUFACTURE OF LUMINESCENT MATERIALS
Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 29, 1942, Serial No. 460,054
3 Claims. (Cl. 252—301.6)



1. The method of making a phosphor which consists in vaporizing a compound consisting of sulphur and a member from the group consisting of zinc and cadmium and mixtures thereof under pressure higher than atmospheric, separately vaporizing an activator selected from the group consisting of copper and silver, mixing said vapors and co-crystallizing said compound and the activator therefrom.

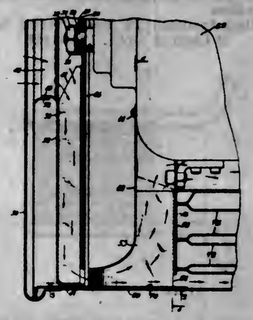
2,462,518
AIR COMPRESSOR
Calvin D. MacCracken, New Rochelle, N. Y., assignor, by direct and mesne assignments, to Jet-

with a plurality of comb teeth along one edge thereof and an elongated recess in one face in spaced relation to the tips of said teeth throughout a portion of the length of said body, first

chair when desired; and a spring means attached to the rear lower end of the framework and to a

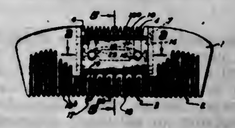
to a door frame and a keeper assembly, including a mounting plate, a keeper element secured to said plate and adapted to extend through said hasp and receive a lock to secure the door in nor-

2,462,518
AIR COMPRESSOR
Calvin D. MacCracken, New Rochelle, N. Y., assignor, by direct and mesne assignments, to Jet-Heet, Inc., New York, N. Y., a corporation of New York
Continuation of application Serial No. 676,827, June 22, 1946. This application December 14, 1946, Serial No. 716,968
1 Claim. (Cl. 230—127)



In a centrifugal air compressor, in combination with a rotor delivering compressed air through an annular opening in one face near its periphery, a stator receiving compressed air from said rotor and comprising a cylindrical sheet-metal shell concentrically located with reference to the axis of the rotor and having a diameter which is about equal to the outside diameter of the rotor, a plurality of curved sheet-metal vanes located in cooperative relation to said annular opening in the rotor and radially arranged within said shell and with the outer edges of said vanes in contact with said shell, a sheet-metal shroud in contact with the inner edges of said vanes, and an annular plate having an outside diameter less than the diameter of said shell and located at a right angle to and concentric with the axis of the rotor and in cooperative relation to the edges of said vanes; whereby the direction and velocity of the compressed air delivered by said rotor to the stator are changed and the compressed air is directed into two paths, one of which is parallel to the axis of the rotor and extends through the annular opening between said shell and the outer edge of said plate, and the other of which is transverse to and toward said axis and extends between said shroud and plate.

2,462,519
HAIR CUTTING COMB
Warren M. Mansfield, Glendale, Calif., assignor to Sta-Neet Corporation, Los Angeles, Calif., a corporation of California
Application January 27, 1947, Serial No. 724,607
4 Claims. (Cl. 30—30)



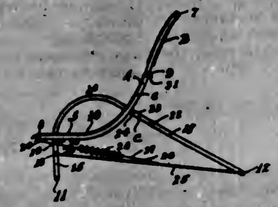
4. A hair cutting comb which comprises: an elongated generally planar comb body provided with a plurality of comb teeth along one edge thereof and an elongated recess in one face in spaced relation to the tips of said teeth throughout a portion of the length of said body; first shoulder means provided by said body to define the longitudinal ends of said recess; second shoulder means defined by said body at the longitudinal ends of said recess to define a pair of longitudinally spaced opposing slots extending generally parallel to the plane of said body transverse to the length thereof, and said recess having a back wall of outwardly convex curvature in the direction of the length of said body between the position of said slots, and being adapted to receive a thin metal blade of the double-edge "safety-razor" type with its cutting edges disposed generally parallel to the length of said body; and a resiliently deformable slide member of generally planar form adapted to be slidably disposed within said recess in superimposition upon such a blade, with the longitudinal ends of said member disposed within said slots in sliding engagement with said first shoulder means and in frictional engagement with said second shoulder means, upon deformation of said member and the blade into curved shape consonant with the curvature of said back wall.

2,462,520
ROLLER WINDOW SCREEN
William Marbach, Chicago, Ill.
Application February 11, 1947, Serial No. 727,743
3 Claims. (Cl. 160—100)

1. In combination with a window and window sash a window screen comprising, a roller rotatably mounted transverse the window frame bottom, a window screen reeled on said roller and secured at one end to said sash, a plurality of radial arms carried by said roller, and a plurally perforated band secured to said sash and slidable adjacent said roller arms, said band perforations successively engaging said arms to rotate said roller with movement of said sash.

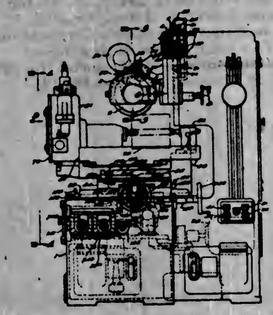
2,462,521
SPRING OSCILLATING CHAIR
Roscoe R. Marriett, Bingham Canyon, Utah
Application August 9, 1945, Serial No. 609,784
1 Claim. (Cl. 155—77)

A chair comprising an elongated rectangular framework having an inclined rear portion terminating in an upper arm portion; transverse braces spacing the arm portions apart; rollers on the two top transverse braces; chair seat having a back rest portion reversed slightly in curve, carried on the rollers for oscillation, said chair seat being adapted to be reversed and used as a reclining chair when desired; and a spring means attached to the rear lower end of the framework and to a



hook mounted on the underside of the chair seat to permit oscillation of the chair seat.

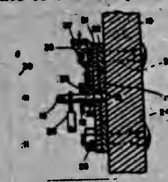
2,462,522
GRINDING MACHINE
James Martin, Ferndale, Mich., assignor to Michigan Tool Company, Detroit, Mich., a corporation of Delaware
Application December 15, 1945, Serial No. 635,267
8 Claims. (Cl. 51—123)



5. A grinding machine for grinding the flanks of the teeth of gear-like machine elements comprising a base, a grinding head mounted thereon, said head including a generally circular grinding wheel having a flat surface normal to its axis of rotation and means for driving same, a work holder mounted on said base, said work holder including centering means and a work supporting element for rotatably supporting a workpiece, automatic fluid actuated means for reciprocating said work holder to move a workpiece mounted therein in a path normal to its axis of rotation, means to effect reciprocatory partial rotation of said work supporting element in accordance with said reciprocating movement, including a driving element carried by said base and a coacting driving element carried by the work holder, the combined rotational and reciprocating movements serving to cause the flank of a tooth of the workpiece to progressively contact the surface of the grinding wheel along an involute path, common means for percisely limiting the magnitude of both of said reciprocatory movements, and means including a vertical pivot operatively connecting the work holder to the base for swinging movement about a vertical axis.

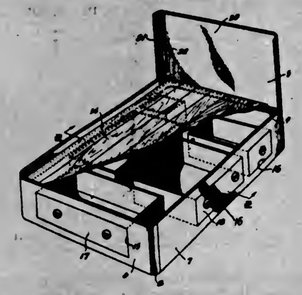
2,462,523
SAFETY HASP KEEPER
Thomas H. Mason, Peoria, Ill.
Application August 9, 1947, Serial No. 767,869
7 Claims. (Cl. 292—257)

6. An emergency release mechanism for door locks comprising a hasp adapted to be fastened to a door frame and a keeper assembly, including a mounting plate, a keeper element secured to said plate and adapted to extend through said hasp and receive a lock to secure the door in normally locked position, means for removably fastening said plate to the door, and a knife mem-



ber carried by said fastening means for cutting said keeper element to release it from the hasp and allow opening of the door without requiring removal of the lock, said keeper element being formed of a material that will shear when the knife member is struck and driven against it.

2,462,524
BEDSTEAD
Minnie Mattedi, Denver, Colo.
Application October 22, 1946, Serial No. 704,949
4 Claims. (Cl. 5—308)



1. A bed comprising a head board, a foot board and a pair of side boards, rails secured to the inner surfaces of each of said boards, said head and foot boards being curved at their ends to extend in the vertical plane of the side boards and in end-to-end engagement therewith, interlocking means between the rails of the head and foot boards with the rails of the side boards, and a dust-proof platform supported on said rails and adapted to support a bed spring and mattress thereon.

2,462,525
WINDOW SHADE BRACKET
Guy McCormick, Jr., Newport News, Va.
Application August 24, 1945, Serial No. 612,417
1 Claim. (Cl. 248—271)

A shade roller bracket, comprising a flat vertical elongated plate, said plate having a main horizontal opening near its top forming reduced vertical strips, said plate being provided near its top and within the main opening with spaced vertical lugs, the lower ends of the lugs terminating near the longitudinal center of the main opening, the lugs and reduced strips defining vertical slots open at their lower ends, the plate being provided at its bottom edge with spaced vertical lugs forming

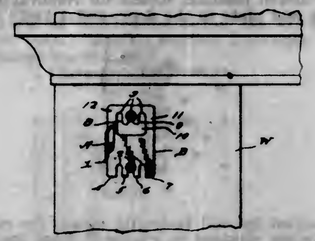
vertical slots having their lower ends open and passing through the bottom edge, the lower lugs being longer than the upper lugs, the upper and lower slots being arranged in vertical pairs, the

layer on the other surface consisting of a water-soluble, alkaline developer-insoluble macromolecular acetal of a hydroxyl polymer having a plurality of recurring intralinear —CH₂—CHOH— groups with an aldehyde containing a solubilizing

combustion chamber, said upper casing section including a top wall and a connecting downwardly extending first skirt having an opening in the front portion thereof, said lower casing section including a bottom wall having a de-

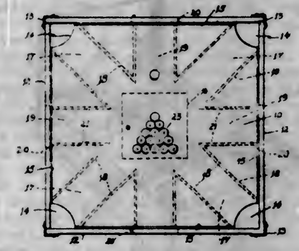
secured to said resilient contact, said actuating means comprising rods rigidly secured to said resilient arms and insulating handles secured to said rods.

vertical slots having their lower ends open and passing through the bottom edge, the lower lugs being longer than the upper lugs, the upper and lower slots being arranged in vertical pairs, the



slots in each vertical pair being in vertical alignment, and a laterally extending arm secured to the vertical edge of the plate and having means to engage with the shade roller.

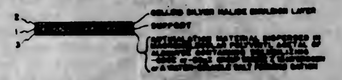
2,462,526
POOL GAME TABLE
Samuel H. McNair, Philadelphia, Pa.
Application April 2, 1946, Serial No. 659,069
1 Claim. (Cl. 273—3)



A table for pool games comprising a flat, rectangular top having cut-away corners to provide ball pockets, a flat bottom spaced from said top and substantially parallel thereto, four sides extending from said bottom above said top to provide a ball rail around the top, said sides being substantially perpendicular to said top and said bottom and each having an opening therein substantially at its mid-length location adjacent said bottom, a fixed rectangular stage disposed between said top and bottom substantially parallel thereto and substantially equally spaced from each of said sides, a respective inclined passageway leading from each cut-away corner of said top to said stage and a respective inclined passageway leading from said stage to each of said side openings.

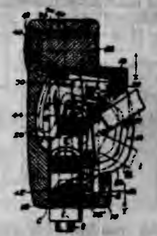
2,462,527
PHOTOGRAPHIC ANTIHALATION ELEMENTS
David Malcolm McQueen, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application January 27, 1947, Serial No. 724,711
5 Claims. (Cl. 95—8)

1. A photographic element comprising a support bearing a light sensitive silver halide emulsion layer on one surface and an antihalation layer on the other surface consisting of a water-soluble, alkaline developer-insoluble macromolecular acetal of a hydroxyl polymer having a plurality of recurring intralinear —CH₂—CHOH— groups with an aldehyde containing a solubilizing group taken from the class consisting of—COOZ and SO_3Z where Z is a member taken from the



group consisting of hydrogen and a water-soluble salt forming cation, which is otherwise unsubstituted said acetal layer having uniformly dispersed there through finely divided antihalation material which is absorptive of the rays to which the emulsion layer is sensitive, said acetal being colorless and free from color former nuclei.

2,462,528
AUTOMATIC LOCK SLIDER FOR SLIDE FASTENERS
William Mikulas, West Brighton, Staten Island, N. Y., and Lester L. Jones, Oradell, N. J., assignors to Conmar Products Corporation, Newark, N. J., a corporation of New Jersey
Application March 3, 1945, Serial No. 580,750
19 Claims. (Cl. 24—205.14)

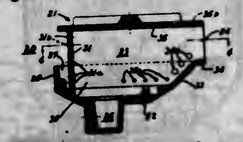


1. An automatic lock slider for slide fasteners comprising a slider having a slider channel for the slide fastener stringers and a locking member mounted on the slider, said locking member consisting of a two-armed lever fulcrumed on the slider and having both of its arms projecting into the slider channel, one arm of the lever having a locking tooth and the other arm having a point of lever application, the locking tooth and point of lever application extending into the channel on opposite sides or faces of the stringers in said channel, the fastener elements on said stringers engaging the point of lever application causing the locking lever to rock on its fulcrum and move the locking tooth into engagement with another fastener element on the stringers and thus automatically lock the slider, and means on said lever operative for rocking the lever in its opposite direction to disengage the locking tooth and unlock the slider.

2,462,529
HORIZONTAL OIL BURNER OF THE TRAY TYPE
Clarence A. Miller, Petaluma, Calif., assignor to Kresky Mfg. Co., Inc., Petaluma, Calif., a corporation of California
Application July 23, 1945, Serial No. 606,559
4 Claims. (Cl. 158—91)

1. A burner comprising upper and lower casing sections secured together and defining a

combustion chamber, said upper casing section including a top wall and a connecting downwardly extending first skirt having an opening in the front portion thereof, said lower casing section including a bottom wall having a depression formed therein defining a liquid fuel reservoir disposed below and directly communicating with said combustion chamber and an upwardly sloping front wall and a connecting upwardly extending second skirt, said first skirt extending above and having its lower part arranged within said second skirt in spaced relation thereto, the front edge of said top wall and the front edges of said first skirt adjacent to the

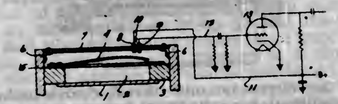


opening in the front portion thereof cooperating with the front edge of said front wall to define a forwardly directed flame outlet throat, means for supplying liquid fuel to said reservoir, said first skirt having a number of air inlet openings formed therein and disposed above and below the upper edge of said second skirt, and means for directing air from the exterior of said casing sections through said openings and across said reservoir, whereby vaporized fuel from said reservoir and flames of burning fuel in said combustion chamber are projected forwardly through said flame throat to the exterior of said casing sections.

2,462,530
LIGHT BULB STEM AND SOCKET
Joseph B. Miller, Natchez, Miss., assignor of fifty per cent to Katherine G. Miller, Natchez, Miss.
Application September 4, 1947, Serial No. 772,193
2 Claims. (Cl. 173—328)

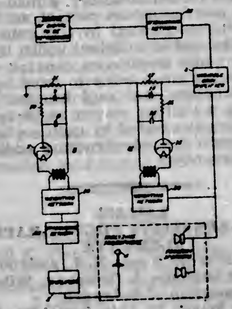
1. A socket for a lamp having a grooved stem extending therefrom comprising a housing composed of detachable sections and having an opening at the top of one of said sections, an insulating partition in said housing, a sleeve having aligned apertures secured to said partition and extending to and terminating at said opening, a resilient contact secured to said partition and positioned within said sleeve, resilient arms secured to said sleeve, means exterior of said housing for actuating said arms and latch keepers on said arms extending through said apertures engageable with the groove in a lamp stem, a conductor secured to said sleeve and a conductor secured to said resilient contact, said actuating means comprising rods rigidly secured to said resilient arms and insulating handles secured to said rods.

2,462,531
MUSICAL VIBRATION TRANSLATING UNIT
Burton Minshall, Brattleboro, Vt.
Application May 22, 1945, Serial No. 595,239
12 Claims. (Cl. 84—1.14)



1. A unit for a musical instrument for translating mechanical vibrations into electrical oscillations, comprising stationary electrodes mutually forming an electrical capacity, an electrical circuit including said capacity and including means for charging the capacity, a vibratory reed free of conductive connection with said circuit and positioned with respect to said electrodes to vibrate within the electrostatic field of said capacity, and means for vibrating said reed.

2,462,532
SOUND SYSTEM WHICH COMPENSATES FOR VARIABLE NOISE LEVELS
Frank A. Morris, Rochester, N. Y., assignor to Stromberg-Carlson Company, a corporation of New York
Application June 13, 1947, Serial No. 754,473
7 Claims. (Cl. 179—1)



1. In a sound reproducing system of the type comprising a source of sound to be reproduced, at least one sound reproducing means, and means arranged for automatically controlling the volume of reproduced sound, the last mentioned means comprising means for developing a first control quantity representative of the combined noise and reproduced sound level in the vicinity of said reproducing means, means for establishing a second control quantity representative only of the sound to be reproduced, and means for combining said quantities for control purposes, said last mentioned means comprising resistance means connected between a source of reference potential and said volume control means, said first quantity being impressed across one portion of said resistance means and said second quantity being impressed across another portion of said resistance means.

2,462,533
ELECTRIC THRUST DEVICE
John J. Merrihue, Boston, Mass., assignor of

2,462,535
REFRIGERATING APPARATUS WITH CHARGING PLUG

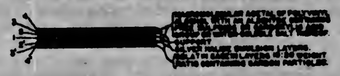
verse direction, said tongues being provided with longitudinal grooves, and the means between the said channels and tongues for preventing sepa-

2,462,538
THERMAL INSULATING BUILDING MATERIAL AND ITS METHOD OF MANUFACTURE

2,462,533
ELECTRIC THRUST DEVICE
John J. Moynihan, Boston, Mass., assignor of one-half to Joseph B. Brennan, Bratenahl, Ohio
Application August 12, 1945, Serial No. 610,580
5 Claims. (172—280)

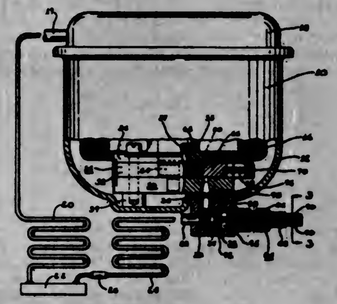
5. An electrodynamic thrust device including in combination a cylindrical ferromagnetic armature having a plurality of grooves in the surface thereof, a continuous single-conductor open-circuited winding providing a plurality of turns within each such groove and anchored to prevent motion of said winding with respect to said armature, an annular contact member associated with each such groove, each of said contact members, except those at the ends of the armature, being connected to the windings in two adjacent grooves and the members at the ends of the armature being connected to the windings in the adjacent end grooves, and said members having smooth external surfaces of a diameter greater than the diameter of the armature, a field structure comprising a plurality of annular elements each including an annular pole, said annular poles together forming a discontinuous cylindrical pole structure concentric with said armature, said elements also providing an annular magnetic return structure outside of said pole, and a radially extending web connecting each said pole with said return structure, a field coil associated with each adjacent pair of said annular elements, brushes located in the gaps between adjacent poles and of sufficient width in an axial direction to make continuous contact with said members, said brushes being in fixed relation to said pole structure and said brushes being so connected to a current source as to render the individual thrusts exerted by each section of the armature within the pole structure additive with respect to each other.

2,462,534
LIGHT-SENSITIVE PHOTOGRAPHIC ELEMENTS
Otis Willard Murray, Fords, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 29, 1946, Serial No. 658,224
2 Claims. (Cl. 95—8)



1. A photographic element comprising a base, a light-sensitive emulsion layer, an outer antihalation layer disposed on each side of said base composed of casein and gelatin in the proportion of 10 to 20 parts of the former per part of the latter, having intimately and uniformly dispersed therethrough finely divided carbon particles and a water-soluble acetal of a vinyl alcohol polymer containing a group taken from the class consisting of free sulfonic acid groups, free carboxylic acid groups, and their water-soluble salts interposed between said emulsion layer and antihalation layer.

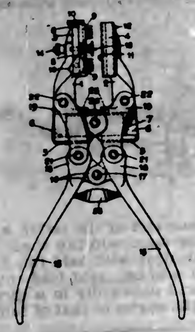
2,462,535
REFRIGERATING APPARATUS WITH CHARGING PLUG
John M. Murphy, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application July 3, 1946, Serial No. 681,249
2 Claims. (Cl. 62—115)



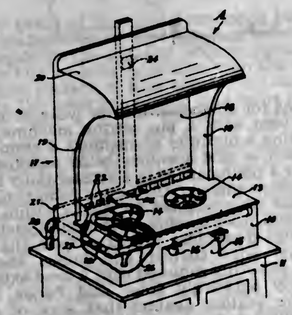
1. In a refrigerating system, an evaporator, a refrigerant translating device and conduits connecting said device and said evaporator in closed circuit relationship, said refrigerant translating device including a casing enclosing a compressor, a motor for operating said compressor, said casing having an inlet communicating with said compressor and an outlet, a plug projecting through said casing and being accessible from outside of said casing, said plug comprising a first tubular element and a second tubular element concentrically arranged within said first tubular element in spaced relationship thereto and forming therewith two separate passages, said first tubular element having externally formed threads thereon, a disc for closing both of said passages, and means holding said disc confined therein and adapted to seal the same against the outer end of said plug, said means comprising an internally threaded cup-shaped cap located on said externally formed threads on said first named tubular element of said plug and having a passageway formed in the side wall thereof arranged so as to communicate with both of said separate passages upon partial removal of said cap from said plug.

2,462,536
PARALLEL JAW PLIERS
Arthur John Muter, London, England
Application February 2, 1945, Serial No. 575,822
In Great Britain November 2, 1943
2 Claims. (Cl. 81—46)

2. Parallel jaw tools comprising in combination a pair of handles pivoted together, each handle being in the form of a two-armed lever with long arms and short arms, two pairs of intermediate links also pivoted together as two-armed levers and which are pivoted at adjacent ends to the short arms of the handles, L-shaped jaws having uprights to the lower end of which the other ends of the said links are pivoted, each horizontal part of each jaw having a channel and a tongue which engage and receive complementary parts on the horizontal part of the other jaw, interengaging means between said channels, and tongues for preventing separation of the interengaging parts of the jaws in a transverse direction, said tongues being provided with longitudinal grooves, and the means between the said channels and tongues for preventing separation of the interengaging parts of the jaws in a transverse direction comprise members projecting into the said grooves.



2,462,537
SAFETY HOUSING FOR GAS BURNER GRILLS
Joseph Mykiatiuk, Toronto, Ontario, Canada
Application May 1, 1946, Serial No. 666,337
3 Claims. (Cl. 126—299)

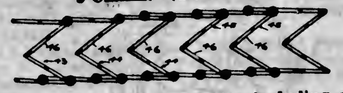


1. A safety housing for gas grills comprising a base embodying an open bottomed grill encasing compartment, a top plate therefor having orifices designed to register with the burners of a gas grill, a superstructure rising from the compartment embodying a back plate and terminating in a forwardly and downwardly curved hood above said orifices, said back plate being formed with a plurality of orifices below the level of the top plate, a manifold on the back plate with which said orifices communicate, and a flue on the back plate communicating with the manifold, the upper portion of said back plate being formed with at least one gas discharge orifice communicating with said flue, whereby gases generated by the use of the grill are induced to flow through the manifold to the flue and from the hood to the flue.

2,462,538
THERMAL INSULATING BUILDING MATERIAL AND ITS METHOD OF MANUFACTURE
Joseph S. Nagel, Santa Ana, Calif.
No Drawing. Application December 5, 1944, Serial No. 566,780
9 Claims. (Cl. 106—75)

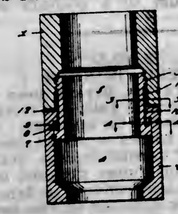
1. The method that includes, forming a uniform mixture of solid light weight porous aggregate particles, a relatively small proportion of a solution of a water soluble alkali metal silicate, and an alkali earth metal compound reactive with said silicate to convert same to an insoluble silicate, dehydrating said mixture to a degree such that the mixture will assume pelletised form upon agitation, agitating the mixture, compressing the dehydrated mixture, and heating the compressed mixture to convert it to a hard integrated mass of high compression strength.

2,462,539
WIRE SPRING STRUCTURE FOR SEAT AND BACK CONSTRUCTIONS
William H. Neely, Cleveland, and Svend G. Blumensaadt, Beachwood Village, Ohio, assignors to The Universal Wire Spring Company, Cleveland, Ohio, a corporation of Ohio
Application April 13, 1945, Serial No. 588,146
5 Claims. (Cl. 155—179)



1. A wire spring construction including a plurality of sinuously corrugated wire springs having substantially parallel top and bottom portions and inclined spacing and supporting portions connected with said top and bottom portions, said springs being assembled in rows, and some of the springs of said rows having their parallel portions overlapping each other a full loop of their corrugations and the overlapping portions secured to each other at spaced points to provide a spring structure with stiffened parallel portions yieldingly spaced from each other by the spacing and supporting members of said springs.

2,462,540
RELEASE COUPLING
Carroll N. Nicodemus and Albert E. Gregg, Ashland, Ohio
Application July 26, 1946, Serial No. 686,358
2 Claims. (Cl. 285—168)



1. A release coupling for attaching sections of pipe together, comprising a pair of tubular sections arranged in end-to-end relation with respect to each other, one of said tubular sections having an annular reduced part and an annular shoulder surrounding said reduced part, said shoulder being provided with sockets on its un-

der-side thereof, the other of said tubular sections being provided with an annular enlargement, a slidable sleeve interposed within said pair of sections, said sleeve including an annular

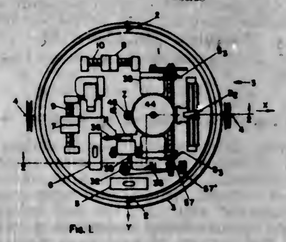
off drive mechanism for said gearing operatively engaged by the tractor, a feed pit immediately beneath and in line with said grinding mecha-

valve stems, said member having a spring-receiving seat between its valve stem engaging

machines, each machine being capable of adjustment to carry a varying load ranging between a predetermined minimum and maximum capacity for the machine, comprising controlling

der-side thereof, the other of said tubular sections being provided with an annular enlargement, a slidable sleeve interposed within said pair of sections, said sleeve including an annular flange adjacent one end thereof and having securing means on its opposite end, said sections and sleeve being so arranged that the annular enlargement of said other section embraces the annular reduced part of said one section and the securing means on the opposite end of said sleeve, said flange being provided with diametrically-opposed lugs projecting vertically therefrom for engagement with said sockets to secure the sleeve against rotation, and means on the annular enlargement of said other section engaging the securing means on said sleeve for connecting the sections together.

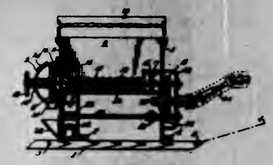
2,462,541
ERECTING SYSTEM FOR GYROSCOPES
Carl L. Norden, New York, N. Y., assignor, by mesne assignments, to The Norden Laboratories Corporation, White Plains, N. Y., a corporation of Connecticut
Application October 17, 1945, Serial No. 622,837
9 Claims. (Cl. 74—5.44)



1. An erecting system for gyroscopes including in combination a gyroscope housing, a gyroscope rotor having a vertical spin axis positioned in said housing, means for mounting said housing for rotation about a longitudinal axis and a transverse axis, an inverted pendulum mounted upon said housing for rotation about a fixed axis, means for creating torque about an axis extending at right angles to said spin axis and at right angles to the axis of rotation of said inverted pendulum, and means responsive to said inverted pendulum for actuating said torque creating means to precess the gyroscope in a direction to bring said inverted pendulum to a position of unstable equilibrium.

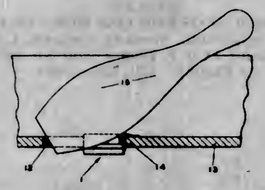
2,462,542
FEED GRINDER
Paul Paetow, Bryant, Iowa
Application March 21, 1946, Serial No. 655,941
1 Claim. (Cl. 241—163)

In a portable tractor-actuated feed grinder, runners, a hopper carried thereby, grain-feeding mechanism in said hopper disposed in a direction common to said runners, a fan shaft beneath said hopper disposed in the common direction of said runners and feeding mechanism and in the plane of said feeding mechanism, grinding mechanism at one end of said feeding mechanism operatively engaged thereby and in the plane thereof and of said fan shaft, drive gearing connecting said feeding mechanism and fan shaft and in a common plane therewith, take-off drive mechanism for said gearing operatively engaged by the tractor, a feed pit immediately beneath and in line with said grinding mechanism, a fan housing communicating with said feed pit in line therewith and with said fan shaft



and receiving one end of the latter, a fan within said fan housing upon said fan shaft, and a feed chute communicating with said fan housing and associated with said fan, said feed chute extending upwardly and outwardly in a direction substantially at right angles to that of said fan shaft.

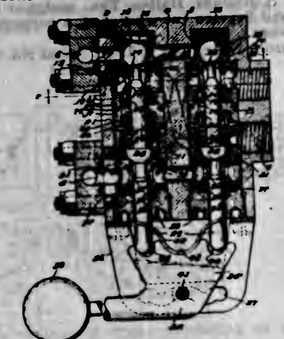
2,462,543
WEAR PLATE FOR PIN SETTING FRAMES
Richard F. Palmer, Hastings, Mich.
Application August 4, 1947, Serial No. 766,072
2 Claims. (Cl. 273—42)



1. Means for compensating for wear on bowling pins used with a pin setting machine, the latter having a plurality of openings therein, the wall of each of said openings being adapted for supporting a pin balanced in a substantially horizontal position thereon, the means comprising: a semicircular plate adapted for fitting within said opening, said plate having a horizontal member and a flange depending vertically from the radially inner edge thereof and joined thereto through a smoothly radiused rim; a bead extending radially outwardly from said flange and adapted for seating against that edge of said opening which is removed from said horizontal member.

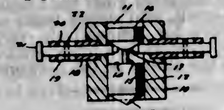
2,462,544
VALVE ACTUATING MEANS
Warde L. Parker, Los Angeles, Calif., assignor to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio
Original application June 3, 1942, Serial No. 445,615. Divided and this application July 12, 1945, Serial No. 604,610
6 Claims. (Cl. 74—471)

1. Means for selectively operating a pair of slidable valve stems each having a free end, including an actuating member formed with a pair of curved seats for movably receiving the free ends of the valve stems therein, means to mount the member for pivotal movement in opposite directions and for bodily movement to selectively position its seats with respect to the valve stems, said member having a spring-receiving seat between its valve stem engaging



seats, and a leaf spring in said spring-receiving seat.

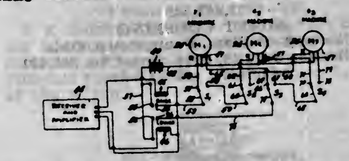
2,462,545
MODIFIED PLUG GAUGE
Paul A. Pomjanka, Owosso, Mich.
Application June 25, 1946, Serial No. 679,260
4 Claims. (Cl. 33—178)



3. In a gauge of the class described a housing, the circumferential surface whereof extends at right angles to the top and bottom surfaces, a centrally located bore extending from the top to the bottom surface, a plug slidably arranged in said bore, the lower end of said plug being shaped conically, and a screw threadedly extending through the circumferential wall of the housing and at right angles to the plug and adapted to secure the plug in any adjusted position in the bore, an upwardly extending stem on the plug, said stem being arranged coaxially with the plug, a second plug on the stem, said second plug having a conical lower end and being arranged coaxially with the first plug, the two conical plug ends having the same base angles, and a pair of diametrically opposed gauge pins, slidably arranged in the side wall of the housing at right angles to the plugs and to the screw, each of the two gauging pins having a frusto-concial inner end the base angles of these ends being equal to the complement of the base angles of the conical plug ends, and the gauging pins being adapted to contact the conical end of the second plug, the distance from the bottom plane of the housing to the common axis of the gauging pins being equal to the distance between the two base planes of the conical plug ends plus one half of the diameter of the inner end face of the frusto-conical end of the gauge pins.

2,462,546
ELECTRICAL CONTROL SYSTEM AND METHOD OF OPERATION
James W. Peeples, Dadeville, Ala.
Application September 19, 1945, Serial No. 617,257
9 Claims. (Cl. 290—4)

9. A method of operating an electric power plant having a plurality of electric generating machines, each machine being capable of adjustment to carry a varying load ranging between a predetermined minimum and maximum capacity for the machine, comprising controlling the adjustment of a first machine in either of two opposed directions respectively to increase or decrease the load carried thereby until said machine reaches either of said capacities, then

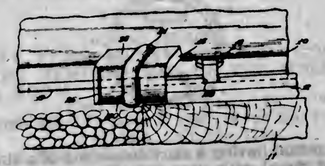


transferring the control to a succeeding machine to adjust the latter in the direction of adjustment of the first machine at the time of said transfer while maintaining the control of adjustment of the first machine in the opposite direction, and transferring the control of adjustment in said opposite direction to the succeeding machine after the latter has been adjusted in the first named direction.

2,462,547
DOUBLY ACTIVATED INFRARED PHOSPHORS AND METHODS OF PREPARING SAME
John J. Pitha, Jamaica, and Roland Ward, Brooklyn, N. Y., assignors to Polytechnic Institute of Brooklyn, Brooklyn, N. Y., a corporation of New York
No Drawing. Application August 8, 1945, Serial No. 609,714
5 Claims. (Cl. 252—301.4)

5. As a new composition of matter, an infrared phosphor consisting essentially of lanthanum oxy-sulfide and a double activator of the group consisting of europium coupled with a member of the group consisting of lead, bismuth, samarium, gadolinium and indium and of indium coupled with a member of the group consisting of lead, bismuth, copper and samarium, said double activators being present in activator proportions.

2,462,548
SINGLE FLANGE RAIL ANCHOR
Frederick A. Preston, Lake Forest, Ill., assignor, by mesne assignments, to Poor & Company, Chicago, Ill., a corporation of Delaware
Application February 27, 1947, Serial No. 731,250
5 Claims. (Cl. 238—323)



1. A rail anchor comprising an upper jaw and a lower jaw which together engage and grip the top and bottom surfaces of one base flange of the rail, the said lower jaw being positioned to extend transversely beneath the rail base at substantially right angles to the length of the rail and the said upper jaw being disposed at an angle to the lower jaw to extend over the top surface of the said base flange in a direction

diagonal to the length of the rail, and means defining a flat striking surface, the plane of

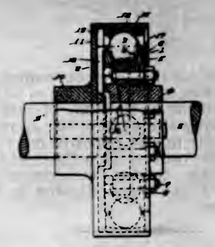
Hannah E. Rose, Grafton, Pa.

2,462,555
COPOLYMERS OF STYRENE AND 4,4'-DIVINYL-BIPHENYL

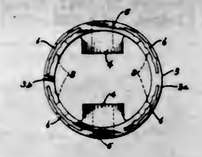
diagonal to the length of the rail, and means defining a flat striking surface, the plane of which extends at substantially right angles to the longitudinal center of the upper jaw, whereby the application of force is normally delivered to said striking surface in a direction aligned with the upper jaw.

2,462,549
SHAFT COUPLING
George E. Pulliam, Youngstown, Ohio
Application July 18, 1944, Serial No. 545,421
8 Claims. (Cl. 64—8)



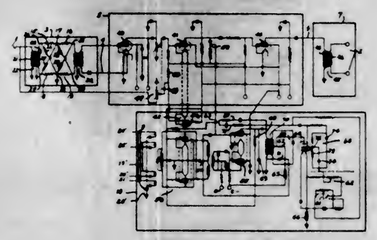
4. A coupling of the class described comprising male and female members respectively adapted for securement in axially spaced relation to the shafts to be coupled, a male member including a hub portion and a retainer ring detachably connected thereto having a series of substantially semi-spherical sockets in its periphery, the female member including a hub portion and a flange adapted to overhang and clear said ring when the members are in operative position and including a series of substantially rectangular slots extending axially of the coupling, substantially rectangular grooved retainer blocks slidably seated in said slots, and a series of balls interposed between said members and respectively engaging in said sockets and in the grooves in the blocks, the bottoms of said grooves conforming from end to end to arcs struck from the axis of the coupling.

2,462,550
PISTON
George C. Ramspeck, Chicago, Ill.
Application June 12, 1946, Serial No. 676,528
3 Claims. (Cl. 309—12)



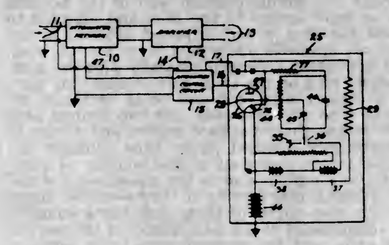
1. A piston having a skirt consisting of a single piece of metal with diametrically opposite wrist pin bearings and opposed sectors upon opposite sides of the diameter passing through said bearings, each sector having a plurality of expansion slots extending from the bottom of the piston to the top of the skirt and extending over the larger portion of the circumferential area of said sectors with passages extending from each slot to the interior of the piston, said slots being adapted for receiving expanding means.

2,462,551
AMPLITUDE CONTROL
Darwin S. Renner, Dallas, Tex., assignor to Geophysical Service Incorporated, a corporation of Delaware
Application November 5, 1942, Serial No. 464,607
1 Claim. (Cl. 178—44)



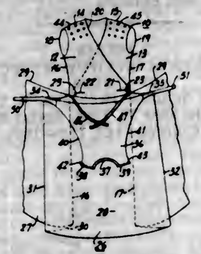
In an automatic gain control system for a vibratory event in a seismic amplifier the combination of, an attentuation network having input and output terminals, a plurality of resistors interconnecting said terminals, at least some of said resistors being filamentary and adapted to adjust attenuation by heating thereof, and means including a source of alternating current of a frequency widely displaced from the frequencies of the vibratory event, said source being connected to said resistors for conductively varying the heating of the resistors in a predetermined manner to control the output of the network.

2,462,552
INITIAL ATTENUATOR CONTROL
Darwin S. Renner, Dallas, Tex., assignor to Geophysical Service Incorporated, a corporation of Delaware
Application January 25, 1943, Serial No. 473,443
1 Claim. (Cl. 178—44)



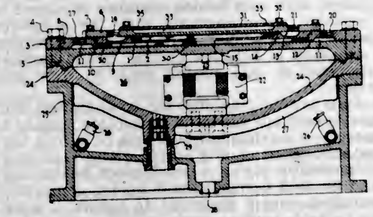
A seismic recording system comprising in combination, a signal channel, volume control means in said channel, initial attenuator control means operatively connected to said channel and control means for modifying the operation of said first mentioned means during the initial period of arrival of high amplitude input energy to the channel, said attenuator control means comprising a thermionic tube and means manually operable to preselect a plate current therethrough for modifying the operation of the volume control means, and means operable by a signal in the signal channel to bias the tube beyond cut off during the period of arrival of low amplitude input energy to the channel.

2,462,553
MATERNITY DRESS
Hannah E. Rose, Crafton, Pa.
Application November 15, 1946, Serial No. 710,192
2 Claims. (Cl. 2—76)



1. A maternity dress consisting of a circumferentially continuous lower body covering skirt loosely fitting the body and provided with vertical pleats folded and retained to the back, a waist having upper body covering portions including a back panel and overlapping front flaps with their lower edges substantially at the waistline, the back panel of said waist being attached to the skirt back centrally thereof, means to adjustably draw and retain the back portion of the skirt at the waistline to fit the body, a bib attached to the skirt front between the pleat forming portions, and means to adjustably retain the bib under or over the waist flaps adjacent the shoulder of the waist to drop the front portion of the skirt upon increase of girth and maintain an even skirt hem.

2,462,554
APPARATUS FOR SONIC PULVERIZATION AND DISPERSION OF MATERIALS
Thomas Robinson, New York, N. Y., assignor to Lancaster Processes, Inc., New York, N. Y., a corporation of New York
Application August 23, 1944, Serial No. 550,728
7 Claims. (Cl. 241—153)

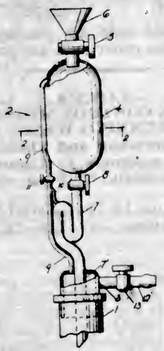


1. Apparatus for treating fluent material, which comprises not less than three superposed diaphragms united at their peripheries and having central portions unconnected and closely spaced from one another to form a plurality of superposed chambers, at least one of said diaphragms being apertured to provide communication between successive chambers, a layer of impact elements loosely confined, between said diaphragms, means for fixedly supporting the peripheries of said diaphragms, means for vibrating one of said diaphragms and thereby imparting vibrational motion to said elements and other diaphragms, and connections for passing said fluent material successively through said communicating chambers.

2,462,555
COPOLYMERS OF STYRENE AND 4,4'-DIVINYL-BIPHENYL
Fritz Rosenthal, Crescent Park, Bellmawr, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application November 24, 1945, Serial No. 630,684
8 Claims. (Cl. 260—86)

1. A resinous copolymer composition comprising the product of copolymerization of a mass comprising styrene and an amount of 4,4'-divinylbiphenyl equal to from 1 to 5 percent by weight of the styrene.

2,462,556
DROPPING FUNNEL
Walter Rosenthal, New York, N. Y.
Application August 21, 1947, Serial No. 769,805
1 Claim. (Cl. 23—252)



A continuous feeder funnel for controlled closed vessel chemical operations in a reactor chamber, comprising a double bend or N-shaped conduit to said reactor chamber arranged at the bottom of the funnel and provided with a valve closure; a bleed line connection between the upper portion of the feeder funnel and the reactor chamber, provided with a valve closure; and a bleed line connection by a second conduit leading from the first bleed line to the upper portion of the N-shaped bend.

2,462,557
HEAT PUMP MEANS FOR CONTROLLING THE TEMPERATURE OF THE WALLS OF A ROOM
Carl M. Santee, Dixon, Ill.
Application October 8, 1947, Serial No. 778,702
3 Claims. (Cl. 62—129)

3. A heat pump for controlling the temperature of a space, comprising an enclosure for said space including a wall formed with spaced internal, external and intermediate panels spaced apart to form parallel internal and external vertical air passages, said internal and external panels being of material of relatively good heat conducting properties and said intermediate panel being of heat insulating material, said air passages communicating with each other at their upper and lower ends, and a heat pump

mechanism comprising separate heat exchangers in said air passages arranged to function as a

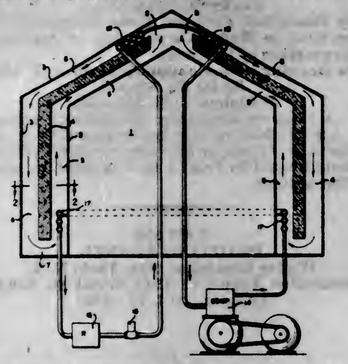
cut off fluid-pressure from said source of supply to said fluid-actuated operating device, the other of said controllers being responsive to fluid-pressure in said fluid-actuated operating device and

ond friction-drive band is operated to reset said carriage.

15. In a sewing machine, the combination of a base-plate having a vertical aperture therein; a

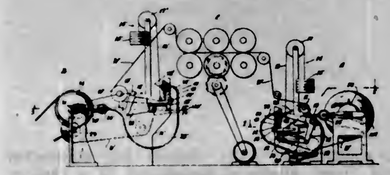
ranged in a path of predetermined configuration, a transformer having a main circuit connected thereto and a secondary circuit, a portion of said secondary circuit including a bus bar comprising segments extending in the direction of

mechanism comprising separate heat exchangers in said air passages arranged to function as a



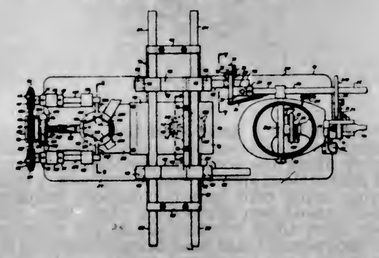
condenser in one said air passage and as an evaporator in the other said air passage.

2,462,558
TENSION CONTROL MEANS FOR RUNNING WEBS
Joseph S. Scheuermann and Thomas N. Carter, Chicago, Ill., assignors to Cameron Machine Company, Brooklyn, N. Y., a corporation of New York
Application June 15, 1944, Serial No. 540,444
4 Claims. (Cl. 242—75)



1. In a machine employing tension control for a tensioned running web of flexible material, in which machine a variable speed-control device is subjected to a progressively varying load of wound web material and in which the effectiveness of said speed-control device is varied by a movement of traverse, as well as by reciprocations, of a reciprocatory carriage having a roll that engages a bight in said running web, and in which both the movement of traverse and the reciprocations of the carriage are controlled by said web under tension acting on said roll and by a power device for exerting a force on the carriage in opposition to that exerted by the web on said roll, means to vary the effectiveness of said speed-control device in response to a progressive change, as well as to fluctuations, in tension of the web including: a fluid-actuated operating device connected to control the speed-control device, a duct leading from a source of supply of fluid under pressure to said fluid-actuated operating device, valve-mechanism interposed in said duct to control the passage of fluid from the source of supply to the fluid-actuated operating device or from the fluid-actuated operating device to an exhaust, two controllers for said valve-mechanism acting in opposition to each other, and means to operate one of said controllers in response to movements of said carriage and to the action of the other controller to admit or cut off fluid-pressure from said source of supply to said fluid-actuated operating device, the other of said controllers being responsive to fluid-pressure in said fluid-actuated operating device and to the action of the first-mentioned controller to open or close said exhaust.

2,462,559
AUTOMATIC CONTOUR-STITCHING MACHINE
Saul Schiller, Brooklyn, N. Y.
Application October 29, 1946, Serial No. 706,456
15 Claims. (Cl. 112—102)

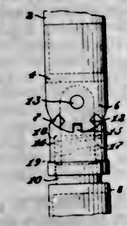


6. In a sewing machine, the combination with a base; a carriage having a rack-plate; means to support said carriage on said base to permit universal movement of said carriage and rack-plate in a horizontal plane; a work-piece holder supported by said carriage, said holder comprising clamping-members arranged to secure a work-piece to said holder; drive-means arranged to move said carriage through a sewing cycle, said drive-means comprising a shuttle-shaft, a pinion-member arranged to cooperatively engage the rack-plate of said carriage, and a friction-drive band cooperatively associated with said shuttle-shaft arranged to transmit step-by-step rotary motion to said pinion-member; a brake-band arranged to engage said pinion-member to hold the latter stationary between successive steps; and a second friction-drive band in engagement with said pinion-member arranged to be actuated simultaneously with the actuation of said work-piece clamping-members to reverse the direction of rotation of said pinion-member at the end of said sewing cycle to reset said carriage.

9. In a sewing machine, the combination with a base; a carriage having a rack-plate; means to support said carriage on said base to permit universal movement of said carriage and rack-plate in a horizontal plane; a work-piece holder supported by said carriage, said holder comprising clamping-members arranged to secure a work-piece to said holder; drive-means arranged to move said carriage through a sewing cycle, said drive-means comprising a friction-drive band constructed and arranged to transmit step-by-step movement to said carriage; a brake-band cooperatively associated with said drive-means to hold said carriage stationary between successive steps; a second friction-drive band cooperatively associated with said drive-means to reverse the direction of movement of said carriage at the end of said sewing cycle; operating-means connected to said clamping-members and said second friction-drive band to simultaneously clamp a work-piece to said holder and reset said carriage prior to the start of the next sewing cycle; and means arranged to automatically disassociate said brake-band from said drive-means when said second friction-drive band is operated to reset said carriage.

15. In a sewing machine, the combination of a base-plate having a vertical aperture therein; a pair of spaced-parallel guide-rods; means arranged to support said guide-rods in a horizontal plane above the horizontal plane of said base-plate for longitudinal movement transversely to the longitudinal axis of said base-plate; a pair of spaced-parallel bearing-brackets secured to said guide-rods adjacent opposite ends thereof respectively, each bracket having a depending hanger provided with a bearing-aperture, the longitudinal axis of which extends substantially parallel to the longitudinal axis of the base-plate; a rack-plate; means to support said rack-plate in a horizontal plane immediately above the horizontal plane of said base-plate comprising a second pair of spaced-parallel guide-rods, each of said second pair of guide-rods being slidably supported in one of the said bearing-apertures of said brackets for longitudinal movement substantially at right angles to the said first pair of guide-rods; a member arranged to secure said rack-plate to the said second pair of guide-rods; and a pinion arranged to project upwardly through the aperture of said base-plate and to engage said rack-plate to transmit substantially universal movement thereto in a horizontal plane.

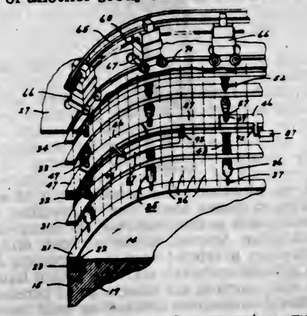
2,462,560
TILTABLE UMBRELLA
Edward Schmidt, Rutherford, N. J.
Application October 28, 1947, Serial No. 782,486
2 Claims. (Cl. 135—46)



1. A tiltable umbrella comprising a staff divided into upper and lower sections, a bifurcated member and a tongued member fitting on the opposed ends of the staff sections, means pivotally interconnecting said members to permit the upper staff section to incline relatively to the lower staff section, a series of sockets on the bifurcated member directed toward the tongued member, a sleeve fitting slidably on the tongued member and movable toward and from the sockets, a tooth on the sleeve, said tooth being opposed to and selectively engageable with the sockets so as positively to lock the upper staff section in adjusted position, and resilient means urging the sleeve toward the bifurcated member to hold the tooth in one of said sockets.

2,462,561
WELDING APPARATUS
Siebert Schneider, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application September 8, 1947, Serial No. 772,704
10 Claims. (Cl. 219—4)

1. In an electric welding machine, the combination of a single column of electrodes stationed in spaced relation to one another and arranged in a path of predetermined configuration, a transformer having a main circuit connected thereto and a secondary circuit, a portion of said secondary circuit including a bus bar comprising segments extending in the direction of said path of predetermined configuration of said single column of electrodes, a first segment of said bus bar being insulated from a second segment thereof, said single column of electrodes being normally out of connection with said bus bar segments and divided into groups, the electrodes of one group being adapted for connection to said first segment and the electrodes of another group thereof being adapted for



connection to said second segment, a guide extending parallel to the direction of said path of said single column of electrodes, a pair of elements associated with said guide and spaced a predetermined distance from one another therealong, means for moving said elements in unison along said guide and for connecting an electrode of each of said groups thereof with its respective bus bar segment sequentially throughout the length of said single column of electrodes, and means for causing energization and deenergization of the electrodes during a portion of their connection with said bus bar segments whereby each individual electrode of said single column thereof makes one of a series of welds.

2,462,562
LAMP DEVICE
John Schwab, Winnipeg, Manitoba, Canada
Application February 23, 1945, Serial No. 579,385
2 Claims. (Cl. 240—10)

1. A decorative lamp holder comprising a transparent disc member having its peripheral edge beveled, there being an opening centrally disposed and extending through said member, and a lamp holding means arranged in superposed relation with respect to said opening and mounted on said member, said means embodying a flat annular portion provided with a centrally disposed lamp-receiving opening, disc-engaging means extending from said flat annular portion and a plurality of prong elements disposed about

the edge of said portion adjacent the lamp-receiving opening and projecting rearwardly so as to provide a socket for resiliently supporting the rear portion of the lamp, whereby said beveled periphery will be illuminated by light transmitted from said lamp through said disc mem-

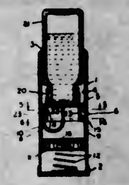
to the inner sides of said band, a shaft extending into said drum, a hub on said shaft, pivotal connections between said hub and the inner ends of said arms, spring means carried by said hub and bearing against each of said arms for bias-

enveloping said skirt portion and in resilient contact with said skirt portion at a position below the upper end of said piston ring member; an in-

surface of said target in proportion to the charge image thereon, and an electrode for accelerating the remainder of the electrons from said auxiliary source to bombard said screen.

the edge of said portion adjacent the lamp-receiving opening and projecting rearwardly so as to provide a socket for resiliently supporting the rear portion of the lamp, whereby said beveled periphery will be illuminated by light transmitted from said lamp through said disc member.

2,462,563
PORTABLE ATOMIZER
Rome C. Seyforth, Shelby, Ohio
Application July 31, 1945, Serial No. 608,057
3 Claims. (Cl. 299—68)



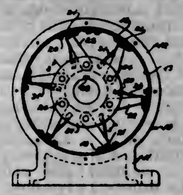
3. In an atomizer, the combination of a casing having a closed lower end, a member reciprocable in said casing adapted to compress air in the portion thereof adjacent such end, said casing having a lateral opening exposing a side portion of said member and the latter having a vent in such portion for discharge of compressed air, a liquid container carried by said member, the latter being provided with a passage having its ends below the level of the liquid in said container and respectively opening within and without said container and providing the sole means of communication between the interior and exterior of the latter, the outer end of such passage being located transversely adjacent to such vent, a gasket in said casing above the outer end of such passage, and a compression spring interposed between said member and casing, said spring yieldably urging said member upwardly to effect sealing engagement between the outer end of such passage and said gasket.

2,462,564
SEPARATION OF POLYMERS
John R. Skeen, Philadelphia, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application February 9, 1945, Serial No. 577,144
6 Claims. (Cl. 260—96)

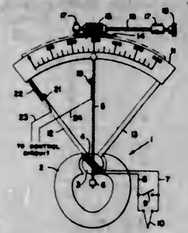
6. Method of separating polymers comprising chain-like molecules of varying molecular weight into fractions of different average molecular weights which comprises forming a solution of said polymers and a saturated hydrocarbon solvent, percolating the solution through a bed of silica gel to selectively adsorb a portion of the polymers while leaving in solution polymers of higher average molecular weight than those adsorbed and separating from the adsorbent the treated solution containing the polymers of higher average molecular weight.

2,462,565
ONE-WAY EXPANSIBLE BAND BRAKE
Franklin N. Smith, Aurora, Ill.
Application August 13, 1946, Serial No. 690,155
2 Claims. (Cl. 188—77)

1. In a braking device, the combination of a brake drum, an expansible and contractible band therein, a plurality of arms pivotally connected to the inner sides of said band, a shaft extending into said drum, a hub on said shaft, pivotal connections between said hub and the inner ends of said arms, spring means carried by said hub and bearing against each of said arms for biasing said band toward expanded position, and means limiting expansion and contraction of said band, said last-mentioned means comprising a slotted tongue secured to one end of said band and extending beneath the opposite end of said band, and bolts extending into said slot.



2,462,566
CONTROL INSTRUMENT
Edgar M. Smith, Trenton, N. J., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application October 18, 1946, Serial No. 704,136
5 Claims. (Cl. 200—56)

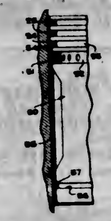


5. In a control instrument, a pointer movable from a zero position to various positions dependent upon the value of a variable condition, a first control element carried by said pointer, a second control element, a movable member mounted for movement through a path parallel to the path of movement of said pointer, a temperature responsive means to support said second control element on said member whereby as the ambient temperature varies the position of said second control element relative to said member will be varied, said control elements cooperating to produce a control operation when said first and second control elements are in a given relative position, and means to move said member through its path to various positions relative to the zero position of said pointer.

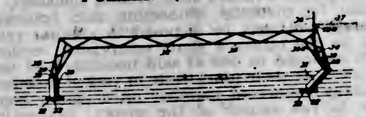
2,462,567
PISTON CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES AND SLEEVELIKE PISTON RING CONSTRUCTION THEREFOR
Roger W. Stadiman, Los Angeles, Calif.
Application April 14, 1947, Serial No. 741,250
16 Claims. (Cl. 309—14)

1. A piston comprising a body having a head portion with at least three circumferential grooves and a skirt portion; a split sleeve-like piston ring member of thin sheet metal material

enveloping said skirt portion and in resilient contact with said skirt portion at a position below the upper end of said piston ring member; an inwardly turned flange on one end of said member partly filling an intermediate one of said grooves; and piston rings in such of said grooves as are left uncovered or partly filled by said sleeve.

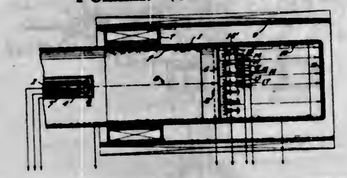


2,462,568
WATER KITE
Abram P. Steckel, Youngstown, Ohio
Application November 4, 1944, Serial No. 561,846
4 Claims. (Cl. 114—235)



1. A water craft comprising spaced substantially parallel buoyant vanes adapted to be largely submerged, and a bridge frame extending upwardly from the vanes and connecting them above the surface of the water, at least one of the vanes having a flat side disposed substantially vertical effective to develop pressure resisting lateral movement of the craft when towed by a line secured adjacent one end of the frame and causing the craft to stand off abeam of the towing means at an angle greater than 45° with the course of the latter.

2,462,569
TELEVISION RECEIVING TUBE WITH STORAGE PROPERTIES
George C. Szikiai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 11, 1946, Serial No. 696,151
4 Claims. (Cl. 250—150)

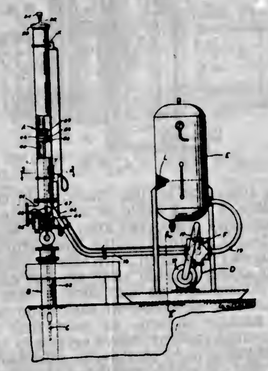


1. A television reproducing tube comprising an envelope containing a cathode ray beam gun, an imperforate target, means for producing a field for scanning the beam from said gun over one side of said target to produce a charge image thereon, a fluorescent screen spaced from the other side of the target, an auxiliary source of electrons between said screen and said target, an anode for projecting part of the electrons emitted by said auxiliary source onto the other surface of said target in proportion to the charge image thereon, and an electrode for accelerating the remainder of the electrons from said auxiliary source to bombard said screen.

2,462,570
METHOD OF FORMING PRINTING PLATES
Bennett F. Terry, Stamford, Conn.
Application February 3, 1944, Serial No. 520,861
2 Claims. (Cl. 204—6)

1. The method of forming a printing plate consisting of the step of processing the surface of a carrier to make it toothed, roughened or grained, the step of coating said surface with a thin silver halide emulsion, whereby the outer surface of said emulsion conforms to said toothed, roughened or grained surface, the further step of photographing the matter to be reproduced on said silver halide emulsion, and developing, fixing, and forming in said emulsion a tanned image of said matter, treating a wax material to make it electrically conductive, said material being adapted to set, the step of applying said material to the surface of said tanned emulsion under pressure and allowing it to set, the step of removing said material from said emulsion after the same has been set, the step of electro-depositing a metallic layer on the surface bearing said impression, and the final steps of removing said layer from said material and backing and mounting the same.

2,462,571
MAGNETIC STROKE CONTROL FOR CYLINDER AND PISTON MECHANISMS
Robert Hurd Thompson and Herbert Harvey, Los Angeles, Calif., assignors to Leo M. Harvey, Los Angeles, Calif.
Application November 28, 1944, Serial No. 565,549
6 Claims. (Cl. 121—148)



1. In combination, a cylinder, a movable element operable in the cylinder and including a piston, and a control operable by the said element including a magnet at the exterior of the cylinder, a magnet in the cylinder and carried by said element, and a carrier for the magnet in the cylinder and rotatably connected with the piston, one of

the magnets being movable and being adapted to move when the two magnets are opposite each other.

incidence with the axis of said marking tool and a rest position away from said tool, whereby both said marking tool and boring tool can be lowered

fluid delivery nozzle in spaced relation with the adjacent end of the tubular member, and said nozzle supporting means being resilient and when flexed toward the adjacent end of the tubular

end of said tube, an indicia carrying chart positioned with its center in alignment with the fixed end of said tube, and indicating means carried solely by said body on the free end of said tube and directly cooperating with the chart for in-

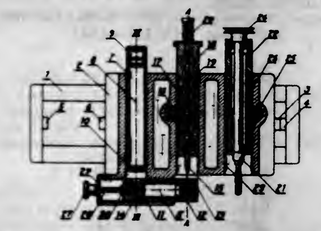
the magnets being movable and being adapted to move when the two magnets are opposite each other.

2,462,572
VULCANIZING RUBBERY BUTADIENE POLYMERS WITH DIXANTHIC DISULFIDES
Monte C. Throdahl, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application September 22, 1944, Serial No. 555,399
15 Claims. (Cl. 260—79)

1. A method of vulcanizing a vulcanizable rubbery polymer of a group consisting of polymers of butadiene-1,3 and methyl substitution products thereof and copolymers of these with copolymerizable aryl olefines and acrylonitriles which comprises adding to said rubbery polymer a dixanthic disulfide vulcanizing agent comprising a compound containing the nucleus

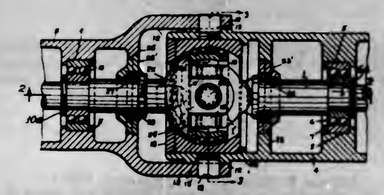
attached to saturated hydrocarbon groups and 0.1–1.0% of an organic mercaptan of the group consisting of alkyl mercaptans, aralkyl mercaptans and aryl mercaptans and heating the mixture at vulcanizing temperature in the absence of elemental sulfur for a time sufficient to effect a cure at least equivalent to 30 minutes at 141.5° C.

2,462,573
PRECISION MACHINE TOOL
Fernand Turrettini, Bellevue-Geneva, Switzerland, assignor to Societe Genevoise D'Instruments de Physique, Geneva, Switzerland, a firm of Switzerland
Application October 22, 1947, Serial No. 781,457
In Switzerland November 24, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1964
3 Claims. (Cl. 77—5)



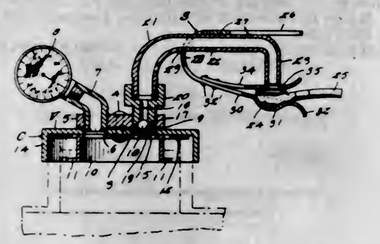
1. In a precision boring machine in combination a frame, a work table on said frame, a horizontal guideway supported above said work table on said frame, a tool-holder slide shiftable on said guideway between two fixed abutments, means for arresting said slide against said abutments, a microscope on said slide, a first guiding sleeve vertically shiftable in said slide, a marking tool axially slidable in said first guiding sleeve, a second guiding sleeve vertically shiftable in said slide in spaced relation to said first sleeve, a boring tool rotatably mounted in said second guiding sleeve, said first and second guiding sleeves being at a spacing from one another equal to the run of said slide on said guideway, and a prism assembly forming a part of said microscope shiftable parallelly to said guideway on said slide between a working position in which the optical axis of said microscope is brought in coincidence with the axis of said marking tool and a rest position away from said tool, whereby both said marking tool and boring tool can be lowered in succession onto the same point of the working piece which has been determined by the microscope.

2,462,574
JOINT FOR SHAFTS
Edward E. Wallace, Cleveland Heights, Ohio; Daisy T. Wallace administratrix of said Edward E. Wallace, deceased
Application September 28, 1942, Serial No. 459,943
7 Claims. (Cl. 64—4)



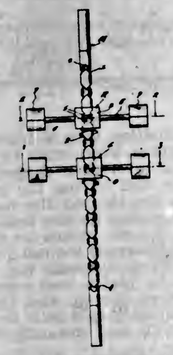
1. The combination with related housings, of means for pivotally connecting said housings, whereby one may be disposed in angular relation to the other, a shaft comprising sections each mounted in one of said housings and terminating at their inner ends in forked members pivotally connected together on a center common to the center of the pivotal connecting means for said housings, a bearing in each housing for the adjacent shaft section spaced from the forked member thereof, and bearing devices surrounding said forked members, one device being carried by the housing for one shaft section and the other device being carried by the forked member for the other shaft section, the opposed surfaces of said bearing devices being spherically curved about the center of said forked members.

2,462,575
PIPE COUPLING
Uel T. Walker, Hollywood, Fla.
Application December 27, 1944, Serial No. 569,950
5 Claims. (Cl. 285—108)



1. A cap for the filling opening of a fuel tank or the like, said cap including a head plate having an opening therethrough, a tubular member connected at one end with said opening for communication through the cap with the interior of the tank, the outer end of the tubular member being angled to open downwardly when the cap is in applied position, means carried by the tubular member and having spaced relation with the said outer end of such member for supporting a fluid delivery nozzle in spaced relation with the adjacent end of the tubular member, and said nozzle supporting means being resilient and when flexed toward the adjacent end of the tubular member functioning to shift a supported nozzle to position against the end of the tubular member.

2,462,576
WHIRLING TOY
Uel Theodore Walker, Hollywood, Fla.
Application December 28, 1945, Serial No. 637,634
1 Claim. (Cl. 46—47)

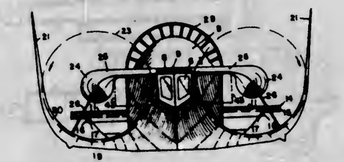


A toy of the class described comprising a long member of round cross-section, crossing spiral grooves extending along said member in substantially the same pitch, two rotating elements having bores through which the long member is freely disposed, and a pair of spaced pins carried by each of said rotating elements and projecting into the bore thereof, the pairs of pins of said elements engaging in separate grooves, said pins of each element being disposed in a plane oblique to the axis of the bore of the element in accordance with the pitch of the groove the pins of each pair being spaced apart a distance in excess of the width of the grooves, and the plane of the pins of one pair being perpendicular to the plane of the other pair for the engagement of the pairs of pins in separate grooves whereby to cause one element to rotate reversely to the other element.

2,462,577
WIND-PRESSURE GAUGE
James P. Warren, Freeport, Tex.
Application October 22, 1945, Serial No. 623,713
5 Claims. (Cl. 73—189)

2. A wind velocity indicator comprising a fixed support having an opening therethrough, a resilient flexible tube fixed at one end in the opening in said support and extending vertically therefrom, a wind displaceable body fixed to the free end of said tube, an indicia carrying chart positioned with its center in alignment with the fixed end of said tube, and indicating means carried solely by said body on the free end of said tube and directly cooperating with the chart for indicating deflections of said body.

2,462,578
POWER LIFT PLANE
Douglas K. Warner, Sarasota, Fla.
Application November 29, 1943, Serial No. 512,209
11 Claims. (Cl. 244—13)



7. In an airplane, a fuselage and propellers said fuselage having a depth of more than half the propeller diameter and at the section near said propellers having indented sides sloping upwardly inwardly in close conformation to the arcs transcribed by the tips of said propellers and wings extended outwardly, upwardly beneath said propellers from the lower portion of said fuselage forming troughs closely fitting the slip streams of said propellers, a wing extended outwardly from the top of said fuselage and having bent down, large diameter, streamlined, elipsoidal tips rearward of said propellers and said propellers turned in opposite directions so that all blades move upwardly in front of said wings and downwardly around said tips in a manner to blow air down around the said tips oppositely to normal wing tip vortex flow and to blow air periodically upwardly in front of said wing in a manner to produce a very rapid and favorable Katzmayr action on said wing, each time a propeller blade passes up in front of said wing.

2,462,579
MATTRESS
Lester W. Warner, Miami, Fla.
Application February 1, 1946, Serial No. 644,756
2 Claims. (Cl. 5—345)

1. A mattress made principally of sponge rubber and having an indentation of substantial size in one face near one end, and removable sponge rubber filler sections each substantially fitting the indentation, a plurality of the filler sections when placed one on top of the other substantially completely filling the indentation or partly filling it, according to the number used, and thereby providing an adjustable head-supporting surface.

2,462,580
HYDRAULIC VALVE AND HYDRAULIC POWER DEVICE EMBODYING SUCH VALVES
Cyril Daniel Watson, Farnborough, England
Application March 7, 1946, Serial No. 652,531
In Great Britain March 20, 1945
6 Claims. (Cl. 121—41)

1. A device of the kind referred to comprising in combination: a hydraulic jack; a movable pis-

ton and a hollow piston rod in said jack; an abutment on said piston; a head on said jack, said head having a bore therein; a sleeve on said head,

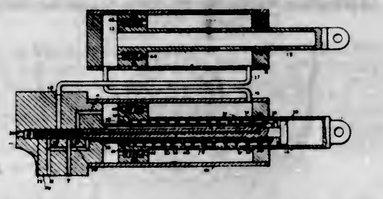
the direction of the plane of the shank also to admit an intermediate portion of the length of the yarn into the eye in threading the guide.

mittent suction effected through the suction opening, the tube being of a length substantially equal to the length of a teat with the lower

---

2,462,586
SEAL FOR RESISTING HIGH PRESSURES
David J. Whittingham, Watertown, N. Y., assignor to The New York Air Brake Company, a cor-

ton and a hollow piston rod in said jack; an abutment on said piston; a head on said jack, said head having a bore therein; a sleeve on said head, said sleeve extending within the body of said jack and said piston sliding on, and said hollow piston rod surrounding, said sleeve; a movable valve member slidable in said bore in said head for controlling the supply of pressure fluid to said jack; a rod-like extension on said valve member slidable within said sleeve; an abutment on the rear end of said rod-like extension; a spring located

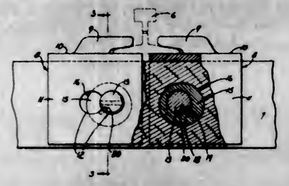


within said hollow piston rod and surrounding said sleeve, said spring bearing at one end against said piston abutment and at the other end against said abutment on said extension, and means for applying a selectively controlled hydraulic pressure to said valve member against the action of said spring whereby the resultant effort applied to said extension moves said valve member in a direction to cause displacement of said piston and said piston abutment in a direction appropriate for annulling said resultant effort.

2,462,581
WARP GUIDE
Thomas E. Watson, Tewksbury, Mass., assignor to Heinze Electric Company, Lowell, Mass.
Application August 8, 1945, Serial No. 609,537
1 Claim. (Cl. 28—54)

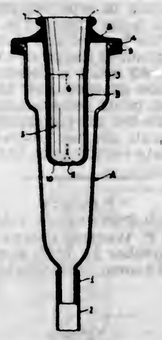
A warp guide for lease combs having in combination a flat shank and dents formed integrally therewith by splitting one end of the guide, the dents at points adjacent their junction with the shank being disposed in mutually diverging relation away from the plane of the shank, thereafter converging and crossing to define an eye to guide a warp yarn, and after crossing being continued substantially beyond the eye in parallel to each other on opposite sides of the plane of the shank, the dents being spaced apart from each other in the direction of the plane of the shank also to admit an intermediate portion of the length of the yarn into the eye in threading the guide.

2,462,582
RAIL FASTENING MEANS FOR WOOD TIES
John K. Wedgworth, York, Ala.
Application January 29, 1948, Serial No. 5,048
4 Claims. (Cl. 238—275)



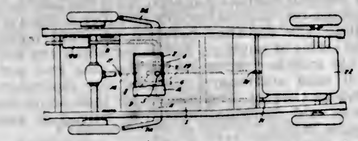
1. The combination with a track rail having base flanges and a wood cross tie beneath the rail, of a pair of inverted U-shaped tie plates to straddle the tie and having top portions positioned between the tie and the base flanges of the rail and depending flanges positioned on opposite sides of the tie, means on the tie plates to grip the base flanges of the rail, fastening bolts passing transversely through the tie and the flanges of the tie plates, and eccentric means positioned between the tie and the bolts, and operable by rotation of said bolts to move the tie plates downwardly and inwardly toward each other.

2,462,583
TEAT CUP
Alfred C. Welby, Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Application June 4, 1945, Serial No. 597,525
3 Claims. (Cl. 31—84)



1. A teat cup device for milking machines comprising an outer shell of relatively rigid material and having a suction opening therein, a flexible collar releasably secured to the upper end of the shell and having an integral teat receiving tube extending downwardly into the shell from a point spaced radially inwardly from the outer periphery of the shell, and with the lower end of the tube being suspended for free movement within the shell, whereby the entire tube may move axially of the shell when the collar is flexed under pulsating action produced by intermittent suction effected through the suction opening, the tube being of a length substantially equal to the length of a teat with the lower end of the teat located at the lower end of the tube when the latter is in position on a teat and the lower end of the tube having an inwardly directed flange forming a bottom wall support for the lower end of the teat.

2,462,584
NONSKID DEVICE FOR AUTOMOBILES
Charles H. Welch, Flint, Mich., assignor of twenty-five per cent to Wrex A. Weaver, Flint, Mich.
Application June 8, 1948, Serial No. 31,640
1 Claim. (Cl. 291—34)



The combination with an automobile having rear wheels, a floor and an exhaust pipe extending beneath said floor, of a sand box resting on said floor and having a sand delivery opening in its bottom, said floor having an opening registering with the first opening, a pair of spaced L-shaped guides extending longitudinally of and beneath the floor, a sliding valve mounted in said guides and having a sand delivery opening therein, a spring connecting the automobile frame and the valve, the spring normally holding the last opening out of registry with the floor opening, manually controlled means to move the valve against the action of the spring and bring the valve and floor openings into registry, a bearing plate held to the lower side of said guides, a main sand duct extending transversely of the automobile and held against said plate, said bearing plate and sand duct having registering openings aligned with the floor opening, said exhaust pipe extending along the longitudinal axis of and within the major part of said duct and close below said valve, and delivery nozzles extending downwardly from the ends of said duct to terminate in front of said rear wheels.

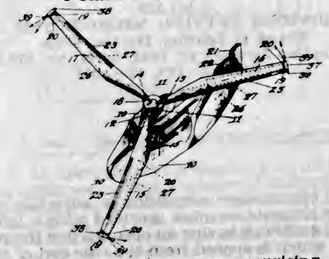
2,462,585
SEAR MECHANISM
Victor H. Wesson, deceased, late of Palmer, Mass., by Springfield Safe Deposit and Trust Company, executor, Springfield, Mass., assignor to Eleanor M. Wesson, Palmer, Mass.
Application August 31, 1945, Serial No. 613,928
14 Claims. (Cl. 42—69)

4. A firearm having in combination a spring-actuated pivoted hammer, a trigger, a roller clutch device operative to hold the hammer at any degree of cock, and trigger-actuated means for releasing the hammer from any cocked position.

2,462,586
SEAL FOR RESISTING HIGH PRESSURES
David J. Whittingham, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application January 2, 1946, Serial No. 638,626
2 Claims. (Cl. 309—23)

1. A guard ring for resisting extrusion of rubber-like sealing rings into the working clearance of cylinder-piston assemblies of the type in which a groove in one component of the cylinder-piston assembly has a conical side portion and contains a rubber-like sealing ring which seals against the cylindrical face of the other component of said assembly, said guard ring being of substantially triangular cross-section and having a conical face face adapted to mate with the conical side portion of the groove in said one component, a cylindrical face adapted to mate with the cylindrical face of said other component, and a third face adapted to be presented toward said rubber-like ring, said guard ring being of hard elastic material and split so that it may expand and contract as it moves in contact with the conical side portion of the groove, the split being of stepped configuration and comprising a slender tongue which projects from the portion of the ring at one side of the split, overlaps the split and seats on a mating surface in a recess formed in the ring at the other side of the split, said mating surface being substantially parallel with and said recess being formed in said third face of the guard ring, the tongue and the recess with which it coacts having inclined ends whereby the tendency to pinch the rubber-like ring is minimized.

2,462,587
JET PROPELLED HELICOPTER ROTOR
Albert R. Wilcox, Washington, D. C.
Application December 21, 1944, Serial No. 569,182
4 Claims. (Cl. 170—135.4)



1. A helicopter rotor vane comprising an air

admission and mixing chamber, disposed axially of the vane and having air inlet shutters extending along the leading edge of the vane, fuel inlet means opening into said mixing chamber, a com-

said guideway for longitudinal movement therein, said stationary member having adjacent the rear end of said open portion of, and substantially in line with said guideway means for accurately po-

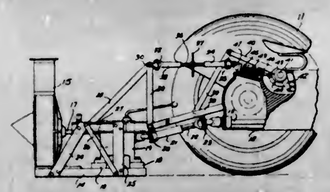
2,462,591
TREATMENT OF SYNTHETIC RUBBER LATEX
Erving Arundale, Westfield, N. J., assignor to

carbon material and by distillation from a pitch-containing tar emulsion obtained in the vapor phase pyrolysis of petroleum oil in the presence of steam, said pitch resin being characterized by a content less than 20% its weight of material

admission and mixing chamber, disposed axially of the vane and having air inlet shutters extending along the leading edge of the vane, fuel inlet means opening into said mixing chamber, a combustion chamber disposed parallel to and in juxtaposition with the mixing chamber and in continuous but restricted communication therewith, igniting means in said combustion chamber, jet tubes positioned at the outer ends of the vane and discharging rearwardly thereof, port means connecting both said chambers with said jet means.

2,462,588
GRAIN BLOWER DRIVE MECHANISM
Edward J. Wondra, Mayville, Wis.
Application June 6, 1947, Serial No. 753,136
1 Claim. (Cl. 230—39)

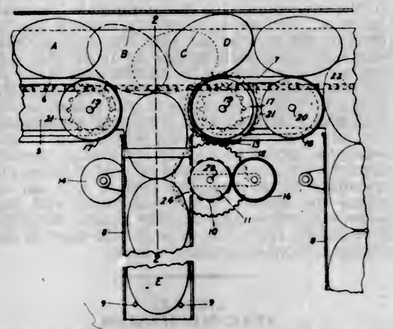


The combination with a tractor having a frame, a power take-off shaft, and a hydraulic lift mechanism, of a grain blower attachment mounted on the rear of said tractor, said attachment comprising a supporting frame, a blower unit including a rotor mounted on said supporting frame, a speed-changing transmission unit mounted on said supporting frame intermediate the tractor and said blower unit, means connecting the driven shaft of the transmission unit to the blower rotor, shaft means, means connecting the ends of the shaft means respectively to the driving shaft of the transmission unit and to the power take-off shaft of the tractor for universal pivotal movement, said shaft means comprising a sleeve member and a rod member telescopically and non-rotatably received in said sleeve member to permit axial movement of said rod relative to said sleeve, means yieldably connecting the upper portion of said supporting frame to the frame of the tractor and including means for adjusting the angular position of said supporting frame, and means operatively connected to the hydraulic lift mechanism of the tractor for adjusting the vertical position of said supporting frame for elevating the latter during the transportation of said grain blower attachment.

2,462,589
DIVIDER SETTING MICROMETER
Frank E. Zehring, Dayton, Ohio
Application January 17, 1945, Serial No. 573,258
7 Claims. (Cl. 33—164)

2. A micrometer comprising a normally stationary elongate member provided with a longitudinal guideway having an open portion the rear end of which is spaced from the rear end of said member, a second elongate member mounted in said guideway for longitudinal movement therein, said stationary member having adjacent the rear end of said open portion of and substantially in line with said guideway means for accurately positioning one arm of a divider at a point fixed with relation thereto, said movable member having means for accurately positioning the other arm of said divider at any one of a series of points thereon spaced equal distances one from the other lengthwise of said guideway, the rearmost positioning point of said series being spaced from the positioning point of said stationary member a distance equal to the distance between adjacent positioning points of said series when said movable member is in its rearmost position, said movable member also having means for positioning the last mentioned arm of said divider at a point thereon normally spaced from the positioning means on said stationary member a distance less than the distance between adjacent points of said series of points, a device for actuating said movable member mounted on the rear end portion of said stationary member for movement lengthwise thereof, and means for indicating the distance said movable member is moved by said actuating device.

2,462,590
CAN-MARKING DEVICE
John Albertoli, San Francisco, Calif.
Application January 21, 1946, Serial No. 642,489
1 Claim. (Cl. 101—37)

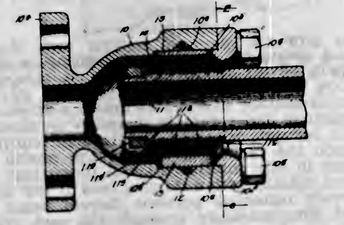


In a machine for marking a side of a can, a vertical chute for said cans and having a window in one side, means for feeding cans into said chute, a belt pulley at the upper end of the chute adjacent the window provided side, a shaft whereon said pulley is fixed, a second belt pulley spaced from the first pulley, a belt trained around said belt pulleys for supporting on its upper run cans overrunning the chute when filled, a shaft whereon said second pulley is fixed, driving means for said first shaft, a marker-wheel having a segmental portion projecting into the chute through said window, a rotatable shaft whereon said marker-wheel is fixed, gearing connecting said first and third shafts and moving the surface of the marker-wheel in synchronism with said belt, and stops at the lower end of said chute positioned to cause the column of cans in the chute to be held so that abutting ends of two adjacent cans in the chute lie opposite and free from said marker-wheel.

2,462,591
TREATMENT OF SYNTHETIC RUBBER LATEX
Erving Arundale, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 1, 1946, Serial No. 673,899
9 Claims. (Cl. 260—84.5)

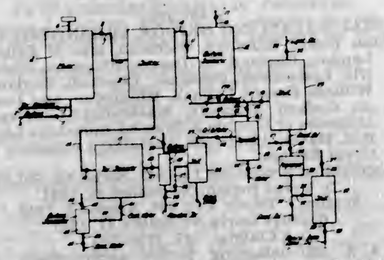
1. The process of improving the creaming of synthetic latices obtained by the polymerization of a conjugated compound selected from the group consisting of butadiene, isoprene, piperylene, dimethyl butadiene and 2-chlorobutadiene-1,3 in aqueous emulsion using an ammonium soap emulsifier which comprises adding formaldehyde to said latex to react with the emulsifier to make the latex unstable and to increase the particle size of the latex and then adding an alkali to the latex to render it stable.

2,462,592
FLEXIBLE JOINT
Francis N. Bard, Highland Park, Ill.
Application October 5, 1944, Serial No. 557,244
5 Claims. (Cl. 285—90)



1. A joint of the character described, including: an outer joint member; an inner joint member, said members having spaced confronting surfaces, at least one of the confronting surfaces being cylindrical; an annular eccentric member rotatable on said cylindrical surface; and resilient means between said annular member and the other of the confronting surfaces permitting angular movement between said joint members.

2,462,593
PITCH RESIN
Howard R. Batcheider, Chicago, Ill., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
Application August 17, 1945, Serial No. 611,130
6 Claims. (Cl. 196—152)

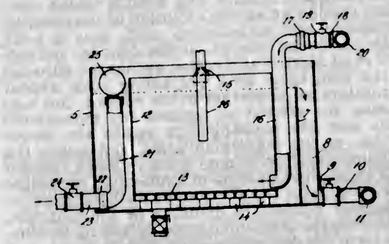


1. A pitch resin produced by demulsification and extraction with liquid phase aliphatic hydrocarbon material and by distillation from a pitch-containing tar emulsion obtained in the vapor phase pyrolysis of petroleum oil in the presence of steam, said pitch resin being characterized by a content less than 20% its weight of material soluble in pentane, by a content of material soluble in acetone and insoluble in petroleum ether less than 25% of the total non-oily material (excluding free carbon) insoluble in petroleum ether, and by its content of more than 95% carbon and hydrogen.

2,462,594
MULTIPOSITION SWITCH
James F. Beal, Renfrew, Ontario, Canada, assignor to Renfrew Electric & Refrigerator Company Limited, Renfrew, Ontario, Canada, a corporation of Canada
Application June 19, 1945, Serial No. 600,338
9 Claims. (Cl. 200—6)

1. In a multi-position switch, an insulated support member provided with a series of fixed contacts arranged in different planes, a movable insulated member provided with a series of spaced contacts arranged in different planes and selectively movable into and out of contact engagement with the fixed contacts arranged in different planes to establish a series of different load circuits, registrative means for indicating the different circuit establishing positions of the movable member and means for maintaining constant contact between at least one pair of the fixed contacts and movable contacts.

2,462,595
SCREENING
Fremont W. Benedict, Upper Darby, Pa.
Application August 3, 1945, Serial No. 608,719
3 Claims. (Cl. 210—150)



1. An apparatus for screening a liquid containing solids comprising a relatively stationary basin having an inside overflow weir spaced from the adjacent wall of the basin and providing therewith a liquid discharge channel, a discharge outlet in liquid communication with said channel near the bottom thereof, a portable receptacle

having an imperforate enclosing wall and a perforated bottom adapted to be lowered into operative position within said basin with its perforated bottom spaced from the bottom of the basin and with the top of its imperforate wall at a higher level than said liquid discharge, means connected

generating acid than are the polyamino acids when the ammonium hydroxide elutriation is omitted.

2,462,598
ROTATABLE DISK PERPETUAL CALENDAR

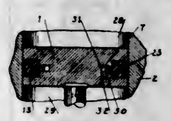
adjust a balancing component so as to tend to maintain said bridge balanced, including in combination a pair of fixed arms, a first adjustable arm having a non-linear characteristic including a portion of low slope and a second adjustable arm effectively connected to said first adjustable arm and to a point on said fixed arms

time continuously removing the forming water of esterification in the form of an azeotropic isolating the di-(2ethylhexyl) tetrachlorophthalate formed thereby.

2,462,602

having an imperforate enclosing wall and a perforated bottom adapted to be lowered into operative position within said basin with its perforated bottom spaced from the bottom of the basin and with the top of its imperforate wall at a higher level than said liquid discharge, means connected with said receptacle for supplying above and approximate the bottom thereof a liquid containing solids, a liquid discharge outlet communicating with said basin near the bottom thereof and having a control valve, a liquid discharge pipe within the basin and having a swivel connection with said discharge outlet, and means for maintaining the inlet of said discharge pipe approximate the liquid level in said basin.

2,462,596
PACKING
Arthur J. Bent, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 30, 1945, Serial No. 585,638
1 Claim. (Cl. 309—23)

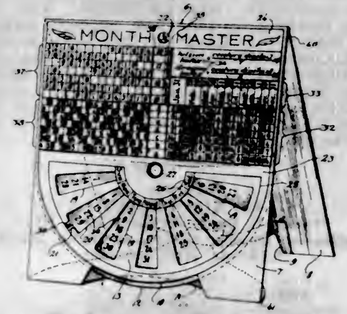


The combination in a packing structure of a pair of cooperating members having opposite coaxial cylindrical faces, one of said members having formed therein an annular packing groove open to its cylindrical face and an annular recess open to said groove, a yieldable packing element of normal circular cross section disposed in said groove and engaging the face of the other member and comprising an annular portion disposed within said recess, and a conduit connecting to atmosphere the bottom of said recess.

2,462,597
AMINO ACID SEPARATION
Richard J. Block, Scarsdale, N. Y., assignor to C. M. Armstrong, Inc., a corporation of New York
No Drawing. Application February 25, 1946, Serial No. 650,121
3 Claims. (Cl. 260—529)

1. In the separation of essential polyamino from monoamino acids, the method which comprises passing an aqueous solution of the essential polyamino and monoamino acids over a solid, water-insoluble phenol formaldehyde sulfonic acid resin serving as a cation exchanger adjusted to the acid cycle until polyamino acids appear in substantial proportion in the effluent, this step causing the effluent to contain the monoamino acids and the exchanger to retain the major portion of the polyamino acids, elutriating the exchanger and polyamino acids retained thereon with an aqueous solution of ammonium hydroxide and continuing the elutriation until ammonium hydroxide appears in quantity in the elutriate, to liberate the polyamino acids, collecting in solution form the polyamino acids thus liberated, and then treating the elutriated exchanger with a solution of a regenerating acid to remove ammonium hydroxide and thus adjust the exchanger to the acid cycle and in condition for reuse with a fresh portion of the acidic solution of the polyamino and monoamino acids, the ammonium hydroxide which liberates the polyamino acids being itself more easily liberated by the regenerating acid than are the polyamino acids when the ammonium hydroxide elutriation is omitted.

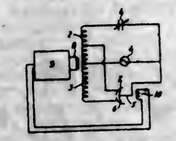
2,462,598
ROTATABLE DISK, PERPETUAL CALENDAR WITH INTERLACED SPIRAL FORMATIONS
Richard Blodget, Chicago, Ill.
Application February 15, 1945, Serial No. 577,989
2 Claims. (Cl. 40—113)



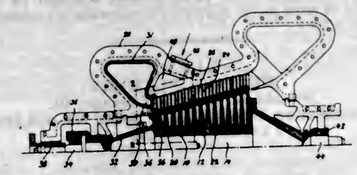
1. A perpetual calendar comprising, a static support having a grilled section, a computing section, and a calendar index register merging with an opening of the said grilled section; and a calendar dial rotatably mounted on the said static support, the said dial having imprinted thereon the numerical days of the month arranged in dual interlaced spiral formations and spaced initially with a starting lead of 180° seven alternate columnar portions thereof being exposed simultaneously through the said grilled section, the composite interlacing of the said spiral formations resulting in 28 calendar indices, each of the said indices adapted to be exposed alternately through the said calendar index register, the said numerical days of the month being imprinted twice only up to and including the numeral 28 but all of the numerical days being consecutively arranged for each of said spiral formations, one of said spiral formations terminating with the numeral 30 in which the numeral 29 appears once, the other of said spiral formations terminating with the numeral 31 in which the numeral 29 appears twice and the numeral 30 appears once, the numerals 30 of said one spiral and 31 of said other spiral formation appearing but once in each of said spiral formations and being preceded by a blank space.

2,462,599
SELF-BALANCING BRIDGE ARRANGEMENT
Alan Dower Blumlein, deceased, late of Ealing, London, England, by Doreen Blumlein, executrix, Lescudjack, Penzance, Cornwall, England, William Horace Connell, Hillingdon, and Dennis Godson Holloway, Maidenhead, England, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application September 11, 1943. Serial No. 501,952
In Great Britain November 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 21, 1961
5 Claims. (Cl. 323—75)

4. A self-balancing bridge arrangement in which out-of-balance voltages or currents developed in said bridge in operation are caused to adjust a balancing component so as to tend to maintain said bridge balanced, including in combination a pair of fixed arms, a first adjustable arm having a non-linear characteristic including a portion of low slope and a second adjustable arm effectively connected to said first adjustable arm and to a point on said fixed arms and connected to oppose said balancing component and means operated in response to said out-of-balance voltages or currents, and effectively coupled to said adjustable arms so that the admittances of said first and second adjustable arms are changed in opposite senses and at different rates for equal changes in said adjustable arms whereby the characteristic of said balancing component is effectively modified so as to increase the slope of said portion of low slope.



2,462,600
TURBINE
Gustav Karl William Boestad and Erik Otto Erikson, Lidingo, Sweden, assignors, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application November 10, 1943, Serial No. 509,800
In Sweden January 16, 1943
3 Claims. (Cl. 60—41)



1. In a turbine, a rotor having a blade carrying structure and blades carried by said structure, said blades and said blade carrying structure being of different materials, the blade material being an austenitic steel and the material of the blade carrying structure being a martensitic steel, and means for cooling the blade carrying structure of the rotor.

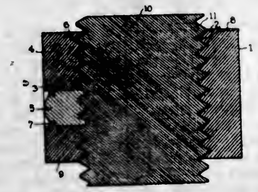
2,462,601
TETRACHLOROPHTHALIC DIESTERS
George J. Bohrer, Troy, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application January 15, 1946, Serial No. 641,412
3 Claims. (Cl. 260—475)

1. The method of preparing di-(2-ethylhexyl) tetrachlorophthalate which comprises (1) heating at a temperature of from 150 to 215° C. a mixture consisting of (a) 2-ethylhexanol, (b) a chlorinated compound selected from the class consisting of tetrachlorophthalic acid and tetrachlorophthalic anhydride, and (c) an esterification catalyst, the ingredients (a) and (b) being present in a molar ratio of from 2 to 8 mols of the former per mol of the latter, (2) continuing the heating of the mixture while at the same time continuously removing the forming water of esterification in the form of an azeotropic isolating the di-(2ethylhexyl) tetrachlorophthalate formed thereby.

2,462,602
PREPARATION OF VINYL ETHERS
Donald G. Botteron, Syracuse, N. Y., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application September 7, 1946, Serial No. 695,547
4 Claims. (Cl. 260—614)

1. A process of preparing a mixed vinyl lower-alkyl ether which comprises admixing the corresponding 1-chloroethyl lower-alkyl ether with pyridine and heating the mixture.

2,462,603
THREADED LOCKING DEVICE
Edmund R. Boots, Short Hills, N. J., assignor to The Nylok Corporation, New York, N. Y., a corporation of Delaware
Application March 1, 1945, Serial No. 580,387
2 Claims. (Cl. 151—7)



1. As a new article of manufacture, a self-locking nut provided with an internal screw thread, said nut being provided with a hole extending substantially radially through one side of the nut and through the internal thread, the internal screw thread opposite said hole being continuous, a plug of resilient plastic material seated in and fitting said hole and extending into said internal screw thread, holding means on said nut engaging the outer portion only of said plug, and comprising the sole means for preventing the outward movement of said plug, said plug being adapted to be pressed by the thread of the bolt when it is applied to the bolt, to be forced against said holding means, the reactive force of said pressure serving to force the nut and bolt in opposite directions laterally so that the nut and bolt threads opposite said plug are forced into tight frictional engagement.

2,462,604
WATER FILTER
Percival Lionel Boucher, Troon, Ayrshire, Scotland, assignor to Glenfield & Kennedy Limited, Kilmarnock, Ayrshire, Scotland, a corporation of Great Britain and Northern Ireland
Application June 11, 1946, Serial No. 676,083
In Great Britain March 9, 1945
2 Claims. (Cl. 210—199)

1. In an automatic self-cleaning water filter including a rotary drum mounted with its axis substantially horizontal, the periphery of the drum consisting essentially of a woven wire fabric screen, one end of the drum being open for water to flow thereinto, an improved water filter screen on said drum of corrosion-resisting woven wire

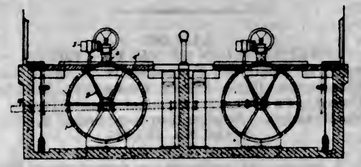
fabric with straight warps and crimped wefts, the warps being arranged in groups with each wire of each group in linear contact with another wire

a degree of transparency permitting the colored sections of said background member to be viewed therethrough whereby a pair of colors, each of which is selected from one of said members, may be viewed simultaneously and in superimposed relation, the relative rotatability of said members serving to permit different combina-

2,462,606
COUMARONE-INDENE RESIN STABILIZED WITH AN ALKYL POLYHYDROXY SPIRO INDANE
Samuel G. Burroughs, Pittsburgh, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsyl-

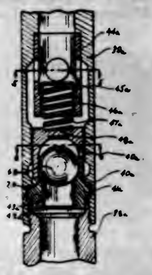
plate projecting slightly above pavement level, a load balancing spring acting on both free lever ends arranged below said knuckle connection, a guide plate held by said spring and supporting said free lever ends, a lever mechanism fixed within said box and moved by the movement of one of the load balancing bars, and a connection between said lever and said parking meter reset-

fabric with straight warps and crimped wefts, the warps being arranged in groups with each wire of each group in linear contact with another wire



of the group, whereby the size of the apertures of the wire fabric is reduced.

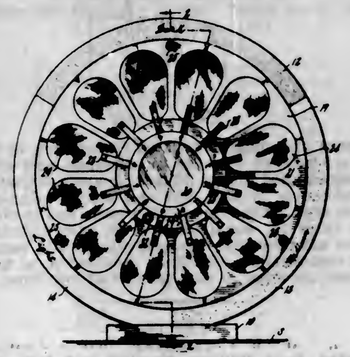
2,462,605
VALVE CAGE
Chalon E. Bridwell, Detroit, Mich.
Application September 2, 1944, Serial No. 552,529
4 Claims. (Cl. 277—70)



1. In a valve construction of the class described: a valve cage; a valve seat mounted on the lower end of said cage and having an opening therethrough for passage of liquid therethrough; a tubular member mounted in said valve cage above said seat in the path of flow of liquid through said valve and having lateral opening therethrough; an inverted cup-shaped member fixedly mounted in said tubular member; a plurality of concentrically arranged valves in said cage, each movable independently of the other and engageable with said valve seat for closing and opening therethrough and controlling flow of liquid therethrough; and resilient means engaging at one end with said cup-shaped member and its other end the outer of said valves for normally urging the same to closed position.

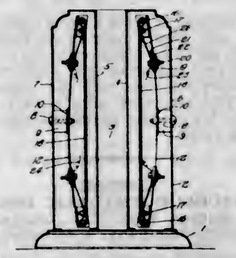
2,462,606
COSMETIC BLEND PREDETERMINING DEVICE
Jules Brodeur, New York, N. Y., assignor to Coty, Inc., Wilmington, Del., a corporation of Delaware
Application August 1, 1945, Serial No. 608,182
3 Claims. (Cl. 35—59)

1. A device for determining the combined effect of two superimposed layers of cosmetics; said device comprising a background member, a plurality of differently colored sections on said background member, a front member rotatable relative to said background member, a plurality of differently colored sections on said front member each of said front member colored sections having a degree of transparency permitting the colored sections of said background member to be viewed therethrough whereby a pair of colors, each of which is selected from one of said members, may be viewed simultaneously and in superimposed relation, the relative rotatability of said members serving to permit different combina-



tions of colors to be thus viewed, said front member colored sections comprising mesh material colored to represent cosmetic shades, the openings of said mesh material being of such size as to enable viewing of said background member therethrough while contributing enough of the color of said mesh material to provide a combination effect.

2,462,607
HEATING ELEMENT
Donald W. Browne, Chicago, Ill.
Application March 1, 1945, Serial No. 580,395
7 Claims. (Cl. 219—19)



1. In a heating device, an elongated resilient member, a pair of spaced apart rods supported at each of the end portions of the resilient member, at least the surface of said rods being of insulating material, and a resistance element wound back and forth over said rods with sufficient tightness to bend the resilient member into bow-shape to constantly hold the resistance element taut, the resistance element passing to one side of one rod and around the other rod of each pair of rods so that their main heating portions will lie in substantially the same plane.

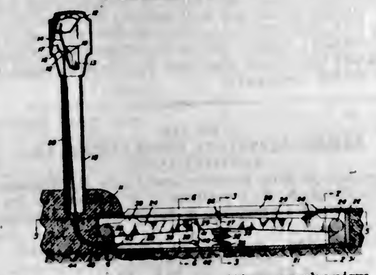
2,462,608
COUMARONE-INDENE RESIN STABILIZED WITH AN ALKYL POLYHYDROXY SPIRO INDANE
Samuel G. Burroughs, Pittsburgh, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application January 18, 1945, Serial No. 573,469
4 Claims. (Cl. 260—81)

1. A non-yellowing coumarone-indene resin composition consisting of coumarone and indene polymers and an alkyl polyhydroxy spiro indane material selected from the group consisting of the alkyl polyhydroxy spiro indanes, the sulphonated alkyl polyhydroxy spiro indanes and the boric acid salts of the alkyl polyhydroxy spiro indanes, the said alkyl polyhydroxy spiro indane material being present in a quantity approximately equal to from 0.05% to 5.00% the combined weight of the coumarone and indene polymers.

2,462,609
INDENE RESIN STABILIZED WITH AN ALKYL POLYHYDROXY SPIRO INDANE
Samuel G. Burroughs, Pittsburgh, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application January 18, 1945, Serial No. 573,470
4 Claims. (Cl. 260—80)

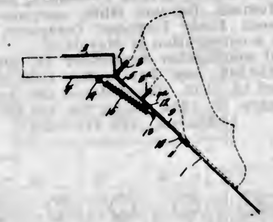
1. A non-yellowing indene resin composition consisting of indene polymers and an alkyl polyhydroxy spiro indane material selected from the group consisting of the alkyl polyhydroxy spiro indanes, the sulphonated alkyl polyhydroxy spiro indanes and the boric acid salts of the alkyl polyhydroxy spiro indanes, the said alkyl polyhydroxy spiro indane material being present in a quantity approximately equal to from 0.05% to 5.00% the weight of the indene polymers.

2,462,610
PARKING METER RESETTING MECHANISM
Fisher C. Burum, Houston, Tex., assignor of one-third to George B. Lindler, Houston, Tex.
Application February 5, 1948, Serial No. 6,453
3 Claims. (Cl. 74—2)



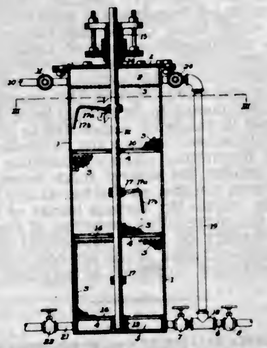
3. A parking meter resetting mechanism including a parking meter resetting lever, comprising an elongated box located in the ground below pavement level, a system of load balancing levers pivoted at the two ends of the box and projecting towards each other with their free ends, a knuckle connection between those free ends, a cam surface on each bar between said pivotal connection of the bars, an anvil plate resting on said cam surfaces, said anvil plate projecting slightly above pavement level, a load balancing spring acting on both free lever ends arranged below said knuckle connection, a guide plate held by said spring and supporting said free lever ends, a lever mechanism fixed within said box and moved by the movement of one of the load balancing bars, and a connection between said lever and said parking meter resetting lever.

2,462,611
SHOE OR BOOT DISPLAY DEVICE
Clarence M. Bye, Osseo, Wis.
Application June 5, 1947, Serial No. 752,809
4 Claims. (Cl. 211—34)



1. In a device of the class described, the combination of a body provided at its inner end with a support clamp, said body provided with a slot, a slidable plate on said body over said slot, means extending from said slidable plate through said slot and normally holding said slidable plate upon said body, a spring and means connecting the inner end of said spring to said support clamp, means connecting the outer end of said spring through said slot to said slidable plate, and said body and slidable plate provided with heel-clamping means.

2,462,612
LIQUID TREATING APPARATUS
John R. Craig, deceased, late of Pittsburgh, Pa., by The Union Trust Company of Pittsburgh, Pittsburgh, Pa., administrator
Application July 19, 1945, Serial No. 605,926
5 Claims. (Cl. 210—143)



1. In glass-ball liquid treating apparatus comprising a receptacle having therein at least one treating bed of glass balls, and connections for passing liquid through the said bed; a rotatable assembly in the said receptacle comprising a vertically mounted rotatable shaft, a ball-supporting platform, means to support the platform and to

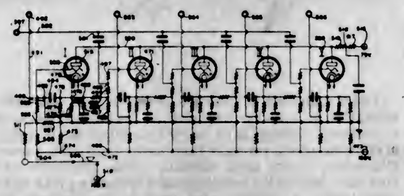
non-rotatably connect the platform with the shaft whereby the platform is rotated with the shaft, and an agitating element in said rotatable assembly carried by and connected with the said shaft to rotate therewith and arranged to produce agitation of the balls comprising the said treating pressure supplied thereto by said compressor, valve means for controlling discharge of accumulated condensate from said receptacle, fluid pressure motor means for actuating said valve means, a timing reservoir having a restricted communi-

2,462,617
EMBALMING APPARATUS
John H. Eckels, Merchantville, N. J., assignor to H. S. Eckels & Co., Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application May 25, 1944, Serial No. 537,211

edly-effective securing units rigidly attached to said member; each such unit including a keeper with a wedge-shaped passage therethrough and a holder slidable therein; spaced teeth at the outer end of the holder with an intervening bevel-edge respectively adapted to inclinedly-penetrate

non-rotatably connect the platform with the shaft whereby the platform is rotated with the shaft, and an agitating element in said rotatable assembly carried by and connected with the said shaft to rotate therewith and arranged to produce agitation of the balls comprising the said treating bed and rubbing between them under the tendency for the bed of glass balls to remain stationary as the ball-supporting platform of the said rotatable assembly is rotated in cleaning the apparatus.

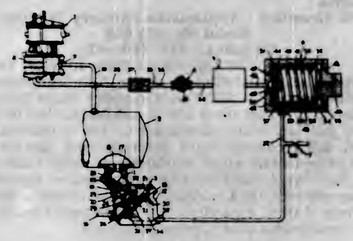
2,462,613
COMMUNICATION SYSTEM
Joseph R. Desch, Ernest V. Gulden, and Robert E. Mumma, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Original application September 16, 1942, Serial No. 458,546, now Patent No. 2,425,307, dated August 12, 1947. Divided and this application February 19, 1944, Serial No. 523,025
14 Claims. (Cl. 177—353)



1. In a receiving apparatus for a communication system in which different numbers of electrical impulses are assigned to represent different symbols which may be transmitted, the last of the impulses representing a symbol being distinctive from the rest, the combination of a plurality of banks of electron devices, the devices in the banks being differentially operable to count the number of impulses in a corresponding plurality of bursts and transform the impulses into direct representations of symbols in response to different number of impulses which represent the symbols and to store the representation of the symbols; common means upon which bursts of impulses are impressed in succession, each burst containing the number of impulses corresponding to that assigned to the symbol which it represents; normally inoperable relay means related to each of said plurality of banks for selectively routing the impulses from the common means to its related bank to render the devices in the bank responsive to one of the bursts of impulses; and means controlled by the last and distinctive electrical impulse in each burst to render the several relay means operative one after another as the bursts are received, to thereby enable the various bursts of impulses to cause the differential operation of the devices in the plurality of banks of devices to set up direct representations of the symbols represented by the different numbers of impulses in the bursts.

2,462,614
AUTOMATIC DRAINAGE APPARATUS
Chauncey O. De Witt, Teaneck, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 16, 1946, Serial No. 716,595
6 Claims. (Cl. 303—88)

1. In a drain valve apparatus, in combination, a compressor, a receptacle for storing fluid under pressure supplied thereto by said compressor, valve means for controlling discharge of accumulated condensate from said receptacle, fluid pressure motor means for actuating said valve means, a timing reservoir having a restricted communi-



cation with said compressor, one way flow means in said communication, means responsive to pressure of fluid in said reservoir for controlling communication of said fluid to said motor means, and means for venting the last mentioned communication to atmosphere.

2,462,615
METHOD OF CHROMIUM PLATING AND TREATING STEEL AIRPLANE PROPELLER BLADES
George Dubpernell, Watertown, Conn., assignor to United Chromium, Incorporated, New York, N. Y., a corporation of Delawar
No Drawing. Application February 17, 1945, Serial No. 578,552
2 Claims. (Cl. 204—37)

1. In a method for reducing the loss of fatigue strength of steels for aeroplane propeller blades consequent upon the electrodeposition of chromium protective coatings thereon, passing plating current from an anode to said steel part, as cathode, immersed in a cold aqueous bath below 40° C. containing from 500 g./l. upward to saturation of chromic (CrO_3) and sulphate catalyst acid radicals, the ratio between the chromic acid and the sulphate catalyst acid radical being between 230 to 1 and 160 to 1, electrodepositing from approximately .0005 to .001 inch chromium and heat treating the plated steel part to relieve stresses in the plated steel part.

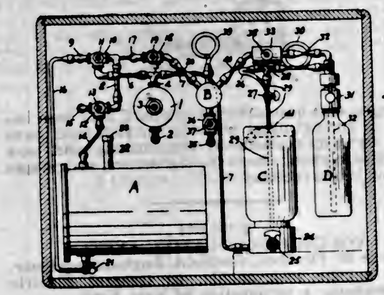
2,462,616
LUBRICATING OIL CONTAINING AN ANTIOXIDANT
Lawrence T. Eby, Roselle, and Louis A. Mikeska, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 5, 1944, Serial No. 566,772
4 Claims. (Cl. 252—49.6)

1. A composition of matter consisting essentially of a petroleum hydrocarbon product and an oxidation inhibiting proportion of a compound of the formula

$$(RAr)_m H_nBO_3$$

where Ar is an aryl nucleus, R represents at least one alkyl radical, the alkyl radicals containing a total of at least 16 carbon atoms, m is an integer from 1 to 3, n is 0, 1 or 2, and $m+n$ equal 3.

2,462,617
EMBALMING APPARATUS
John H. Eckels, Merchantville, N. J., assignor to H. S. Eckels & Co., Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application May 25, 1944, Serial No. 537,211
4 Claims. (Cl. 27—24)



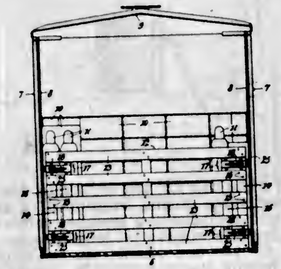
1. A self-contained embalming unit for simultaneously diluting embalming fluid and injecting the diluted fluid into a body, comprising a mixing chamber, an air pressure chamber, a reservoir for embalming fluid, a reducing valve, means for connecting said reducing valve to a continuous supply of water under pressure, a conduit connecting said reducing valve with said mixing chamber to continuously supply water thereto, a conduit connecting said reducing valve with said pressure chamber to compress air therein, a conduit connecting the upper portion of said pressure chamber with said reservoir, a conduit provided with a metering valve connecting said reservoir with said mixing chamber, the arrangement being such that both water and embalming fluid are supplied in a continuous manner under pressure to the mixing chamber, and a connection from the mixing chamber for injecting the diluted fluid into a body to be embalmed.

2,462,618
WATER DISPERSIBLE COATING VEHICLE
George E. Ellerman, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Original application December 10, 1943, Serial No. 513,727. Divided and this application February 10, 1945, Serial No. 577,353
7 Claims. (Cl. 260—22)

1. A water-emulsifiable, air drying coating composition comprising the product obtained by the steps of breaking by hydrolyzation the anhydride linkage of the addendum reaction product of maleic anhydride and a modified alkyd resin resulting from the esterification of a polyhydroxy alcohol with a dicarboxylic acid in the presence of a fatty acid glyceride drying oil and neutralizing the resultant hydrolyzed product with a mixture of alkali metal silicate and a water-soluble basic nitrogen compound of a class consisting of ammonia and a water-soluble amine.

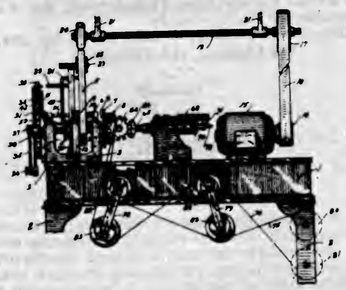
2,462,619
FREIGHT BRACING DEVICE
William F. Eisensmith, Penns Grove, N. J.
Application March 26, 1946, Serial No. 657,212
9 Claims. (Cl. 105—369)

1. A load brace for freight transporting vehicles comprising a freight abutment member; opposedly-effective securing units rigidly attached to said member; each such unit including a keeper with a wedge-shaped passage therethrough and a holder slidable therein; spaced teeth at the outer end of the holder with an intervening bevel-edge respectively adapted to inclinedly-penetrate



and impinge opposed wall faces of the vehicle counterwise to transit load shocks; means whereby the keeper and holder are maintained in cooperative assembly; and means whereby the holder may be held retracted within the keeper or arrested at differential extension relative to said keeper.

2,462,620
WINDING MACHINE
James M. England, Lebanon, Mo., assignor of one-third to David E. Owen and Edmond A. Gill, both of Litchfield, Ill.
Application May 4, 1945, Serial No. 591,964
15 Claims. (Cl. 242—13)



1. In an armature winding machine, armature holding means, means for rotating the holding means including belt driving means and a movable member having positions for tightening the belt and connecting driving power to the holding means and for loosening the belt and disconnecting driving power from the holding means, means operable independently of manual effect for maintaining the movable member in the belt tightening position when so placed, and means for automatically releasing the maintaining means so that the movable member can move to the belt loosening position when the armature holding means has been rotated a predetermined number of turns.

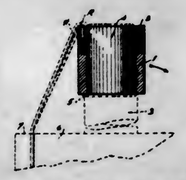
2,462,621
ARMATURE SHAFT WINDING CAP
James M. England, Lebanon, Mo., assignor of one-third to David E. Owen and Edmond A. Gill,

said raceway, means for driving staples through said raceway, a base, means pivoting together the rear portions of said housing and base, means on said housing forwardly of said pivot and engaging

dome-like plate the convex surface of which is adapted to contact the surface to be shaved, said plate being of a generally spherical configuration, a completely circular shearing blade rotatably

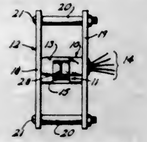
tions carrying an auxiliary lifting means adjustable towards and from the frame pivot, and

2,462,621
ARMATURE SHAFT WINDING CAP
James M. England, Lebanon, Mo., assignor of one-third to David E. Owen and Edmond A. Gill, both of Litchfield, Ill.
Application May 4, 1945, Serial No. 591,965
5 Claims. (Cl. 242—13)



1. A one piece cap for use in holding the ends of conductor wires during winding of a slotted armature and comprising a member constructed to have a bore of substantial length so as to be positioned on the end portion of an armature shaft and having circumferentially spaced holes therein for receiving the end portions of the conductor wire to be wound on the armature, each opening being so arranged in the member that when the member is on the shaft its wire receiving open end will be so directed in a direction away from the armature that with an end portion of a wire inserted in the opening, bent adjacent the open end of the opening and the wire positioned under tension in the first armature receiving slot therefor, the end portion which is received in the opening will be at an angle not greater than 90 degrees with the portion of the wire extending to the first receiving slot.

2,462,622
MOUNTING MEANS FOR VACUUM TUBES
Frederick R. Farrow, Jr., Audubon, N. J., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 4, 1946, Serial No. 694,757
9 Claims. (Cl. 248—361)



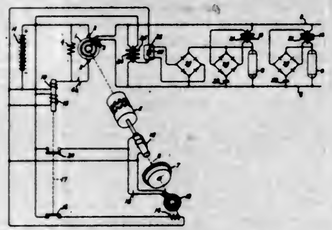
1. In an arrangement for mounting a vacuum tube provided with an electrode-enclosing envelope, framework including spaced confronting wall portions having an opening through which the tube may be introduced for positioning between said wall portions, and tube supporting means having a base portion and a tube-engaging portion, said base portion being connected with and disposed to extend between the wall portions, and said tube engaging portion being so constructed and arranged on the base portion as to engage the tube envelope when introduced between the wall portions through said opening.

2,462,623
STAPLING DEVICE
Alexander L. Flamm, Fairfield, Conn.
Application March 22, 1945, Serial No. 584,173
5 Claims. (Cl. 1—49)

1. In a stapling machine, a housing having a raceway therein, means for feeding staples to said raceway, means for driving staples through said raceway, a base, means pivoting together the rear portions of said housing and base, means on said housing forwardly of said pivot and engaging said base whereby the forward portions of the

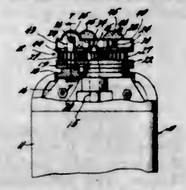
housing and base are spaced apart, said base being of spring metal whereby to yield and have the forward portions of the housing and base come into engagement during driving of a staple through said raceway.

2,462,624
VOLTAGE REGULATING SYSTEM
George H. Fletcher, Sheffield, England, assignor, by mesne assignments, to General Electric Company, a corporation of New York
Application May 18, 1945, Serial No. 594,397
In Great Britain June 29, 1944
24 Claims. (Cl. 171—97)



19. A variable speed dynamoelectric machine having a common armature provided with alternating current and direct current output terminals, a battery permanently connected to said direct current output terminals to be charged by said machine, a load circuit connected to said alternating current output terminals, voltage regulating means comprising a saturable reactor connected across said load circuit, and means responsive to at least a portion of the voltage across said load circuit for controlling the reactance of said reactor thereby to control both the direct current and alternating current output voltage of said machine by armature reaction.

2,462,625
SHAVING MACHINE
Irving Florman, New York, N. Y.
Application May 7, 1945, Serial No. 592,295
4 Claims. (Cl. 30—43)



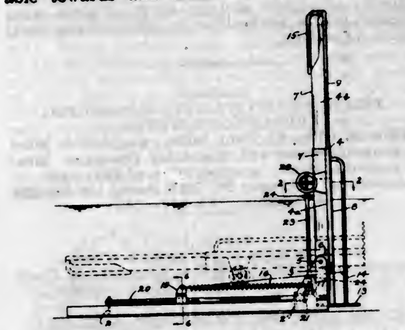
1. A shaving machine of the class described which comprises a shearing couple consisting of a dome-like plate the convex surface of which is adapted to contact the surface to be shaved, said plate being of a generally spherical configuration, a completely circular shearing blade rotatably mounted beneath said plate whereby the edge of said blade substantially defines a great circle of the sphere of which the plate is a part, and means for freely rotatably mounting said circular blade for rotation about its own axis so as to continually renew the effective cutting arc of its periphery which cooperates with the concavity of the plate, during operation.

2,462,626
PORTABLE FIRE ESCAPE
Joseph E. Forster, Oakland, Calif.
Application January 27, 1947, Serial No. 724,673
9 Claims. (Cl. 228—19.2)

2. A fire escape comprising; lazy tongs having a combination hand hold and tread fixedly mounted on the respective tong levers at the respective terminal joints, and means at one end of said lazy tongs for releasably securing the fire escape to a window ledge or the like; a spike hingedly mounted on the back of the fire escape at each terminal joint and foldable upwardly at will to provide compactness for carrying, and gravitationally dropping to engaging position when the fire escape is lowered from a window or the like, said spikes gradually increasing in length to provide slope to the fire escape and functioning to space the fire escape from the wall and to bite into the wall to secure the fire escape from swaying.

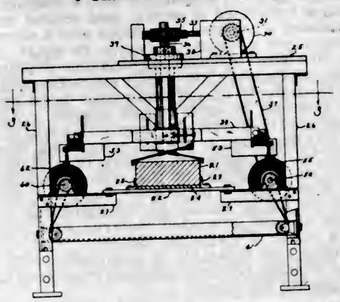
2,462,627
BAPTISMAL APPARATUS
Patrick H. Garrett, Mount Hope, W. Va.
Application May 8, 1946, Serial No. 668,261
14 Claims. (Cl. 4—185)

1. Baptismal apparatus comprising a swingable supporting frame, including a foot plate on which the person to be baptized may stand, a pivotal mounting for said frame permitting lowering and raising of the frame and person from and to normally erect position, respectively, said swingable frame comprising adjustable sections for extending and contracting the frame according to the height of the person, one of said sections carrying an auxiliary lifting means adjustable towards and from the frame pivot, and



handle means for moving the frame to and from said erect position.

2,462,628
MACHINE FOR MARKING THE SURFACE OF A COLUMN OF PLASTIC MATERIAL
Franklin I. Gase, Cleveland, Ohio
Application August 27, 1945, Serial No. 612,960
9 Claims. (Cl. 25—1)



1. A machine of the character described for applying flaked markings to the surface of a column of plastic but hardenable material moving relative thereto to thereby simulate the appearance of genuine cut stone, said machine comprising means for moving said column relative to said machine, scraping means adapted to scrape a surface of said column, movable means for moving said scraping means transversely across said column, said scraping means being loosely mounted for pivotal motion on said carrying means, and being biased to scraping contact with said column.

2,462,629
SUNLIGHT RESISTANT COMPOSITION
Philip Tucker Gidley, Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 11, 1944, Serial No. 563,090
5 Claims. (Cl. 260—17)

3. As a new composition of matter, a vulcanizable mixture consisting predominantly of a rubbery copolymer of substantially 74 parts of butadiene with substantially 26 parts of acrylonitrile

and ethyl cellulose, together with plasticisers, fillers, sulfur and a vulcanization accelerator, the rubbery copolymer and the ethyl cellulose being present in the composition in substantially equal

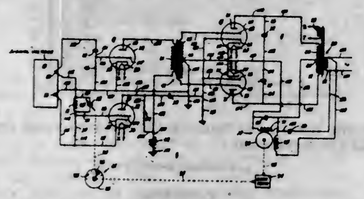
the fixed member, the fixed and movable members being shaped at their upper ends to form half-fingers which, when the movable members

2,462,635
CYCLIC POLYMERIC ORGANOAMINO-SILANES

metals during distillation of hydrogen cyanide from an aqueous solution of hydrogen cyanide, ammonium salts and sulfuric acid, obtained by scrubbing formamide decomposition products

and ethyl cellulose, together with plasticizers, fillers, sulfur and a vulcanization accelerator, the rubbery copolymer and the ethyl cellulose being present in the composition in substantially equal parts by weight.

2,462,630
PHASE-SENSITIVE SELF-BALANCING FREQUENCY METER
Willis H. Gille, St. Paul, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application February 28, 1945, Serial No. 580,226
13 Claims. (Cl. 172—245)



4. In a device of the class described, in combination: first and second circuits adapted to be traversed by signal currents alternating at a common variable frequency; said first circuit comprising a resistive impedance and a reactive impedance connected in series; said second circuit comprising a resistive impedance and a normally antiresonant network connected in series; electron discharge devices each having a plurality of control members for jointly regulating the discharge thereof; means impressing upon one of said members of each of said devices a voltage determined by the voltage drop across said second resistive impedance; means impressing upon a second of said members of each of said devices a voltage determined by the voltage drop across said first resistive impedance; said last named means including means for reversing the phase of one of said impressed voltages with respect to the other; a frequency indicator; and means actuating said indicator in accordance with the phase relation between voltages impressed upon said control members.

2,462,631
COATING COMPOSITIONS
Lewis D. Gittings and Robert H. Fundaburk, Anniston, Ala., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 13, 1944, Serial No. 526,332
14 Claims. (Cl. 106—239)

1. A plasticized composition comprising a rosin plasticized with at least one member of the group consisting of biphenyl, ortho-terphenyl, and meta-terphenyl.

2,462,632
APPLIANCE FOR STRETCHING GLOVES OR THE LIKE
Gideon Givoni, Melbourne, Victoria, Australia
Application May 2, 1946, Serial No. 666,657
In Australia May 24, 1945
9 Claims. (Cl. 223—80)

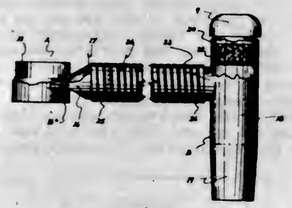
1. An appliance for stretching gloves or the like comprising a central fixed member and four movable members arranged two on each side of the fixed member, the fixed and movable members being shaped at their upper ends to form half-fingers which, when the movable members are closed, co-act in pairs to form four finger

members of two part construction, and means for actuating the movable members to cause the half-fingers of the respective finger members to open or separate.

2,462,633
ANIMAL FEED
Myers F. Gribbins, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 5, 1946, Serial No. 659,880
8 Claims. (Cl. 99—2)

1. Animal feed containing from 0.01 to 1.0% of a 3-hydrocarbon substituted beta-mercaptopropionic acid.

2,462,634
CRANKCASE VENTILATOR FOR MOTOR VEHICLES
George Griffith, Ottawa, Ontario, Canada
Application January 19, 1946, Serial No. 642,340
2 Claims. (Cl. 123—171)



1. A crank case ventilator for a motor vehicle having a vented crank case and an oil filling pipe, a carburetor and an air cleaner communicating with the air inlet opening of the carburetor; an adapter insertable between the carburetor and the air cleaner having a port in the side thereof, a narrow lip extending into said adapter above said lateral port and for the width thereof, a stack insertable in the oil filling pipe normally closed except for a port therein and a hose joining the respective ports of said adapter and stack.

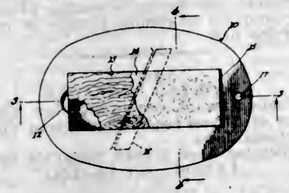
2,462,635
CYCLIC POLYMERIC ORGANOAMINOSILANES
Charles P. Haber, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 22, 1946, Serial No. 704,987
3 Claims. (Cl. 260—448.2)

1. Cyclic polymeric compositions corresponding to the general formula $[(CH_3)_2SiNH]_n$ where n is a whole number not more than 4 nor less than 3.

2,462,636
ALDEHYDE-(PHENOL-PHENOL ETHER REACTION PRODUCTS) REACTION PRODUCTS AND METHODS FOR PRODUCING THEM
Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application November 2, 1944, Serial No. 561,633
12 Claims. (Cl. 260—46)

1. A resinous organic condensation reaction product produced by heat reacting in the presence of a condensing agent a material selected from the group consisting of formaldehyde, paraformaldehyde, glyoxal, hexamethylene tetramine, trioxymethylene and furfuraldehyde with an organic condensation reaction product produced by subjecting a mixture of a phenol free of unsaturated hydrocarbon substituents and of the class consisting of hydroxybenzene, naphthol, anthranol and their homologues with an alkyl ether of a phenol having an unsaturated hydrocarbon substituent to a condensing reaction in the presence of a katenoid condensing agent.

2,462,637
SHARPENING DEVICE
William H. Haydon, Arlington, Va.
Application May 8, 1947, Serial No. 746,650
4 Claims. (Cl. 51—211)

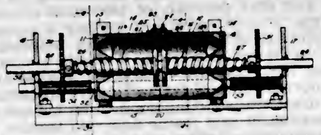


1. A sharpening device comprising, a base plate having a longitudinally extending recess therein terminating a substantial distance from the margins thereof, an abrasive member fitted firmly in said recess and extending above the top surface of the base plate, a handle member on the side of the base plate opposite to the recess adapted to be grasped by the fingers of the operator with the base plate extending over the operator's hand and wrist to shield them from accidental contact with a tool being sharpened.

2,462,638
CORROSION INHIBITING PROCESS
Harry C. Hetherington, Charleston, W. Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 15, 1945, Serial No. 578,131
7 Claims. (Cl. 202—57)

1. In a process for preventing corrosion of metals during distillation of hydrogen cyanide from an aqueous solution of hydrogen cyanide, ammonium salts and sulfuric acid, obtained by scrubbing formamide decomposition products with dilute sulfuric acid containing from 1% to 3% by weight of sulfuric acid, the step which comprises contacting a distillation vessel made of steel having a chromium content of 16% to 23%, and a nickel content of 7% to 11%, with the said aqueous solution having dissolved therein from 0.0005% to 0.10% of copper in ionizable form, based on the weight of the said aqueous solution, whereby substantial corrosion of the said steel is prevented.

2,462,639
HIGH-FREQUENCY RESONATOR
Merle R. Hubbard, Cedar Rapids, Iowa, assignor to Collins Radio Company, a corporation of Iowa
Application March 2, 1944, Serial No. 524,699
11 Claims. (Cl. 178—44)



1. A high frequency electrical resonator, including: an outer electrically conducting member having an inner surface formed as a surface of revolution about a certain axis; electrically conducting means closing at least one end of said member; an inner electrically conducting helical member concentric with said axis, the inductance of said helical member being a component of the electrical resonator; and a member movable with respect to the inner helical member to short out turns thereof for varying the inductance thereof, movement into the helical member lessening the inductance thereof.

6. A high frequency electrical resonator, including: an outer electrically conducting member having an inner surface formed as a surface of revolution about a certain axis; an electrically conducting circular end member closing an end of said outer member; and an inner electrically conducting member concentric with said axis and having one end thereof directly connected to the center of said end member, the end member having an annular groove in the inner surface thereof intermediate said inner and outer members, the construction and arrangement being such that all changes of direction in said inner surface are substantially greater than right angles.

2,462,640
METHOD OF MAKING METHYL SILOXANES
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application April 17, 1944, Serial No. 531,498
1 Claim. (Cl. 260—448.2)

The method which comprises hydrolyzing a mixture consisting of methyltriethoxysilane and trimethylethoxysilane in approximately equimolecular proportions, dehydrating the hydrolysis product and recovering the copolymeric methylsiloxane thereby produced.

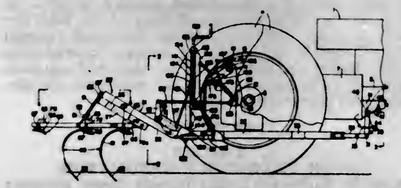
2,462,641
FIELD CULTIVATOR
William A. Hyland, Horicon, Wis., assignor to

means for loading said spring, an abutment for limiting opening movement of the valve, means for adjusting said abutment to lock the valve on

gaging said side pieces, the remaining side edge portions of said plate being inturned and doubled upon themselves to form a pair of spaced paral-

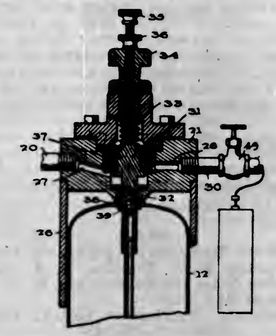
formed in the body about the bore; a valve member movably supported in the bore; a seat-engaging portion on the member; a spring constructed and arranged to urge the member to

2,462,641
FIELD CULTIVATOR
William A. Hyland, Horicon, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin
Application July 7, 1944, Serial No. 543,809
16 Claims. (Cl. 97—47)



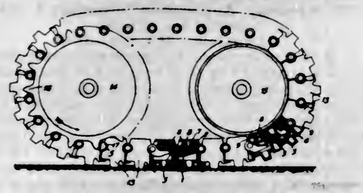
1. An agricultural machine comprising the combination with a farm tractor of a field cultivator including a generally fore and aft extending frame having ground working tools at the rear thereof and rearwardly of the rear of the tractor, and mechanism connecting both the front and rear portions of said field cultivator with the tractor, means including a generally fore and aft shiftable connection between the front portion of said frame and said tractor for limiting the generally vertical movement of the front portion of said frame relative to the tractor, a draft transmitting connection between the rear portion of said frame and said tractor, and means connected with said draft transmitting connection and acting against the tractor for raising and lowering the rear portion of said frame in accordance with the magnitude of the draft transmitted by said draft transmitting connection.

2,462,642
APPARATUS FOR FILLING CONTAINERS OF PRESSURE FLUIDS
Eugene W. Jacobson, Oakmont, Harry O. Creassi, Penn Township, Allegheny County, and John R. Aikins, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application March 11, 1946, Serial No. 653,666
5 Claims. (Cl. 62—1)



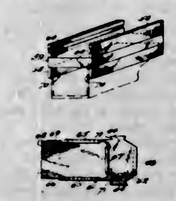
2. An apparatus for filling containers with measured volumes of high vapor pressure liquid, comprising a cylinder and a fluid operated piston discharging the liquid in measured quantities to a filling head, a plunger valve for the outlet of the filling head, a spring bearing thereagainst for normally holding the valve on its seat, adjustable means for loading said spring, an abutment for limiting opening movement of the valve, means for adjusting said abutment to lock the valve on its seat, and a valve controlled port in said filling head communicating with a closed receptacle to which successive charges of the liquid with entrapped air may be conveyed when the said plunger valve is locked on its seat, in order to purge the apparatus of air preparatory to dispensing measured volumes of the liquid yet to permit recovery of the liquid so discharged with the air.

2,462,643
ENDLESS TRACK FOR VEHICLES
Philip Henry Johnson and Leonard William Tripp, Hounslow, England, assignors to Roadless Traction Limited, Hounslow, Middlesex, England
Application March 4, 1946, Serial No. 651,792
In Great Britain December 21, 1944
4 Claims. (Cl. 305—10)



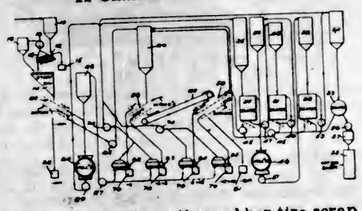
1. An endless track comprising a plurality of pairs of links, abutment surfaces formed on the links so that the abutment surfaces of the links of a pair coact by mutual engagement as the track is laid on the ground to prevent reverse curvature, a member projecting from a surface of at least one link of a pair and upon which the abutment surface of said link is formed, a tubular encasement of resiliently deformable material surrounding the said member and bearing at one end on the surface from which said member projects and having a seating at the other end around the abutment surface of the other link of the pair.

2,462,644
MORTAR SPREADER
Tsuchinojo Kimura, Mountain View, Calif., assignor of fifteen per cent to Byron Ver Ploeg, Oskaloosa, Iowa
Application April 5, 1946, Serial No. 659,771
1 Claim. (Cl. 72—128)



A mortar spreading apparatus comprising in combination, a matrix adapted for positioning upon the work and including a pair of spaced parallel side pieces, a spreader comprising a substantially upright plate positioned between said side pieces, said plate including a work-contacting lower edge portion, a handle provided at the upper edge of said plate, a pair of laterally projecting ears formed at the side edges of said plate adjacent said upper edge, said ears slidably engaging said side pieces, the remaining side edge portions of said plate being inturned and doubled upon themselves to form a pair of spaced parallel guide channels, a panel slidably positioned in said channels, the lower edge portion of said panel being retractably projectable beyond said work-contacting edge portion, and a hand grip provided at the upper edge of said panel.

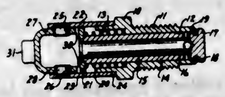
2,462,645
METHOD OF TREATING RUBBER SCRAP
Thomas M. Knowland, Belmont, Mass., assignor to Boston Woven Hose and Rubber Company, Cambridge, Mass., a corporation of Massachusetts
Application July 10, 1945, Serial No. 604,224
12 Claims. (Cl. 241—24)



12. A method of treating rubber tire scrap and the like to separate the rubber and fabric components and further separate the rubber components into tread and carcass rubber fractions, which consists in mechanically reducing a coarse portion of the scrap to a finer mixture of rubber-fabric particles, beating the resulting product further to free the rubber and fabric components, screening the beaten product to separate therefrom two fractions consisting respectively of (1) rubber and a high percentage of fabric and (2) rubber and a small percentage of fabric, screening the (2) fraction to separate therefrom a plurality of portions of predetermined graded mesh sizes including a relatively coarse tread rubber portion intermingled with fibres and a finer carcass rubber portion intermingled with fibres, treating said tread and carcass rubber portions independently by air flotation and gravity to separate rubber therefrom, further beating and screening the (1) fraction to free and separate rubber therefrom, further reducing, beating and screening the remainder left of the first and second named beaten products, after said separation of rubber therefrom, further to separate the rubber from the fabric, and finally treating including screening the rubber-containing portion of all the resulting products from the last named beating and screening to air flotation and gravity to separate the rubber and fabric-containing components, said air flotation and gravity treatment being characterized by the supporting of said portion of the products on an inclined foraminous deck while simultaneously directing air upwardly therethrough against the product and reciprocating the deck in a manner causing the heavier particles to travel upwardly thereon relative to the lighter particles, thereby separating therefrom the relatively free rubber.

2,462,646
FLUID VALVE
Gustave J. Koehler, Los Angeles, Calif.
Application June 30, 1944, Serial No. 542,932
5 Claims. (Cl. 251—132)

5. In a fluid valve, the combination of a valve body having a bore therethrough; a conical seat formed in the body about the bore; a valve member movably supported in the bore; a seat-engaging portion on the member; a spring constructed and arranged to urge the member to closed position to retain the seat-engaging portion in yielding engagement with the conical seat; symmetrical uprights supported by the valve body; alined trunnions supported by the uprights; a valve-operating element having symmetrical camming extensions formed thereon, which cooperate with the valve member, said extensions having alined holes which freely engage the trunnions to pivotally mount said operating element between the uprights; and symmetrical finger pieces formed on the operating element for moving it in either of two directions to cause the camming extensions to move the valve member to open position to disengage the seat-engaging portion from the conical seat, said camming extensions constructed and arranged to be effective to retain the valve member in open position, and said finger pieces constructed and arranged to be effective to limit the opening movement of the operating element.



2,462,647
ANGLE DRILL
Charles A. Koza, Pittsburgh, Pa.
Application April 21, 1948, Serial No. 22,361
6 Claims. (Cl. 74—416)

1. An angle drill comprising, in combination, a tubular housing having a tubular angular extension at one end thereof, a spindle rotatably mounted in said tubular housing, a second spindle rotatably mounted in said extension, a bevel gear extending from each of said spindles so as to mesh with each other at the juncture between said tubular housing and its extension, an anti-friction spherical surface provided on the adjoining faces of each of said gears, an adjusting screw threaded transversely into the juncture between said housing and its extension, and an end thrust element having angularly disposed faces held against said spherical surfaces by said adjusting screw.

2,462,648
HOBBYHORSE
Herbert Kuppin, Piqua, Ohio
Application February 6, 1946, Serial No. 645,892
4 Claims. (Cl. 272—53)

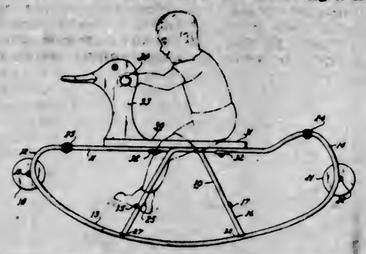
2. A rocking toy, comprising in combination, two opposed rockable body members attached together, the said body members having front and rear wheels and a stirrup portion therebetween, each of the body members formed of a single length of metal bent to form a horizontal top portion, inclined front and rear end portions, a curved bottom portion and a lateral stirrup por-

tion, and a saddle member mounted on the body member, the said saddle member having a head

2,462,652
ROTARY CONVERTER-COUPLING HYDRAULIC POWER TRANSMISSION

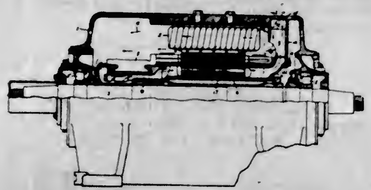
connecting the arbor to said shaft, a support in which the arbor is journaled mounted for rotative adjustment about the axis of the drive shaft, a rotary cam removably supported for operation

tion, and a saddle member mounted on the body member, the said saddle member having a head



portion including a handle bar and being adjustably movable on the body member.

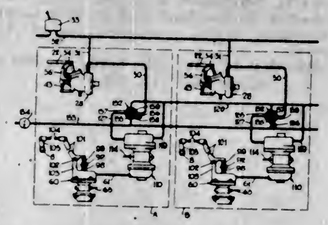
2,462,649
COOLING ARRANGEMENT FOR DYNAMO-ELECTRIC MACHINES
Carl W. Lange, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application April 8, 1947, Serial No. 740,199
6 Claims. (Cl. 171—252)



1. A dynamoelectric machine comprising, a totally enclosed stator frame, field exciting coils positioned within said frame, an armature mounted for rotation therein, an air circulating fan positioned at one end of said armature for rotation therewith, a plurality of radially extending air passages in said fan each having a centrally located air inlet and a peripherally located air outlet therein, a closed annular chamber formed in the internal surface of said frame coextensive with and communicating directly with said peripheral outlets of said fan, and means including a close fit between said closed annular chamber and said fan to provide a substantially closed circuit for ventilating medium from said fan to said annular chamber and back to said fan, a second air discharge port in said fan communicating with said radial passages and disposed inwardly towards the center of said fan and toward said armature, whereby compression of cooling medium and resultant heat dissipation may be obtained in said chamber and expansion of cooling medium and resultant cooling may be obtained at said second air discharge port.

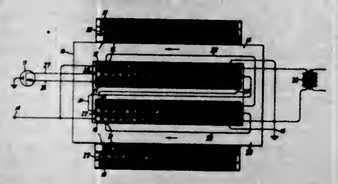
2,462,650
MULTIPLE ENGINE OUTPUT EQUALIZING APPARATUS
Arthur G. Larson, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 5, 1946, Serial No. 652,151
5 Claims. (Cl. 60—97)

5. A control system for equalizing the power output of a plurality of prime movers comprising an equalizing pipe extending to all of said prime movers, power control means for each prime mover, a fluid pressure controlled motor for each prime mover operable to effect operation of the respective power control means to vary the power output of the prime mover in proportion to the pressure of controlling fluid, fluid pressure regulating means for each prime mover operable by the respective power control means to provide fluid at a pressure proportional to the power output of the respective prime mover, and means at each prime mover including



a selector valve having a master control position for providing a chosen pressure of fluid in the respective fluid pressure motor and for at the same time rendering the pressure of fluid in said equalizing pipe variable in accordance with variations in pressure of fluid delivered by the respective fluid pressure regulating means, and having a second position for rendering pressure of controlling fluid in the respective motor variable in accordance with the differential between the pressures in said equalizing pipe and delivered by the respective pressure regulating means.

2,462,651
ELECTRIC INDUCTION APPARATUS
Harold W. Lord, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 12, 1944, Serial No. 539,975
12 Claims. (Cl. 171—119)

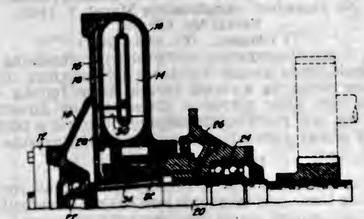


4. An electric induction apparatus including a core having first and second winding legs, first and secondary primary winding sections, first and second secondary windings each having first, second, and third winding sections, one of said primary winding sections and said first section of said first secondary winding surrounding one leg, said second primary section and said first section of said second secondary winding surrounding said second winding leg, said second sections of said first and second secondary windings surrounding said second core winding leg, and said third sections of said first and second secondary windings surrounding said first core winding leg.

through an opening in said housing whereby, when said lever is engaged by an obstruction,

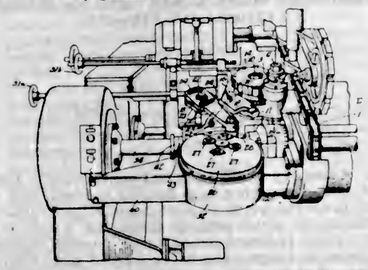
2,462,658
COMPOSITION COMPRISING AN AMIDE-ALDEHYDE RESIN AND AS A PLASTICIZER A POLYESTER OF A DIHYDRIC ETHER OF

2,462,652
ROTARY CONVERTER-COUPLING HYDRAULIC POWER TRANSMISSION
Alf Lyaholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application August 25, 1943, Serial No. 500,008
6 Claims. (Cl. 60—54)



1. A hydraulic transmission of the closed circuit type comprising a driving member carrying a ring of substantially radially disposed pump blades, a driven member carrying a ring of substantially radially disposed turbine blades to which the pump blades directly discharge fluid in normal forward operation of the device and a reaction member carrying a ring of guide blades to which said turbine blades directly discharge fluid, said guide blades having an acute outlet angle and having profiles including relatively thick and bluntly rounded inlet portions shaped to provide channels for smooth flow in the inlet portions of the channels of liquid delivered thereto within a range of inlet angles varying from substantially radial when the turbine blades are at stall to an angle substantially the same as said outlet angle when the speed of the turbine blades approaches that of the pump blades, and said profiles further providing therebetween relatively straight channels for substantially undeflected flow of the liquid through the reaction member under the latter conditions of operation.

2,462,653
SHAPING ATTACHMENT FOR TENONING MACHINES
Judson H. Mansfield, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a corporation of Illinois
Application September 28, 1943, Serial No. 504,120
7 Claims. (Cl. 144—142)

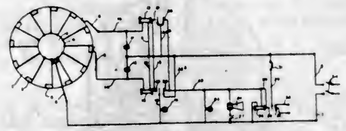


1. In a shaping machine which includes work-feeding means arranged to support and propel a work-piece along a predetermined path, a rotary cutter, and an arbor therefor, a drive shaft journaled parallel to said arbor with driving gears connecting the arbor to said shaft, a support in which the arbor is journaled mounted for rotative adjustment about the axis of the drive shaft, a rotary cam removably supported for operation in timed relation to said work-feeding means, a two-part lever pivoted on an axis which is in fixed relation to said axis of the drive shaft, and a roller on said lever engaging the cam, whereby said cam controls the adjustment of the arbor and its cutter toward and from the path of the work-piece, the portion of said lever which carries the roller being adjustable toward and from the cam and relative to the other part of said lever to accommodate the roller to different cams interchangeably employed.

2,462,654
TRIFLUOROMETHYLHEXACHLOROCYCLOHEXANE
Earl T. McBee, La Fayette and Lavon D. Bechtol, Indianapolis, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application June 15, 1946, Serial No. 677,082
1 Claim. (Cl. 260—648)

Trifluoromethylhexachlorocyclohexane.

2,462,655
SPEED INDICATING DEVICE
Loren C. McHenry, Rivermines, Mo.
Application June 19, 1946, Serial No. 677,699
2 Claims. (Cl. 177—311)



1. Means indicating subnormal speed of a machine comprising a movable device having a plurality of electrical contact segments thereon mechanically connected and driven in synchronism with said machine, brushes positioned to alternately make and break contact with said segments as said device is moved, circuits connected to said brushes respectively, and controlled by said segments, relays connected in and energized by said circuits, condensers connected in the circuits, respectively, in parallel with said relays and proportioned to keep said relays energized when said machine is moving at normal speed but permitting said relays to become deenergized when said speed drops below normal, a circuit controlled by the relays, and a signaling device controlled by said circuit.

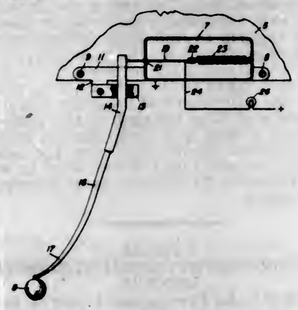
2,462,656
CURB LINE INDICATOR FOR AUTOMOBILES
Alphonso D. McLendon, Palo Alto, Calif.
Application February 20, 1948, Serial No. 9,674
1 Claim. (Cl. 200—52)

A curb approach indicator device comprising a supporting elongated housing for attachment to the fender of a vehicle, a bracket carried by said housing, a flexible support mounted on said bracket, an obstruction-engaging lever carried by said flexible support and having its upper end extending above said flexible support and into alignment with the end of said housing, a rod connecting the upper end of said lever to a spring positioned in said housing, said rod passing

2,462,661
FLUIDIZATION PROCESS FOR PRODUCING ALUMINUM
John C. Munday, Cranford, N. J., assignor to

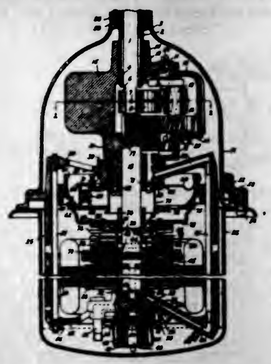
2,462,663
STABILIZATION OF OLEAGINOUS MATERIALS
Frank A. Norris, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware

through an opening in said housing whereby, when said lever is engaged by an obstruction,



said rod will be moved against the side of the opening in said housing to effect a signalling action.

2,462,657
CLUTCH AND BRAKE MECHANISM
Jacob W. McNairy, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application December 8, 1945, Serial No. 633,632
2 Claims. (Cl. 192—18)



1. In a washing machine or the like, the combination of a driven shaft, a driven brake and clutch member, axially yieldable arms connecting the driven brake and clutch member to the driven shaft, a brake ring, spring means opposing axial movement of said driven brake and clutch member which holds it in engagement with the brake ring, a driving shaft, a second clutch member, an axially expansible corrugated bellows connected at one end to said second clutch member and at the other end to said driving shaft, a fluid pump driven by the driving shaft for supplying fluid pressure to said bellows to effect expansion of the bellows to bring said second clutch member into engagement with said brake and clutch member to close the clutch and move the brake and clutch member axially from engagement with the brake ring, a discharge port for the bellows, a centrifugally operated valve for closing said port when the driving shaft speed reaches a predetermined high value, and means controlling the flow of fluid from the discharge side of the pump to the bellows.

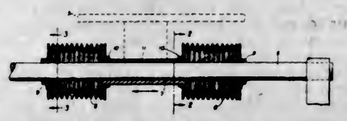
2,462,658
COMPOSITION COMPRISING AN AMIDE-ALDEHYDE RESIN AND AS A PLASTICIZER A POLYESTER OF A DIHYDRIC ETHER OF PROPYLENE GLYCOL AND A DICARBOXYLIC ACID
Eugene W. Moffett, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application March 7, 1946, Serial No. 652,805
17 Claims. (Cl. 260—31.4)

1. A plasticized resin composition comprising a formaldehyde amine condensation product, the amine including a single carbon atom having at least two basic nitrogen atoms joined directly thereto, said resin composition containing a polyester of (a) a dihydroxy alcohol of the formula

$$HOR_1—O—R_2OH$$

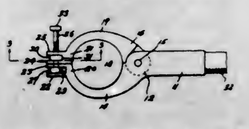
in which R_1 and R_2 are hydrocarbon radicals containing three carbon atoms and (b) a dicarboxylic acid containing six to nineteen carbon atoms.

2,462,659
HERMETICALLY SEALED, SELF-LUBRICATING SLIDE BEARING
George C. Molotsak, Coaldale, Pa.
Application April 7, 1947, Serial No. 739,897
3 Claims. (Cl. 308—5)



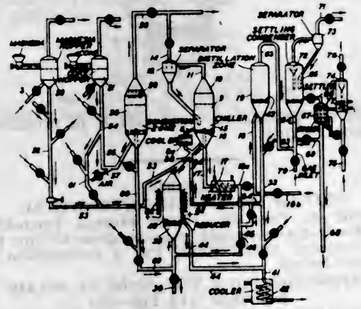
1. The combination with a stationary guide rod, and a bearing sleeve reciprocable thereon, of a metal bellows hermetically sealing each end of said bearing sleeve to the guide rod and containing a quantity of lubricant, each bellows having a fluid-tight connection at its outer end with the guide rod and at its inner end with the adjacent end of the bearing sleeve, whereby, upon reciprocation of the bearing sleeve, the bellows will alternately force the lubricant therefrom to and between said guide rod and said bearing sleeve.

2,462,660
BATTERY CABLE CLAMP
James Calvin Moore, Wichita, Kans.
Application March 5, 1946, Serial No. 652,055
2 Claims. (Cl. 173—259)



1. A battery cable terminal comprising a fixed jaw and a coacting jaw hinged thereto, one of said jaws having a pair of registering terminal arms, one of which arms is apertured, a bolt having an enlargement on one end thereof inserted betwecn said arms, the other of said jaws having a pair of arms with apertures therein to receive said bolt and having a nut therebetween operatively associated with a threaded portion of said bolt to cause the opening and closing of said jaws when said bolt is turned.

2,462,661
FLUIDIZATION PROCESS FOR PRODUCING ALUMINUM
John C. Munday, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 27, 1946, Serial No. 657,512
4 Claims. (Cl. 75—26)



1. A process for producing aluminum which comprises continuously passing a fluidized mixture of alumina and carbon through a reduction zone wherein a reducing temperature is maintained and aluminum is vaporized, rapidly chilling the effluent vapor product containing the reduced aluminum and carbon monoxide by the addition thereto of a coolant consisting of fluidized alumina, separating the bulk of the carbon monoxide from the chilled material, distilling off the aluminum and passing the distillation residue consisting of alumina to the reduction zone.

2,462,662
STOPE JACK
Thomas J. Nicoley, Tonopah, Nev.
Application October 10, 1947, Serial No. 779,052
2 Claims. (Cl. 248—351)

1. A jack structure adapted to take the place of a conventional wooden cross-timber which is usually employed in building mine stopes comprising a rigid open ended tube of a predetermined length and predetermined cross sectional diameter, duplicate jack units fitted removably into the opposite open ends of said tube, each unit comprising a cylindrical bushing having an outside diameter corresponding to the inside diameter of said tube, said bushing fitting snugly, telescopically and firmly into the adjacent end portion of the tube and being of a length in relation to the length of the tube to extend a substantial distance into said tube to fill and reinforce the coacting end portion of the tube, said bushing having a central bore and said bore screw threaded, the outer end of said bushing, immediately beyond the corresponding end of said tube being enlarged and having flat faces formed into a tool nut, a jack screw threaded into said bore, the outer end of said jack screw having a head projecting beyond the tool nut and the wall contacting surface of said head being roughened.

2,462,663
STABILIZATION OF OLEAGINOUS MATERIALS
Frank A. Norris, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application December 1, 1944, Serial No. 566,243
9 Claims. (Cl. 99—163)

4. A process of stabilizing an oleaginous material of animal origin which comprises incorporating therein, not substantially in excess of .1 per cent of each of a compound containing an enediol group, p-amino-benzoic acid, and caffeic acid.

2,462,664
STABILIZATION OF OLEAGINOUS MATERIALS
Frank A. Norris, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application December 1, 1944, Serial No. 566,244
18 Claims. (Cl. 99—163)

2. A composition of matter comprising an oleaginous material of animal origin containing, and being stabilized against the development of rancidity by, not substantially in excess of .1 per cent of each of a compound containing an enediol group, and a compound selected from the group consisting of gallic acid and its lower aliphatic esters.

2,462,665
ALLOY
Eugene L. Olcott, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application April 11, 1946, Serial No. 661,358
2 Claims. (Cl. 75—126)

1. A heat-treatable alloy containing 0.17% to 0.25% carbon, 0.3% to 0.6% silicon, 1% to 1.5% manganese, 11.5% to 13% chromium, 2.5% to 3.5% tungsten, 0.2% to 0.28% vanadium, 4.5% to 5.5% cobalt with the remainder substantially all iron.

2,462,666
ARTICULATED RAILWAY VEHICLE
Alejandro Goicoechea Omar, Madrid, Spain, assignor to Patentes Talgo, S. A., Madrid, Spain
Application April 12, 1946, Serial No. 661,699
In Spain September 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 30, 1963
19 Claims. (Cl. 105—4)

1. An articulated railway vehicle consisting of a plurality of pairs of wheels, a plurality of rigid sections each having its rear end mounted on one pair of wheels and each having a length of between three and six times the gauge of the pairs of wheels, and integrating connections between the sections formed to positively hold adjacent ends of adjacent sections in alignment while permitting free relative turning of the sections in a horizontal plane.

2,462,667
EVER-READY RIGID TOP FOR CONVERTIBLE AUTOMOTIVE VEHICLES

which comprises catalyzing the activity of said gaseous reactant by illuminating it with the light

ment having a chimney and removably mounted in an operative position with an end of said chimney adjacent an end of said flue, a member co-

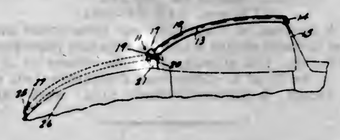
EVER-READY RIGID TOP FOR CONVERTIBLE AUTOMOTIVE VEHICLES
Alfred C. O'Neal, Andalusia, Ala.
Application August 19, 1946, Serial No. 691,511
1 Claim. (Cl. 296—107)



An ever ready rigid top for a convertible automotive vehicle having a windshield, a passenger compartment and a rear compartment, comprising; an arcuately formed top uniform in cross-section throughout its length and including means for releasably securing the forward end to the top of the windshield, a bracket spanning said top, and a bearing mounted on each side of said rear compartment and pivotally supporting the respective ends of said bracket, said bracket having a depending leg at each end and a roller mounted on the inside of each leg, with said top retained within said bracket and supported and movable in either direction on said rollers, and holding means located on the rearward end of said rear compartment for securing the rearward end of said top when moved to its most rearward position, and with said bracket securing the rearward end when the top is in its most forward position, whereby said top is slidable through said bracket and retained therein in any position and hinged at its forward end to permit unrestricted opening of the rear compartment when the top is in its most rearward position over the compartment, and movable over the passenger compartment at will to be secured to the top of the windshield.

2,462,668
CONDENSATION PRODUCTS OF PENTAERYTHRITYLTETRAMINE WITH BETA-DIKETONES AND BETA-HYDROXY METHYLENE KETONES
Charles J. Pedersen and Frederick Baxter Downing, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 30, 1947, Serial No. 745,112
5 Claims. (Cl. 260—566)

1. A compound of the formula

$$\left(\begin{array}{c}H-O-C=C-C=N-CH_2- \\ \quad\;\; X \;\; Y \;\; Z \qquad\qquad\end{array}\right)_4 C$$

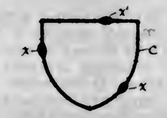
wherein each of X and Y represents a member of the group consisting of hydrogen and hydrocarbon radicals and Z represents a hydrocarbon group.

2,462,669
PROCESS AND APPARATUS FOR PHOTOCATALYTIC REACTIONS
Joseph Henry Percy, New York, N. Y., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
Application February 3, 1942, Serial No. 429,374
13 Claims. (Cl. 204—162)

7. In the photocatalytic reaction of a gaseous reactant with another material, the improvement which comprises catalyzing the activity of said gaseous reactant by illuminating it with the light

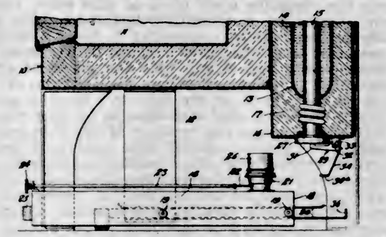
from the gaseous reactant excited to produce a discharge glow.

2,462,670
SHIP OF MONOLITHIC STRUCTURE
Joseph N. Pew, Jr., Lower Merion Township, Montgomery County, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application July 6, 1945, Serial No. 603,480
9 Claims. (Cl. 114—79)



8. A ship comprising a shell composed of a multiplicity of main conventional metal sections relatively non-resistant to extension of cracks and spaced-apart special metal sections each inserted between two main sections, adjacent sections being integrally united by welding along their adjacent edges to form a monolithic structure, each special section being, along its longitudinal central part, of substantially greater thickness than the thickness along its edges and the thickness of the adjacent main sections, said relatively thick central portions comprising at least three metal layers of which at least the outer layers are integral with the metal of the special section adjacent the edges thereof that are integrally united with contiguous main sections.

2,462,671
FLUE CONNECTOR ASSEMBLY FOR ABSORPTION REFRIGERATORS
Clifford D. Pfender, Albert Schultze, and Carl J. Knerr, Evansville, Ind., assignors to Servel, Inc., New York, N. Y., a corporation of Delaware
Application July 15, 1947, Serial No. 761,016
5 Claims. (Cl. 62—1)

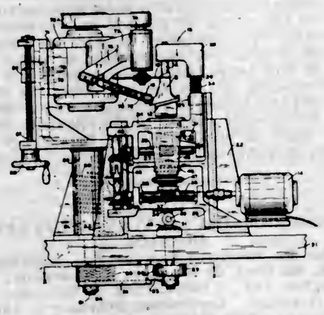


1. In a refrigerator having a heat-receiving element provided with a flue, a heater for said element having a chimney and removably mounted in an operative position with an end of said chimney adjacent an end of said flue, a member coacting with said flue and chimney and movable relative to both the flue and the chimney to and from a position connecting the adjacent ends of the flue and the chimney, and mechanism to so move said member and operative responsive to movement of said heater to and from said operative position.

2,462,672
BAKER'S PEEL
Louis Portner, Margate City, N. J.
Application March 31, 1948, Serial No. 18,120
4 Claims. (Cl. 107—67)

1. A baker's peel for holding and turning Kaiser rolls, comprising a blade and handle extending therefrom, a plurality of superimposed vanes pivotally mounted on the blade, means inter-connecting the said vanes, and means connected with one of said vanes to elevate all of said vanes when operated, whereby the preshaped dough placed on said vanes will simultaneously be turned from bottoms-up to bottoms-down position.

2,462,673
APPARATUS FOR TURNING WOOD HEELS
Justin P. Quirk and Ludwig G. P. Hafner, St. Louis, Mo., assignors to United Wood Heel Company, St. Louis, Mo., a corporation of Delaware
Application December 29, 1947, Serial No. 794,218
8 Claims. (Cl. 12—42)

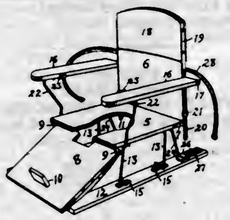


1. In a wood heel turning machine, having a tool for shaping a heel while its blank is rotated, a jack for holding the heel blank, and means for rotating the jack, the combination comprising a cam driven by said means, a second tool for operating on said blank, and mechanism under the control of said cam for moving the second tool into engagement with the blank.

2,462,674
CHEMICAL PLASTICIZERS OR SOFTENERS FOR BUTYL RUBBER
John Rehner, Jr., Westfield, and Paul J. Flory, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 22, 1943, Serial No. 507,302
4 Claims. (Cl. 260—29.1)

1. In the processing of a high molecular weight copolymer prepared by the steps of mixing together a major proportion of isobutylene with a minor proportion of a polyolefinic monomer having from 4 to 10 inclusive carbon atoms per molecule, cooling the mixture to a temperature within the range between —40° C. and —127° C. and polymerizing the cold mixture by the application thereto of a Friedel-Crafts catalyst dissolved in a low-freezing, non-complex-forming solvent; the copolymer being characterized by an iodine number within the range between 0.5 and 50; an actual molecular weight between 120,000 and 3,000,000, and reactivity with sulfur in a curing reaction; the steps in combination of milling into the polymer a portion of a cyclic carbon ring peroxide having from 10 to 14 inclusive carbon atoms per molecule and at least two coupled oxygen atoms in the molecule in a proportion within the range between 0.05% and 5% of the polymer; and thereafter continuing the milling of the polymer to improve the plasticity by a substantial amount.

2,462,675
CONVERTIBLE CHAIR FOR INFANTS
Robert F. Reiman, Fort Wayne, Ind.
Application August 4, 1947, Serial No. 765,883
6 Claims. (Cl. 155—31)



1. A child's folding chair in which is included base bars, a toilet seat provided with legs hingedly connecting said bars and toilet seat, braces hingedly connected with the toilet seat and removably secured to said base bars and adapted to be folded forwardly under the toilet seat, a back rest hingedly connected with the rear end of the toilet seat, and having latched connection therewith when in unfolded position, arm rests having pivotal connection with said back rest, links connecting said arm rests with said seat, a cover hingedly connected to the front end of said seat, adapted to be folded backwardly thereon to conceal same, and provide a foot rest when unfolded, a tray having slotted extending arms disposed loosely between the arm rests and the back rest having sliding movement on the pivotal supports therefor, stops on said arm rests adapted to limit movement of said arms in one direction, and stirrups on said back rest for the reception of said arms when the tray is positioned on the back rest.

2,462,676
BOTTLE CARTON
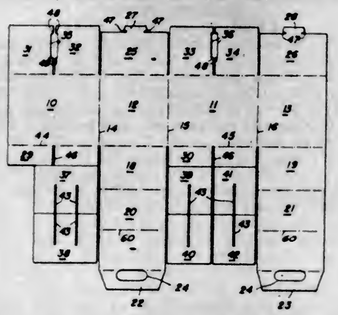
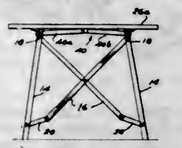
Melvin A. Riley and Donald C. McClelland, Baltimore, Md., assignors to The Baltimore Paper Box Company, Baltimore, Md.
Application April 16, 1946, Serial No. 662,570
6 Claims. (Cl. 229—52)



1. A carton of the character described provided with first and second pairs of opposite walls, a pair of top flaps hingedly connected with the upper end of each wall of the first pair of walls, a double divider arranged in the carton and having hand hole flaps projecting upwardly between and above the top flaps, said hand hole flaps being adapted to lie flat on said top flaps or to extend upwardly side-by-side perpendicular to said top flaps, and other top flaps hingedly connected to the upper ends of the walls of the second pair of walls, overlying the first-mentioned top flaps and provided with tabs adapted to extend downwardly through the holes of the hand hole flaps and to interlock with the first-mentioned top flaps.

2,462,677
FOLDING TABLE
Charles H. Roberts, Roscoe, Calif.
Application March 19, 1946, Serial No. 655,516
1 Claim. (Cl. 311—89)



A table comprising a table top and a foldable frame including horizontal rails adapted to support said top, said rails being pivotally attached to said frame at their one end and being supported upon a pin extending from said frame at the other of the ends thereof, said rails being provided with openings, there being a smaller opening forming a recess at one side of each of said first named openings, and studs, said studs being dependent upon the under-side of said table top, said studs, openings and recesses being shaped so that the studs can enter the said openings and move laterally thereof into said recesses, and means to lock said studs into said recesses, said means comprising pairs of brace members hinged together at their inner ends and being fulcrumed upon and being adapted to move through points of medial longitudinal alignment whereby upon being moved upwardly through said point of alignment said braces expand said frame and rails in sufficient degree to force said rails laterally relative to said studs whereby said studs enter said recesses and are held in such position, said studs being formed with flanged heads shaped to over-hang said recesses whereby upon being brought in co-operative relationship said studs and associated table top cannot be lifted from said frame by vertically applied pressure.

2,462,678
CATALYSTS FOR POLYMERIZING OLEFINS
Milton J. Roedel, Talleyville, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 9, 1944, Serial No. 548,797
7 Claims. (Cl. 260—94)

7. In a process for the polymerization of a monoolefin containing not more than 4 carbon atoms at a temperature between 60 and 400° C. and under a pressure between 4 and 3000 atmospheres, the step which comprises conducting the reaction with an oxime as the catalyst.

2,462,679
RAINPROOF HEADWEAR
Ila E. Rosenau, Seattle, Wash.
Application September 13, 1946, Serial No. 696,804
2 Claims. (Cl. 2—175)

1. Rain headwear including a top covering or hat constructed of flexible, waterproof fabric and comprising a central crown sheet adapted to conform to the shape of the top of the head and a plurality of overlapping radially arranged independent petal portions secured at their inner ends to said crown sheet and covering the same and extending therebeyond to cover the top of the head and to afford ventilation and a detachable cowl constructed of light, flexible, waterproof material and means for detachably connecting said cowl to the rear portion of said crown sheet.

2,462,680
POLYMERS FROM ETHYLENE AND CARBON DIOXIDE
Donald E. Sargent, Easton, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 5, 1946, Serial No. 645,655
6 Claims. (Cl. 260—94)

1. A process for the preparation of carbon dioxide-modified polymers of ethylene which comprises heating ethylene and carbon dioxide, in a weight ratio of ethylene to carbon dioxide between 0.5:1 to 5:1, at a temperature between 50 and 300° C. and a pressure above 100 atmospheres in the presence of a free radical-producing catalyst.

uniform height running around the inside of the said frame, the top of said strips being below the top of said frame to act as a stop and rest for a laced frame or box spring, a central member at-

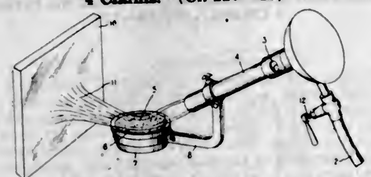
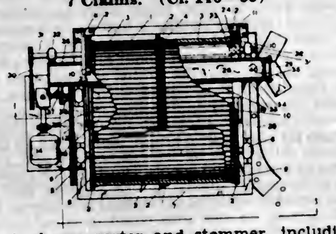
METHOD OF FORMING GERMANIUM FILMS
Vincent J. Schaefer, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 3, 1947, Serial No. 758,761
4 Claims. (Cl. 117—46)



1. The method of forming a coating of germanium on a solid surface which comprises bringing the reducing portion of a low velocity gas flame into contact with a mass of germanium oxide and bringing the tip of said flame into contact with the surface to be coated.

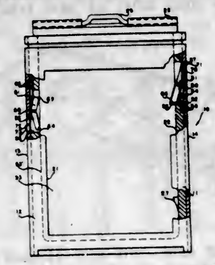
2,462,682
CHERRY STEMMING AND SORTING MACHINE
Homer M. Schubert, Salem, Oreg.
Application May 24, 1946, Serial No. 672,090
7 Claims. (Cl. 146—55)



1. A cherry sorter and stemmer, including a frame, an endless driven conveyor moving in the frame and moving in a path defining substantially parallel straight portions and curved end portions, and slats connected to and projecting inwardly of the conveyor with their adjacent sides during travel of the conveyor being spaced apart a distance to exclude entrance of a cherry and permit entrance of the cherry stem, the sides of the slats in the curved end paths of the travel of the conveyor moving into a path to grip any interposed cherry stem, means for feeding the stemmed cherries onto the straight portion of the conveyor to receive the stems of the cherries, said slats gripping the carried cherries' stems and supporting the connected cherries in moving in the curved path of travel of the conveyor; and means adjacent such path of travel of the conveyor for engaging and interrupting the movement of the carried cherries to separate the carried cherries and the slat-gripped stems.

2,462,683
PLATE HOLDER WITH SAFETY LOCK
Morris Schwartz and William Castedello, Stamford, Conn., assignors to The Kalart Company, Inc., Stamford, Conn.
Original application April 28, 1945, Serial No. 590,932. Divided and this application January 22, 1947, Serial No. 723,522
7 Claims. (Cl. 95—71)

1. Plate holder of the type described for photographic apparatus comprising two pivotal pawls mounted at opposite sides of the plate container of the holder, and a slide having two spaced notches at one of its sides, one of said pawls being constructed and positioned to coact with one of the notches for blocking slide movements in one direction, the other pawl being constructed and positioned to coact with the other notch for blocking slide movements in opposite direction, said pawls and notches being arranged to remain inoperative in response to a removal of a



slide inserted in a predetermined slide face position and upon reinsertion of the slide in the reversed slide face position, and to engage each other in response to an attempted reinsertion of the slide in the said predetermined slide face position for blocking such reinsertion, and also for locking a slide completely inserted in reversed slide face position, thereby preventing a removal of a reversed inserted slide without manipulation of the locking device.

2,462,684
STABILIZED INDENE AND ALKYL INDENE RESINS
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application June 20, 1944, Serial No. 541,261
6 Claims. (Cl. 260—82)

3. A new composition of matter comprising resinous polymer produced by the polymerization with the aid of a resin-producing catalyst of a light oil fraction obtained from the products of pyrolysis of petroleum oil selected from the group consisting of the indene fraction boiling preponderantly in the range of from 175 to 190° C. and containing indene as the preponderant unsaturated hydrocarbon present and a similarly derived methyl indene fraction boiling preponderantly in the range of 190 to 220° C. and containing methyl indene as the preponderant unsaturated hydrocarbon present; and from 0.1 to 10% by weight based on said polymer of an antioxidant stabilizing agent comprising a product resulting from the reaction of acetone with an aryl amine selected from the group consisting of aniline, p-amino diphenyl and diphenyl p-phenylene diamine; said resinous polymer in the absence of an antioxidant stabilizing agent being subject to considerable oxidation on prolonged contact with air at room temperature.

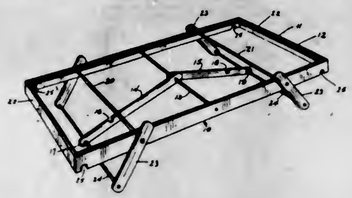
2,462,685
FOLDABLE COT
Paul Sproll, Long Island City, N. Y.
Application July 20, 1946, Serial No. 685,074
4 Claims. (Cl. 5—110)

1. In a folding cot of the character described, a rectangular frame of uniform size, strips of

2,462,689
INSECTICIDE DISPENSING DEVICE
Ernest A. Stretz, Compton, Calif.
Application August 3, 1944, Serial No. 547,931
1 Claim. (Cl. 119—159)

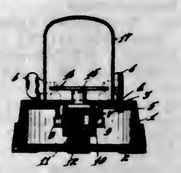
element to the line of action of the link is greater than the perpendicular distance from the pivotal mounting of the higher order carry element to said line of action.

uniform height running around the inside of the said frame, the top of said strips being below the top of said frame to act as a stop and rest for a laced frame or box spring, a central member attached at the central portion of the long sides of the said frame, supports pivoting in the central portion of said central member, said supports having notches adjacent the ends thereof and reverse notches spaced from said notches, circular rods adjacent the ends of said frame and passing through the long sides of said frame, legs on



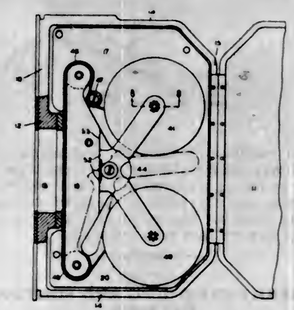
either side of said rods and pivoted upon the projecting ends of said rods, said legs having a circular rod attached between the ends of said legs, notches at the long sides of said frame and adjacent the ends thereof, whereby when said legs are pivoted against said frame, the rods between said legs fall within the notches in the ends of said frame and when said pivoted supporting members pivot upwardly the notches of said supporting members receive said circular rods adjacent the ends of said frame to provide a compact folding cot.

2,462,686
DICE AGITATOR
Ben W. Stallard, Cincinnati, Ohio
Application February 28, 1945, Serial No. 580,153
2 Claims. (Cl. 273—145)



2. A game device, comprising: a hollow base, a handwheel rotatively seated in the top of the base, having a plurality of wings extending radially therefrom to provide finger holds for manually rotating the handwheel and a hub axially extending from the lower side thereof within the base, the outer end of the hub formed with a series of cam teeth, a dice supporting tray above the handwheel having a headed shank axially extending from its lower side traversing said handwheel and axially reciprocable therein, with the head of the shank contacting the lower side of the handwheel to limit its movement, and a spring urged plunger within the base concentric with the hub of the handwheel with its head end contacting the head of the shank of the tray and having a pair of diametric lugs extending therefrom for cooperation with the cam teeth of the hub of the handwheel for depressing the plunger in the rotative movement of the handwheel and to abruptly release the same to deliver a percussive blow against the tray to tumble the dice thereupon.

2,462,687
FILM MAGAZINE
Robert J. Stava, University Heights, Ohio, assignor to Picker X-Ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 24, 1947, Serial No. 775,862
5 Claims. (Cl. 88—17)



3. In a roll film magazine comprising a chambered casing having two film spool spindles mounted therein with their axes parallel, one end of each spindle having a mounting connected with said casing, the combination of a securing member mounted to turn about and to move bodily along an axis parallel to but spaced from said spool spindles and provided with two arms, one arm for engaging the opposite end of each spindle, said securing member normally providing bearings for said spools and locking them in place but being adjustable by motion around and along its axis to release the spools and film for removal and replacement, means for so holding said securing member against accidental movement longitudinally of its own axis when in spool locking position, and stop means preventing rotation of said securing member about its axis when it is in spool locking position.

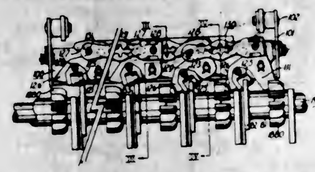
2,462,688
COVER HOLDER
Thomas P. Stone, Bay City, Mich.
Application June 24, 1946, Serial No. 678,750
1 Claim. (Cl. 24—87)

In a cover holder, a resilient wire rod forming a normally straight but bendable shank, a continuation of said rod at least at one end of said shank being arcuated and disposed in the normal plane of said shank so as to provide the first substantially semi-circular region of a circular cover-engaging eye-piece, the remaining region of said eye-piece being disposed in an upwardly inclined plane and overlapping the first region at a point adjacent the confluence of the first region with said shank, an end portion of said rod constituting a continuation of said remaining region being angulated to cross over the first region of the eye-piece and to extend downwardly therefrom at one side of said shank, said end portion terminating in an arcuate and pointed cover engaging prong.

2,462,689
INSECTICIDE DISPENSING DEVICE
Ernest A. Stretz, Compton, Calif.
Application August 3, 1944, Serial No. 547,931
1 Claim. (Cl. 119—159)

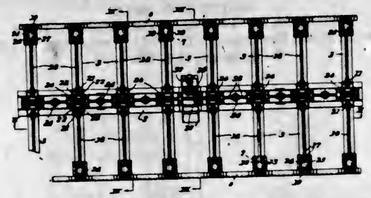
An insecticide dispenser for animals comprising a pair of separable interlocking hemispherical segments, one segment being externally threaded about its outer peripheral edge, the other segment being internally threaded about its inner peripheral edge for threadable engagement over the threaded portion of said first mentioned segment, an inwardly extending detent on the inner wall of one of said segments, a leaf spring attached to the inner surface of the other segment provided with an aperture through its free end adapted to resiliently engage and overlie said detent when said sections are threaded together to form a spherical body for containing an insecticide, a release button slidably disposed through the wall of the receptacle supporting the leaf spring engageable therewith for disengaging the same from said detent for permitting the unscrewing and separation of said hemispherical segments, one of said segments having insecticide dispensing apertures formed therethrough, and pivotal means adjacent said dispensing apertures for supporting said dispenser upon the body of an animal.

2,462,690
REVOLUTIONS COUNTER ACTUATOR
Clarence K. Studley, Jr., Berkeley, Calif., assignor to Marchant Calculating Machine Company, a corporation of California
Application June 3, 1946, Serial No. 674,100
6 Claims. (Cl. 235—137)



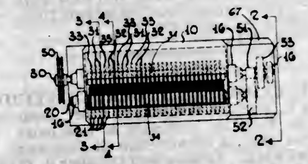
3. In a calculating machine having a revolution counter including a series of ordinally arranged numeral wheels each rotatable to positions indicative of the digits zero to nine inclusive and tens-carry mechanism between said wheels including, a series of ordinally arranged carry elements each operable to actuate its respective numeral wheel and each pivotally mounted for differential rocking movement of the same out of operative relationship with said numeral wheel, and means operable in accordance with the position of the immediate lower order numeral wheel to cause said rocking movement; in combination with, means for transmitting said rocking movement from one lower order carry element to the next higher order carry element including a link pivotally connected to said lower and higher order carry elements, the points of pivotal connection of the link to the respective carry elements being so located with respect to the points of pivotal mounting of the respective elements that the perpendicular distance from the pivotal mounting of the lower order carry element to the line of action of the link is greater than the perpendicular distance from the pivotal mounting of the higher order carry element to said line of action.

2,462,691
APPARATUS FOR TRANSFERRING MATERIAL
Ralph N. Thompson, Melvindale, Mich., assignor to National Steel Corporation, a corporation of Delaware
Application January 5, 1945, Serial No. 571,510
3 Claims. (Cl. 294—67)



3. Apparatus for transferring material, comprising a frame including a cross member, material engaging jaws supported by and movable along the cross member toward and away from each other, oppositely threaded screws extending oppositely along the cross member, and a nut threadedly engaging each screw and operatively connected to each jaw, each of said nuts being tiltable relative to the corresponding jaw.

2,462,692
TEARING AND DIVIDING EQUIPMENT
Herbert H. Vickers, Union, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application May 4, 1945, Serial No. 591,880
6 Claims. (Cl. 146—122)



1. A self-cleaning tearing and dividing machine for semi-adhesive plastic material which comprises a comb roll and a cutting roll, said rolls rotating toward each other at differential speeds, the slower moving comb roll carrying radially equi-spaced, substantially flat teeth, the faster moving cutting roll carrying radially equi-spaced claw-shaped teeth curved forwardly to expose a concave edge in the direction of rotation and thereby adapted to exert a gripping action against the material held by the trailing edge of said flat teeth, the said cutting roll also carrying in a position longitudinally intermediate to said claw-shaped teeth dividing discs of substantially the same maximum radius as the said claw-shaped teeth, the two rolls being so mounted that the said discs and teeth of the cutting roll are adapted to cut through the spaces between the teeth of the comb roll with slight clearances from each other and from the rolls, the speeds of rotation and the number of teeth on each roll being such that said comb roll presents a row of teeth in a given plane when claw points on said cutting roll

are in the same plane, the coaction of said two rolls being such that after one set of claw-shaped teeth has cut through the plastic by shearing said plastic against the opposing flat teeth, said flat teeth, during movement downward, are overtaken by the next following set of claw-shaped

providing a fuel supply chamber annularly of the body, a fuel port in the body communicating at its inlet end with the chamber and at its discharge end with the passageway, and a sleeve valve rotatably mounted on the body within the chamber

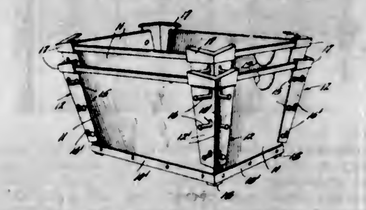
the inner end of the sleeve and rotatably bearing against said side wall in normal covering relationship to the main fuel feed port, said disc-like valve having an eccentric peripheral portion adapted upon rotation thereof to gradually open and close said main fuel feed port, means carried

device are adapted to move, two of said members being connected respectively with said parallel conductors and a third of said members being connected with said neutral point.

---

are in the same plane, the coaction of said two rolls being such that after one set of claw-shaped teeth has cut through the plastic by shearing said plastic against the opposing flat teeth, said flat teeth, during movement downward, are overtaken by the next following set of claw-shaped teeth of the faster moving roll which claw-shaped teeth pass sweepingly alongside the trailing edges of said flat teeth in a parting direction outwardly and downwardly from the center of the roll carrying the said flat teeth.

2,462,693
SHIPPING BOX
Benjamin A. Wabshaw, Des Moines, Iowa
Application September 19, 1947, Serial No. 775,020
7 Claims. (Cl. 220—97)



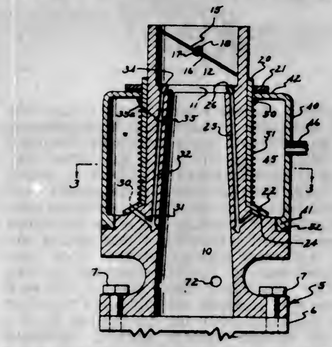
2. A shipping container comprising a rectangular bottom, four separate walls each connected at its lower edge to said bottom and swingable outwardly from the vertical about an axis substantially coincident with the connection between said wall and said bottom, and means connecting adjacent edges of said walls to form a box structure, said last means comprising four corner members each engaging two walls and adjustable relative thereto for selectively securing said walls in vertical or inclined position, each said corner member comprising two wings set at right angles and each provided with a plurality of generally horizontal slots, and said walls being provided with projections adjacent their edges for slidably engaging said slots.

2,462,694
NONFLAMMABLE HYDRAULIC FLUID
Kenneth E. Walker, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 9, 1946, Serial No. 702,083
13 Claims. (Cl. 252—75)

1. A hydraulic fluid consisting essentially of water, a polyhydric alcohol having from 2 to 5 carbon atoms per molecule, and, as a soluble thickener, from 0.2 to 30 grams of a polymerised alkylene ether having a molecular weight in excess of about 1000 and having recurring alkylene groups containing from 2 to 4 carbon atoms, per 100 c. c. of the said mixed water and polyhydric alcohol, the principal ingredient of the said fluid being the said polyhydric alcohol.

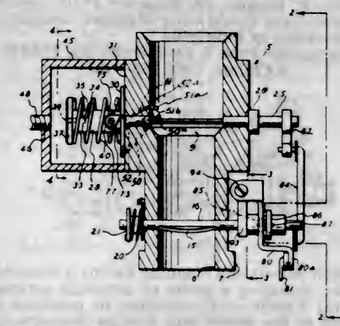
2,462,695
CARBURETOR
Frank D. Warburton, Southgate, Calif.
Application June 10, 1944, Serial No. 539,633
7 Claims. (Cl. 261—41)

1. A carburetor comprising a body presenting an air passageway therethrough, a control valve operably associated with the passageway, actuating means associated with the control valve, walls providing a fuel supply chamber annularly of the body, a fuel port in the body communicating at its inlet end with the chamber and at its discharge end with the passageway, and a sleeve valve rotatably mounted on the body within the chamber



for cooperation with the inlet end of the fuel port, said sleeve valve being operable in response to said actuating means to establish variable communication between the fuel supply chamber and said fuel port.

2,462,696
CARBURETOR
Frank D. Warburton, South Gate, Calif.
Application June 23, 1945, Serial No. 601,259
2 Claims. (Cl. 261—51)



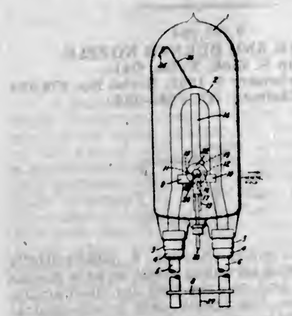
1. In a carburetor, the combination of a body having an air passage therethrough and a fuel supply chamber, a first shaft journaled in the body and disposed transversely of the air passage adjacent the outlet end thereof, a butterfly valve carried by the shaft to control the air passage, a second shaft journaled in the body and disposed tranversely of the air passage between the inlet end thereof and the first-mentioned shaft, one end of the second shaft projecting into the fuel supply chamber through a side wall thereof, a main fuel feed port and a booster fuel feed port in the body, each opening at one end into the fuel supply chamber through said side wall and communicating at its other end with the air passage, a sleeve axially slidably mounted on the second shaft within the fuel supply chamber, means preventing rotation of the sleeve relative to the second shaft, a disc-like valve fixed on

the inner end of the sleeve and rotatably bearing against said side wall in normal covering relationship to the main fuel feed port, said disc-like valve having an eccentric peripheral portion adapted upon rotation thereof to gradually open and close said main fuel feed port, means carried by the disc-like valve to control the booster fuel feed port, said means being operable in response to initial rotation of the disc-like valve in a direction which will open the main fuel feed port to momentarily open the booster fuel feed port, and means for rotating the shafts, said last-named means having a lost motion connection to the first shaft and a fixed connection to the second shaft whereby to cause limited initial rotation of the disc-like valve before actuating the butterfly valve.

2,462,697
THIOPHENE-2-CARBOXYLIC ACID
Viktor Weinmayr, Pitman, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 25, 1947, Serial No. 737,096
1 Claim. (Cl. 260—329)

In a process for preparing thiophene-2-carboxylic acid and thiophene-2-carboxylic acid chloride, the steps which comprise condensing thiophene with acetic anhydride in an organic solvent of the class consisting of nitrobenzene and chlorinated benzenes and in the presence of anhydrous aluminum chloride to form 2-aceto-thienone, separating the solvent solution of the crude aceto-thienone from the reaction mass and oxidizing the 2-aceto-thienone while dissolved in the organic solvent with an aqueous alkaline solution of sodium hypochlorite to the sodium salt of thiophene-2-carboxylic acid.

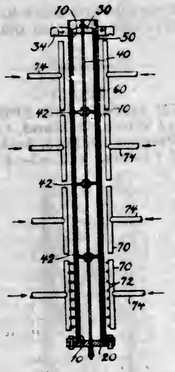
2,462,698
ELECTRICAL DISCHARGE DEVICE
Donald A. Wilbur, Troy, N. Y., assignor to General Electric Company, a corporation of New York
Application June 23, 1945, Serial No. 601,126
14 Claims. (Cl. 250—27.5)



1. A magnetron device comprising, an envelope, a transmission line including a pair of parallel conductors extending through a wall of said envelope, means electrically connecting said conductors within said envelope to provide an electrically neutral point, a plurality of anode members having portions cooperating to define a substantially cylindrical space within which the electrons constituting the space charge of the

---

2,462,699
FABRICATION OF CONDUITS FOR CORROSIVE FLUIDS
Leon J. Wilcox, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 29, 1944, Serial No. 570,453
1 Claim. (Cl. 22—202)



The method of fabricating conduits for corrosive fluids consisting of an outer pressure-resistant casing of steel, and a rigid inner liner of a corrosion-resistant, microporous carbon material separated from and bonded to said casing by a poured lead interliner, which comprises supporting the rigid liner concentrically of the casing, and in spaced relation thereto, by means of a mold element attached to the lower end of the casing in spaced relation thereto, said mould element and liner forming with the casing an annular chamber having an outwardly extended annularly flanged portion overlapping the lower end of the casing, pouring molten lead into said chamber from the upper end thereof to completely fill the chamber, cooling the molten lead under controlled conditions of solidification, adding molten lead to the chamber to supply any shrinkage deficiency, cropping the upper end of the conduit to remove dross in the interliner, and facing the upper end of the cropped casing with lead thermally united to the cropped end of the lead interliner.

2,462,700
UNIVERSAL JOINT
Sven Gustaf Winquist, Goteborg, Sweden
Application June 18, 1945, Serial No. 600,155
In Sweden July 4, 1944
8 Claims. (Cl. 64—21)

1. Universal joint having a single centre of deflection and comprising a driving joint member having at least two pairs of arms alternately on a larger and a smaller radius from the centre of deflection, a driven joint member having the same number of arms similarly arranged, the inner arms on one joint member being situated inside of the outer arms on the other joint member and vice versa, races on the arms on both sides thereof in a peripheral direction, rollers

interposed between the races for transmitting motion between the joint members, and a guide member disposed between the joint members,

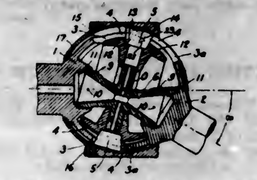
connecting said lengths of shafting, a motor on one of said bench frames, variable speed reduction gearing of large speed range on said motor-provided bench frame and connecting said motor to said length of shafting thereon, distant control

exterior of the nozzle being unobstructed between said means and the first and second ports to permit duel discharged from the ports to comingle directly with fuel discharged from said means, and means for supplying fuel to the nozzle.

height substantially equal to its maximum width, said top edge of the rear section being downwardly arched, and said top edge of the front section being substantially straight.

2,462,707

interposed between the races for transmitting motion between the joint members, and a guide member disposed between the joint members,



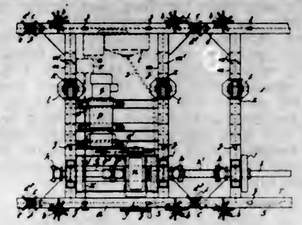
connected thereto and operative to guide the rollers substantially in the bisector plane of the joint members.

2,462,701
POWER SHEAR AND SPRAYER
Rand Wirth, Oakland, Calif.
Application October 10, 1945, Serial No. 621,459
9 Claims. (Cl. 47—1)

1. A shear comprising, a cylinder, two cylindrical shear members having each a shear recess formed in one side provided with cutting edges, and with the other side cut away to clear extensions of objects to be sheared, and with one shear member axially mounted on said cylinder and with the other shear member rotatable within and relative to the one member, and sector type chambers formed in said cylinder and a vane operating therein and operatively connected to said other of said shear members for relatively rotating said shear members in one direction for shearing and in the reverse direction for return of the blades to an initial position.

2,462,702
BENCH FRAMES FOR SUPPORTING AND ROTATING LONG CYLINDRICAL VESSELS DURING WELDING
Herbert Yates, Kingsbury, London, England
Application September 27, 1947, Serial No. 776,540
In Great Britain October 16, 1946
9 Claims. (Cl. 214—1)

1. A welding manipulator consisting of a plurality of bench frames, jacks on and supporting said bench frames, laterally separated interengaging coupling elements at both ends of said bench frames intersupportingly interconnecting said bench frames end to end, a length of shafting on each bench frame, work-supporting rollers on said bench frames rotatable by said shafting on each bench frame, shaft couplings interconnecting said lengths of shafting, a motor on one of said bench frames, variable speed reduction gearing of large speed range on said motor-provided bench frame and connecting said motor to said length of shafting thereon, distant control

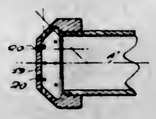


means of said motor and said gearing operable from any of said bench frames, and further work-supporting rollers on said bench frames transversely separated from said work-supporting rollers rotatable by said shafting.

2,462,703
COPOLYMERS OF MULTIOLEFINS WITH VINYL ETHERS AND METHOD OF MAKING SAME
David W. Young, Roselle, and William J. Sparks, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 29, 1945, Serial No. 638,516
10 Claims. (Cl. 260—86.5)

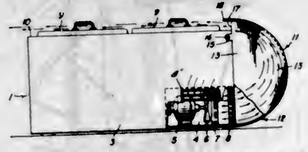
1. A copolymerization process comprising the steps in combination of mixing together one to sixty parts of a multiolefin having from 4 to 10 carbon atoms per molecule and 99 to 40 parts of a vinyl ether having from 3 to 8 carbon atoms per molecule, cooling the mixture to a temperature within the range between +10° C. and —164° C. and polymerizing the resulting mixture by the addition thereto of a Friedel-Crafts catalyst in solution in a solvent which is liquid at the reaction temperature and which does not form a complex with the catalyst.

2,462,704
BURNER AND BURNER NOZZLE
John S. Zink, Tulsa, Okla.
Application February 7, 1945, Serial No. 576,524
8 Claims. (Cl. 158—116)



1. A burner nozzle having a substantially frusto-conical wall arranged about an axis, means at the smaller end of said wall for discharging fuel axially from the nozzle, said frusto-conical wall being provided adjacent its smaller end with first ports arranged substantially at right angles to said axis and also provided with second ports arranged at obtuse angles to said axis, said second ports being arranged further away from the smaller end of the wall than the first ports and the first and second ports being so related that fluid discharged through them will impinge at points adjacent to the smaller end of the nozzle, and spaced from the outer surface of said wall, the exterior of the nozzle being unobstructed between said means and the first and second ports to permit duel discharged from the ports to comingle directly with fuel discharged from said means, and means for supplying fuel to the nozzle.

2,462,705
MOISTURE REMOVING DEVICE FOR DEEP FREEZERS
Raymond O. Abeling, Torrington, Conn., assignor of fifty per cent to John Hirchak, Torrington, Conn.
Application December 31, 1947, Serial No. 795,015
3 Claims. (Cl. 62—89)

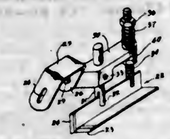


1. The combination with a deep freezer having a top lid, a condenser coil compartment with an outlet adjacent the bottom and in one vertical wall thereof, and means for discharging air under pressure out of said outlet, of means for deflecting such discharging air upwardly to the top of said freezer having a discharge opening extending across said top from one side of said freezer to an opposite side and in a plane perpendicular to said top, whereby such air is discharged along said top and lid to remove moisture from the same.

2,462,706
BLOUSE WITH VARIABLE NECKLINE EFFECT
Felicia Alberich, Sunnyside, N. Y.
Application January 23, 1948, Serial No. 3,913
5 Claims. (Cl. 2—106)

5. A pull-over garment incorporating a peripherally continuous neck opening including a rear portion for lying against the nape of the back of the wearer and a front portion which is of a length several times that of said rear portion, said garment including a front section substantially T-shaped in outline with the ends of the cross-bar of the T substantially triangular, said bar-ends having outwardly downwardly sloping upper edges and inwardly downwardly sloping bottom edges, and said front section having a substantially straight top edge joining said outwardly downwardly sloping edges, which top edge provides said longer portion of said neck opening, said garment also including a rear section which near its top has laterally extending projections having outwardly downwardly sloping top edges and inwardly downwardly sloping bottom edges, said rear section having a top edge joining its said outwardly downwardly sloping edges, which top edge provides said shorter portion of said neck opening, said front section having a maximum width greater than its maximum height, and said rear section having a maximum height substantially equal to its maximum width, said top edge of the rear section being downwardly arched, and said top edge of the front section being substantially straight.

2,462,707
SCRAP REMOVING DEVICE
Harold F. Allen, De Witt, N. Y., assignor to Allen Jigger Corporation, Syracuse, N. Y., a corporation of New York
Application October 17, 1947, Serial No. 780,400
5 Claims. (Cl. 25—24)



5. A scrapper for pottery jiggering machines comprising a bracket adjustably secured to the jiggering tool, a support adjustably secured to the bracket, a scrap removing blade pivotally mounted intermediate its ends to said bracket, said blade being formed with a horizontal edge at its forward end arranged to engage the top surface of a mould, and having a vertical edge portion arranged in trimming relation to the periphery of a piece of ware on the mould, said vertical edge extending forwardly of said horizontal edge, and means cooperable to yieldingly urge said horizontal edge against the surface of the mould.

2,462,708
CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, and Winthrop M. Leeds, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 19, 1945, Serial No. 573,522
11 Claims. (Cl. 200—150)

1. In a circuit interruptor, an arc-extinguishing unit, a substantially enclosed first chamber disposed adjacent one end of the unit, a piston chamber disposed intermediate the ends of the unit, an interrupting chamber disposed adjacent the other end of the unit, means comprising an intermediate contact for establishing a pressure-generating arc within the first chamber, means for establishing an interrupting arc within the interrupting chamber, and piston means associated with the intermediate contact and movable into the piston chamber during the opening operation of the interrupter, the piston means be-

ing charged by closing movement of the intermediate contact but independently movable therefrom during the opening operation of the interrupter.

abrasive wheel guard section, the apex of the contraction pointing in the direction of rotation of the abrasive wheel.

having lips formed along the longitudinal edges on one surface thereof, said retainer plate having a substantially closed cylindrical slot formed at its lower end, a hinge pin in said cylindrical slot

2,462,715
WARNING MAGNETIC UNIT
James C. Booth, Jackson Heights, N. Y.
Application September 16, 1944, Serial No. 554,385
1 Claim. (Cl. 177—311)

ing charged by closing movement of the intermediate contact but independently movable therefrom during the opening operation of the interrupter.

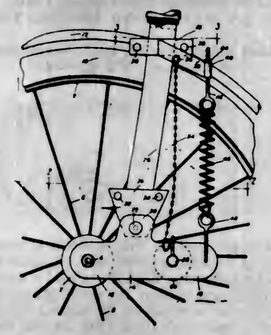
2,462,709
TOGGLE ACTUATED TOOL AND RELEASE THEREFOR
Edgar Dale Ball, Hersley Woodhouse, near Derby, England, assignor to Taylor-Ball Developments Limited, London, England
Application February 21, 1945, Serial No. 579,138
In Great Britain March 6, 1944
3 Claims. (Cl. 81—64)

1. A toggle actuated appliance comprising a pair of jaws, one of said jaws being L-shaped and having one of its limbs bifurcated, said bifurcated end straddling the other of said jaws, said other jaw having a slot therein, a hinge pin mounted in said slot, the ends of said bifurcated limb being secured to said hinge pin, an actuating member hingedly engaging at one end thereof the L-shaped jaw at the junction point of the two limbs of said L-shaped jaw, a link connected at its opposite ends to a point intermediate the ends of said actuating member and to the other said jaw, and an adjusting screw engaging with said other jaw and said hinge pin.

2,462,710
ABRASIVE WHEEL GUARD
Lewis John Howell Ballinger, Randwick, near Stroud, England
Application July 17, 1946, Serial No. 684,141
In Great Britain May 30, 1946
2 Claims. (Cl. 51—267)

1. A guard for a high speed abrasive wheel formed in complementary sections, one section being clamped to the housing of the wheel spindle, another and complementary section being detachably attached to the first mentioned section, each section being formed with fluid passages connecting a fluid inlet to portways formed on the inside guard faces against the side faces of the abrasive wheel and reasonably near the outside diameter of flanges on the abrasive wheel support, the portways connecting with radial passages wedge shaped in cross section and open to the wheel on the sides adjacent the wheel and which contract in the direction of rotation of the wheel also formed on the inner faces of the abrasive wheel guard section, the apex of the contraction pointing in the direction of rotation of the abrasive wheel.

2,462,711
FRONT WHEEL BICYCLE KNEE ACTION
Willard W. Barnett, Clovis, N. Mex.
Application August 2, 1946, Serial No. 687,354
1 Claim. (Cl. 280—277)



The combination with a bicycle fork for the front wheel, of a rocker, a plate journaling the rocker and detachably secured to the lower end of the fork, a wheel journaled on the forward portion of the rocker, a bracket detachably secured to the upper end of the fork, a coil spring interconnecting the rear portion of the rocker and the bracket, means for adjusting the tension of the spring, a chain for limiting the extended movement of the spring and a rubber cushion on the rear portion of the rocker positioned to abut the said plate and resiliently stop the upward movement of the rear portion of the rocker.

2,462,712
PREPARATION OF DL-MENTHONE
Arthur L. Barney, West Lafayette, Ind., assignor to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application August 18, 1942, Serial No. 455,279
2 Claims. (Cl. 260—587)

1. The method which includes: heating a material selected from the group consisting of menthols and menthones other than dl-menthone, at its boiling point under the pressure employed, with a catalyst selected from the group consisting of Raney nickel and copper chromite, and in the presence of an alkali metal base; and, condensing the dl-menthone vapors produced.

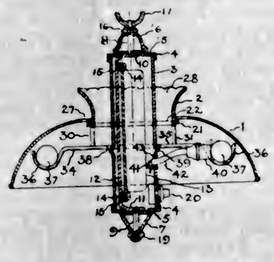
2,462,713
FILM HOLDER
Myers A. Bilofsky, Loch Arbour N. J.
Application June 7, 1947, Serial No. 753,323
1 Claim. (Cl. 95—66)

A film holder, comprising a pair of side members, a cross member inter-connecting said side members, a pair of cross panels, one on each side of said cross member and nesting with said side members, said cross member and said cross panels forming a pair of slots therebetween, an inner side member secured to the inner surface of each of said side members and in face-to-face relation one with the other, at least one retainer plate

having lips formed along the longitudinal edges on one surface thereof, said retainer plate having a substantially closed cylindrical slot formed at its lower end, a hinge pin in said cylindrical slot and having its ends protruding therefrom, said ends of said hinge pin being seated in said inner side members adjacent the lower ends thereof, said holder having at least one dark slide adapted

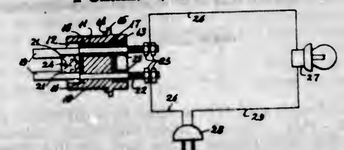
to be withdrawn from an end of the holder, said inner side members having grooves formed therein for receiving said slide, and light valve means mounted in the underside of said cross member, said retainer plate having a groove formed therein adjacent the lower edge thereof, the wall of said groove flaring outwardly to receive the bottom edge of a film and said slide within said groove.

2,462,714
CIRCULAR-LINE FLUORESCENT LIGHTING FIXTURE
Hugo E. Bohl, Westfield, N. J.
Application December 6, 1945, Serial No. 633,125
5 Claims. (Cl. 240—51.12)



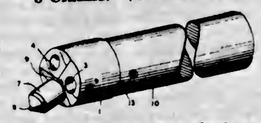
4. In a fluorescent lighting fixture, the combination of a central member adapted to receive a fluorescent lamp transformer, heat releasing slots in said member, a starting switch in said member, a circular fluorescent lamp connected with said transformer and said starting switch to form a complete electrical circuit, and a reflector assembly comprising a downwardly reflecting canopy having arcuate apertures surrounding an upwardly extending crown adapted to reflect light from said apertures in a generally horizontal direction, and means embracing said central member which supports said lamps and said reflector assembly above said lamp.

2,462,715
WARNING MAGNETIC UNIT
James C. Booth, Jackson Heights, N. Y.
Application September 16, 1944, Serial No. 554,385
1 Claim. (Cl. 177—311)



A magnetic metal detecting plug, comprising an externally threaded plug body for mounting in a threaded opening formed in a motor casing, said plug body having its ends formed with recesses and spaced orifices extended therethrough between the base walls of said recesses, washers of insulation material disposed in said recesses and formed with orifices in alignment with said orifices of said plug body, bar magnets within the recess of said plug body on the inside of the motor casing and arranged in axial alignment with said aligned orifices and of a cross-sectional size slightly greater than the diameter of said aligned orifices to abut the outer face of the adjacent washer about its orifices, said bar magnets having unlike poles extended away from said plug body, threaded stems continuing from said bar magnets in axial alignment therewith and extended through said aligned orifices and projected beyond the other end of said tubular body, a tubular insulator in one of said orifices of said tubular body between the adjacent faces of said washers and through which the respective threaded stem extends, nuts threaded on the extended ends of said threaded stems and abutting the adjacent face of the adjacent washer securing said threaded stems in position in said aligned orifices, and a pair of clamp nuts on the extended end of each of said threaded stems outwards of said first-mentioned nuts.

2,462,716
TOOLHOLDER
Sheldon M. Booth, Chicago, Ill.
Application April 29, 1946, Serial No. 665,809
8 Claims. (Cl. 125—39)



1. A device of the class described comprising a head having a plurality of angularly spaced sockets in one end, said sockets each being adapted to receive a cutting tool and each socket axis being at a different predetermined angle relative to the axis of said head, and an eccentrically located shank extending axially from the other end of said head, said shank having its axis radially equidistant from the positions of the tip of a cutting tool seated in said sockets selectively.

2,462,717
BUTTON FASTENER
Milton Frank Brown, Jr., Thomson, Ga.
Application November 13, 1945, Serial No. 628,263
1 Claim. (Cl. 24—103)

A button fastening comprising a button having button holes therein, a staple including a flat base portion having prongs thereon positioned at right

angles to said base portion, said flat base portion being juxtaposed with respect to one side of said button, an attaching strip of textile fabric under-

tion normally extending from the bar when the device is in position thereon and arranged at an oblique angle to the bar, a hook formed on

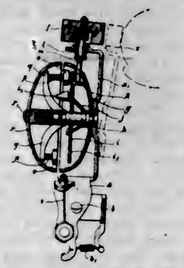
segmental clamping members constructed to jointly embrace the adjacent ends of two of said sections when the latter are arranged in longi-

an elastic band which is engaged in a stretched condition over said barrel, a sliding plate positioned between said first named plates, a lug integrally formed with said sliding plate and extend-

angles to said base portion, said flat base portion being juxtaposed with respect to one side of said button, an attaching strip of textile fabric underlying said flat base portion and on the opposite side thereof from said button, said prongs extend-

ing through said fabric strip in a direction away from said button, and stitching extending through said button holes and passing through said fabric and on each side of said flat base portion, thereby securing all the parts together.

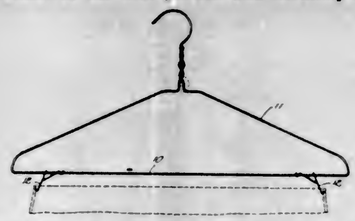
2,462,718
CYCLE BELL
Marcel Brun, Saint-Etienne, France
Application August 4, 1947, Serial No. 765,957
In France December 1, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires December 1, 1965
2 Claims. (Cl. 116—61)



1. A cycle bell comprising a support; a gudgeon fixed on said support; a first sounding dome fixed to said support coaxially to said gudgeon, said dome opening opposite to said support; a member rotatably mounted on said gudgeon within said dome; means to rotate said member, said means embodying a frictional roller rotatably carried by said support and adapted to bear on a cycle tyre; a second sounding dome carried by said gudgeon coaxially to said first dome, in opposed relation thereto; strikers in close but non-contacting relation with each of said domes; means embodying springs to support said strikers, said last-named means being attached to said gudgeon; means on said rotatable member adapted to pass between said domes and said strikers to move the latter inwardly in succession and to release the same; said member being the form of a perforated plate and said first means comprising a pinion in engagement with said plate, and a shaft passed through a hole in said first sounding dome at about right angles to said gudgeon, said shaft being rotatably carried by said support and carrying said pinion within said first dome and said frictional roller externally of said dome.

2,462,719
SUSPENDING DEVICE
Noel M. Byrd, Charleston, Ill.
Application September 22, 1945, Serial No. 618,013
3 Claims. (Cl. 223—88)

1. A self-locking suspending device adapted for use on a bar support consisting of a normally slidable continuous unit comprising a first portion normally extending from the bar when the device is in position thereon and arranged at an oblique angle to the bar, a hook formed on the free end of the first portion, a loop on the bar end of the first portion extending around the top of the bar, a second portion extending from the other side of the loop in substantially the same direction as the first portion and normally sub-

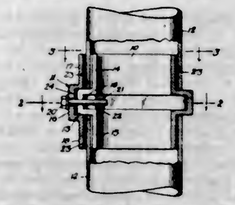


stantially parallel thereto, a third portion at the end of the second portion extending at an acute angle up to a level above the center of the bar, and a U-shaped portion on the bar end of the third portion with the concave part of the U pressing against the bottom of the bar, whereby an inward and downward force exerted on said first portion urges said U-shaped portion into frictional locking engagement with said bar.

2,462,720
GAS PRODUCER
Marc F. Charrier, Monticello, N. Y.
Application February 6, 1948, Serial No. 6,679
2 Claims. (Cl. 48—89)

1. In a gas producer, a fire box, a retort above said fire box, said retort being divided into two gas generating chambers, with separate means of access to each chamber, a plurality of combustion flues, said flues forming the division between the generating chambers, and aranged to function as a grate for the upper chamber.

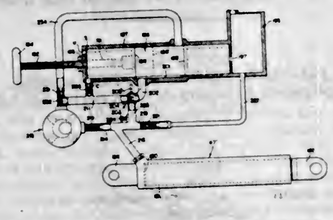
2,462,721
CLAMP
Harold Cohen, Elizabeth, N. J.
Application March 22, 1947, Serial No. 736,468
5 Claims. (Cl. 285—197)



1. A clamp for tubular sections of a mast or analogous structure comprising two cooperative

segmental clamping members constructed to jointly embrace the adjacent ends of two of said sections when the latter are arranged in longitudinal alinement, said members overlapping each other and having opposed flanges contacting the inner and outer surfaces of the sections, and securing means engaging said members causing them to clamp the sections in their longitudinal alinement.

2,462,722
CONTROLLABLE HYDRAULIC POWER LIFT
Frank T. Court, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application February 19, 1942, Serial No. 431,524
19 Claims. (Cl. 60—52)



1. Hydraulic control mechanism for agricultural machines and the like, comprising a cam-type suction controlled fluid pump having spring loaded intake valves, a working cylinder and piston unit having a working chamber with a given volumetric capacity and adapted to receive fluid under pressure from said pump, means providing a measuring chamber having substantially the same volumetric capacity as said cylinder and piston unit, means for delivering a measured quantity of fluid from said measuring chamber to said pump, said fluid delivering means including means for applying pressure against the fluid in said measuring chamber, the loaded valves of said pump being loaded to a degree that prevents the pump intake valves from opening except when positive pressure is applied to the fluid in said measuring chamber, and means for varying the volumetric capacity of said measuring chamber so as to control the amount of fluid delivered by said pump to said cylinder and piston unit.

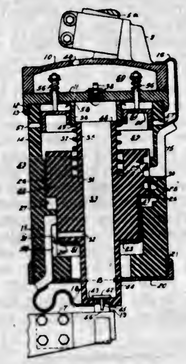
13. A hydraulic system comprising a ram, a pump, a measuring chamber, biased valve means disposed between said pump and measuring chamber for controlling the flow of fluid to said ram and to prevent any flow of fluid to said pump from said chamber unless positive pressure is applied to the fluid in said chamber sufficient to overcome said biased valve means, valve controlled means establishing a by-pass between said ram and chamber, and combined means for controlling said valve controlled by-pass means and applying positive pressure to the fluid in said chamber for thereby causing fluid to flow from said pump and thence to said ram unit.

2,462,723
TOY REPEATING RUBBER BAND GUN
John R. Crnich, Chicago, Ill.
Application June 30, 1945, Serial No. 602,534
3 Claims. (Cl. 124—19)

1. A toy gun for shooting elastic bands comprising a pair of spaced plates, said plates defining a stock of the gun, a barrel connected to said plates, a plurality of alined teeth upon said plates, each pair of aligned teeth being shaped to hold an elastic band which is engaged in a stretched condition over said barrel, a sliding plate positioned between said first named plates, a lug integrally formed with said sliding plate and extending beyond said teeth, said lug being provided with an inclined face for the purpose of disengaging said elastic bands from said teeth in succession for propelling the same when said sliding plate is shifted within said stock, said plates of said stock being provided with alined recesses,

said sliding plate being provided with a plurality of finger openings arranged in a row and in the path of said recesses, said finger openings constituting means whereby said sliding plate may be engaged for shifting the same, and means cooperating with said plates and said sliding plate whereby the shifting of the latter plate may be periodically limited to the extent required for said lug to dislodge a single elastic band from the pair of said teeth with which the same is in engagement.

2,462,724
CIRCUIT INTERRUPTER
James M. Cumming, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 1, 1945, Serial No. 575,589
4 Claims. (Cl. 200—150)



1. In a circuit interrupter, an arc extinguishing unit, a relatively stationary contact, a piston member carrying a movable contact, opening motion of the piston member causing a separation of the movable contact from the stationary contact to establish an interrupting arc and a forcing of fluid against the same, the piston member having a surface which is drawn adjacent the arc during the opening operation, means for establishing a serially related pressure-generating arc, the pressure-generating arc facilitating the opening motion of the piston member, and second piston means operated by the pressure created at the pressure-generating arc to increase the pressure maintained at the interrupting arc.

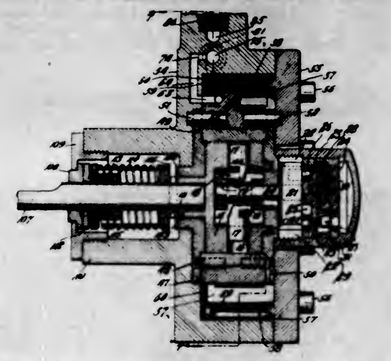
2,462,725
PUMP
Ernest A. Cuny, New York, N. Y., assignor to Cuny Engineering Inc., a corporation of New Hamp-

members, a transverse member having its ends receivable in supported positions within said socket portions, and against longitudinal movement relative to said frame members, a hitch

acter under the conditions of heat and wear in the use of the pan in a baking oven and serving to gradually expose the tinned surface for burning out of said surface.

with light of 3000 to 6000 Angstrom units as it moves along said reaction zone; and simultaneously admitting into the reaction zone said gaseous mixture of sulfur dioxide and chlorine in

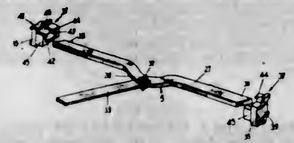
2,462,725
PUMP
Ernest A. Cuny, New York, N. Y., assignor to Cuny Engineering Inc., a corporation of New Hampshire
Application December 18, 1945, Serial No. 635,645
12 Claims. (Cl. 103—161)



1. A pump comprising a pump cylinder, a rotor having a close running fit in said cylinder and external means for effecting rotation of the same, said rotor having a radial piston cylinder open at the outer end to said pump cylinder, a piston operable in said piston cylinder, a crank pin eccentrically related to said rotor and connected with said piston for effecting reciprocation of said piston in the rotation of said rotor, said pump cylinder having low and high pressure grooves extending arcuately around opposite sides of the same between the points of maximum and minimum displacement positions of the piston and said pump cylinder having an inlet passage opening into the low pressure groove and a discharge passage extending from the high pressure groove, and balancing grooves at the sides of and of substantially the same longitudinal extent as the pressure grooves, said balancing grooves being connected one at the low pressure side across to the high pressure groove and one at the high pressure side across to the low pressure groove, said balancing grooves being connected and arranged in pairs disposed with the grooves of each pair along opposite sides of said pressure grooves, the wall of said pump cylinder being provided by a liner, said balancing grooves being formed in the inner face of said liner and said cross connections being provided by holes through and grooves in the outer face of said liner.

2,462,726
TRACTOR HITCH BRACKET
Dugald Currie, Des Moines, Iowa, assignor to Donald Currie, Odebolt, Iowa
Application July 3, 1946, Serial No. 681,319
4 Claims. (Cl. 280—33.44)

1. A hitch attachment for a tractor having an axle housing, a frame structure supported on the tractor including a pair of transversely spaced rearwardly extended frame members connected at their forward ends with said axle housing, and a drawbar connected between the rear ends of said frame members, said attachment comprising a pair of oppositely arranged brackets mounted on said frame members, socket portions on said brackets located inwardly of said frame members, a transverse member having its ends receivable in supported positions within said socket portions, and against longitudinal movement relative to said frame members, a hitch

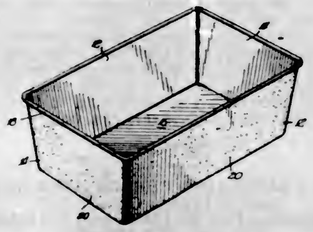


bar pivoted at its forward end on said transverse member for pivotal movement between said frame members, and means movably supporting said hitch bar adjacent its rear end on said drawbar.

2,462,727
NECK SCARF
Patricia G. Danek, Minneapolis, Minn.
Application February 9, 1948, Serial No. 7,187
5 Claims. (Cl. 2—91)

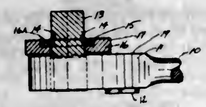
5. In a neck scarf, a body member, terminal tabs, ribbing on each side of the scarf connecting each tab to the body member, said ribbing being materially narrower than the body member and the tabs and holding the connected portions thereof contracted, forming between each end portion of the body member and the respective tab a pair of deep opposing scallops, and a passageway between the ribbings on the sides of the scarf at each tab through which the tab at the other end of the scarf may be tucked.

2,462,728
TIN COATED BAKING PAN WITH PAINTED EXTERIOR SURFACES
Jerome H. Debs, Chicago, Ill., assignor to Chicago Metallic Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application June 20, 1947, Serial No. 756,016
2 Claims. (Cl. 126—390)



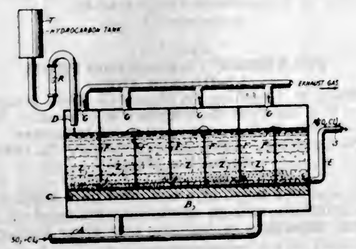
1. In combination with a sheet metal, tin coated baking pan having side walls and a bottom portion, a coating of heat absorbing paint on the exterior surfaces of said walls and bottom portion, said paint being non-permanent in character under the conditions of heat and wear in the use of the pan in a baking oven and serving to gradually expose the tinned surface for burning out of said surface.

2,462,729
MANIPULATING MEMBER FOR SOCKET WRENCH
Earl L. Deck, Youngstown, Ohio
Application January 11, 1946, Serial No. 640,500
1 Claim. (Cl. 81—60)



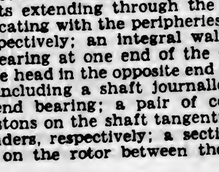
An attachment for a socket wrench having a head and a non-circular socket engaging member rotatable therein and comprising a manipulating disc having a recess formed in one face of said disc and a through opening in said disc communicating with said recess, said opening being of a non-circular shape for registry with said socket engaging member so as to provide a driving connection between said disc and said member, means for holding the said manipulating disc in position on the said socket engaging member and in the said recess, said means comprising a split clamp ring positioned to engage the face of the disc opposite to the face thereof which is adjacent the head of the wrench and to frictionally engage the said socket engaging member, the said manipulating disc being of a diameter larger than the greatest width of the wrench to which it is applied.

2,462,730
PREPARATION OF POLYSULFONYL CHLORIDES
Stanley Rawlings Detrick, New Castle County, William Howard Lockwood, Wilmington, and Nelson Whitman, New Castle County, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application August 23, 1944, Serial No. 550,832
1 Claim. (Cl. 204—163)



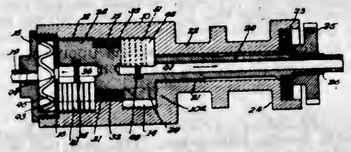
A continuous process for treating a saturated aliphatic hydrocarbon in liquid state with a gaseous mixture of sulfur dioxide and chlorine to produce a product having at least two sulfonyl groups per molecule, which comprises feeding said liquid hydrocarbon continuously into an elongated reaction zone which is subdivided into a series of communicating subzones following each other in an essentially horizontal line, whereby the liquid reaction mass is caused to move progressively from one subzone to the next until it traverses the entire reaction zone; irradiating said reaction mass with light of 3000 to 6000 Angstrom units as it moves along said reaction zone; and simultaneously admitting into the reaction zone said gaseous mixture of sulfur dioxide and chlorine in the form of a plurality of diffused streams moving in an essentially vertical direction, whereby each subzone is supplied directly with a portion of said gaseous streams, and whereby any turbulence caused by the motion of said gaseous stream through said liquid stream in any particular subzone will be confined to said subzone, so as to avoid intermingling between the incoming fresh hydrocarbon and outgoing polysulfonylated compound.

2,462,731
DIVERSION BLIND FITTING
George A. Duggan, Long Beach, Calif.
Application October 24, 1946, Serial No. 705,341
1 Claim. (Cl. 285—205)



A diversion blind fitting for a pipe line, having flanged joints, said fitting comprising a body, said body having bolt holes extending laterally therethrough, said bolt holes matching holes in the flanged joints of the pipe line, whereby the body is mounted in the pipe line, a pipe extension extending from the body, and integrally formed therewith, means on the pipe extension to which a pipe is attached, said pipe extension and body having a duct extending therethrough, said duct extending through one side of the body only, and a solid wall on the other side of the body whereby the entire flow through the pipe line is directed through said duct.

2,462,732
SLIDABLE VANE PUMP
Julius Dusevoir, Dearborn, Mich., assignor to Consolidated Vultee Aircraft Corp., San Diego, Calif.
Application October 12, 1945, Serial No. 621,869
8 Claims. (Cl. 103—136)



1. A rotary pump comprising: a casing provided with a pair of co-axial cylinders, an integral eccentric bearing between the cylinders, inlet ducts extending through the walls of and communicating with the peripheries of the cylinders, respectively; an integral wall and an eccentric bearing at one end of the casing, and a removable head in the opposite end of the casing; a rotor including a shaft journalled in the eccentric end bearing; a pair of co-axial cylindrical pistons on the shaft tangentially engaging the cylinders, respectively; a sectional bearing-member on the rotor between the pistons and

fitting in the eccentric bearing between the cylinders; said pistons, bearing-member and the shaft being insertable through the end of the cylinder

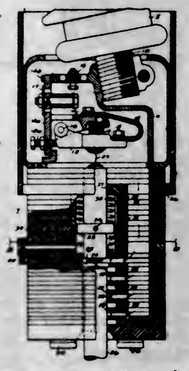
of concentric passages, a plurality of concentric conduits arranged between said end sections with each conduit in communication with a passage in

introducing into a pressure-resistant vessel a reaction mixture comprising a saturated aliphatic monohydric alcohol containing not more than three carbon atoms per molecule, carbon monox-

with said inlet nipple, a petcock on the bottom nipple, and a fluid outlet nipple extending through the lower side wall of said outer container.

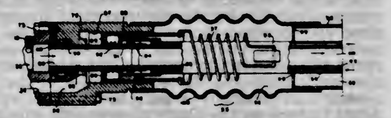
fitting in the eccentric bearing between the cylinders; said pistons, bearing-member and the shaft being insertable through the end of the cylinder provided with the removable head; the pistons being provided with separate central longitudinal discharge ducts therein extending to the opposite ends of the rotor, respectively, and radial channels communicating with the central ducts, respectively; and vanes slidably mounted in the channels, engaging the cylinders and provided with ducts therein for discharging fluid under pressure from the cylinders to said central ducts, respectively, the head being provided with an outlet for the discharge of fluid from the central duct in the adjacent piston.

2,462,733
CIRCUIT INTERRUPTER
Gilbert J. Easley, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 30, 1946, Serial No. 706,733
10 Claims. (Cl. 200—150)



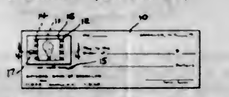
1. In a circuit interrupter, a relatively stationary contact, an intermediate contact cooperable with the relatively stationary contact to establish an arc, a movable contact separable from the intermediate contact to establish a second serially related arc, a piston secured to and movable with the intermediate contact, an operating cylinder within which the piston moves, by-passing means associated with the operating cylinder to equalize the pressure on both sides of the piston only during the initial portion of the opening travel of the piston, and means preventing the arcing pressure from acting upon the piston to accelerate its opening movement.

2,462,734
FLUID TRANSMITTING DEVICE
Walter Ferris, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 26, 1945, Serial No. 579,878
19 Claims. (Cl. 285—22)



1. A fluid transmission device comprising two end sections each of which contains a plurality of concentric passages, a plurality of concentric conduits arranged between said end sections with each conduit in communication with a passage in each end section, and a plurality of means for providing substantially fluid tight joints between each of said end sections and the adjacent ends of said conduits, each of said means including a hollow ball and socket joint, to provide a seal between an end of a conduit and the passage with which that conduit communicates.

2,462,735
PHOTO IDENTIFICATION FOR CHECKS
Bernard L. Goldwater, Brooklyn, N. Y.
Application January 15, 1945, Serial No. 572,879
1 Claim. (Cl. 283—7)



A check having an identification photograph printed thereon, and a maximum amount indicator arranged around said photograph, and comprising a plurality of numbers which are bounded by a perforated area making it easy for one of the numbers to be partially or completely removed, and a transparent sticker secured over said photograph and over said maximum amount indicator.

2,462,736
PREPARATION OF N,N' DIMETHYL-ETHANOLAMINE
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 9, 1944, Serial No. 548,803
3 Claims. (Cl. 260—584)

1. A process for the preparation of an N-N'dimethylethanolamine which comprises subjecting formaldehyde cyanhydrin to hydrogenation in the presence of formaldehyde and 4 to 20 parts by weight of methanol per part of formaldehyde cyanhydrin at a temperature between 15° and 150° C., a pressure between 200 and 700 atmospheres and in the presence of at least 25% by weight of a hydrogenation catalyst.

2,462,737
POLYMERIC COMPOUNDS FROM 1,3-DIOXOLANE
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 21, 1945, Serial No. 579,146
10 Claims. (Cl. 260—338)

8. A liquid polymeric condensation product of 1,3-dioxolane and an aromatic compound of the group consisting of benzene and alkyl benzenes.

2,462,738
SYNTHESIS OF ORGANIC OXYGEN-CONTAINING COMPOUNDS
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 17, 1946, Serial No. 670,524
6 Claims. (Cl. 260—488)

1. A process for the synthesis of organic oxygen-containing compounds which comprises

introducing into a pressure-resistant vessel a reaction mixture comprising a saturated aliphatic monohydric alcohol containing not more than three carbon atoms per molecule, carbon monoxide and a diffused cobalt acetate catalyst, heating the said reaction mixture at a temperature of 100° to 325° C. under superatmospheric pressure, and thereafter separating from the resulting reaction product the organic oxygen-containing compounds produced by the said reaction.

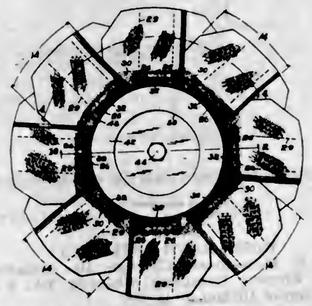
2,462,739
RECOVERY OF HYDROGEN FLUORIDE-BORON TRIFLUORIDE CATALYSTS
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 13, 1946, Serial No. 709,423
15 Claims. (Cl. 252—411)

1. A process for removing hydrogen fluoride-boron trifluoride catalysts from combinations thereof with aromatic aldehydes which comprises admixing a metal fluoride of the class consisting of alkali metal and alkaline earth metal fluorides with a composition comprising an aromatic aldehyde and a hydrogen fluoride-boron trifluoride catalyst combined therewith whereby both the hydrogen fluoride and the boron trifluoride become combined with the said metal fluoride and a precipitate containing combined hydrogen fluoride and boron trifluoride and metal fluoride is obtained and thereafter separating the said aromatic aldehyde from the resulting combination of hydrogen fluoride, boron trifluoride and metal fluoride and recovering hydrogen fluoride and boron trifluoride therefrom by pyrolysis at a temperature in the range of 200° to 800° C.

2,462,740
GASOLINE FILTER
Asbjorn Hagen, Kississing, Manitoba, Canada
Application December 12, 1945, Serial No. 634,471
2 Claims. (Cl. 210—187)

1. A filter comprising similarly shaped outer and inner containers having substantially parallel walls and formed with separate vertically spaced removable centrally apertured covers, said inner container having spaced circumferentially disposed side openings through its side wall, fine mesh wire screen supported interiorly of said inner container overlying said side openings, an inverted cone-shaped perforated filter in said inner container supported by a tube extending through both of said covers, a filter mass in said inner container disposed above said inverted cone-shaped perforated filter between the same and said fine mesh wire screen, a fluid inlet nipple connection supported centrally of said outer cover in axial alignment with said tube, a bottom nipple extending between and through the bottom portions of said containers in axial alignment with said inlet nipple, a petcock on the bottom nipple, and a fluid outlet nipple extending through the lower side wall of said outer container.

2,462,741
ROTARY ABRADING TOOL
Elisha W. Hall, Scituate, Mass.
Application March 6, 1946, Serial No. 652,263
7 Claims. (Cl. 51—193)



1. In a rotary abrading tool, the combination of a hub having two sets of lugs, the lugs of one set alternating with the lugs of the other set, and the lugs of one set having free ends extending in a direction opposite to those of the other set, and a circumferential mass of abrading material having alternate openings receiving alternate lugs.

2,462,742
ARYL TRICHLOROTHIO ACETATES IN ELASTOMER TREATMENT
Alban Thomas Hallowell, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 13, 1947, Serial No. 734,549
6 Claims. (Cl. 260—86.5)

6. In the preparation of elastomers, the improvement wherein a monomer composition predominating in a conjugated diene of the class consisting of butadiene, isoprene, 2-chlorobutadiene-1,3, and 2-fluorobutadiene-1,3 is emulsion polymerized in the presence of from 0.1 to 3% based on the weight of the polymerizable monomers, of an aryl trichlorothiolacetate.

2,462,743
DOOR-CUPBOARD AND TRAY
Oscar C. Handel, Kansas City, Kans.
Application June 12, 1946, Serial No. 676,211
3 Claims. (Cl. 312—186)

1. A refrigerator door having a built-in cupboard and an opening in the exterior face of the vertical front wall of the door to gain access to said cupboard, a panel shaped closure for the opening hinged along an edge of the opening, a recess on the inner surface of the front wall of the door below said opening, a rearwardly extending tongue on said closure adapted to fit into said recess when the closure is in closed position, detachable means for fastening the closure in closed position and a dispensing tray rotatably mounted on the closure, and detachable retaining means mounted for coaction on

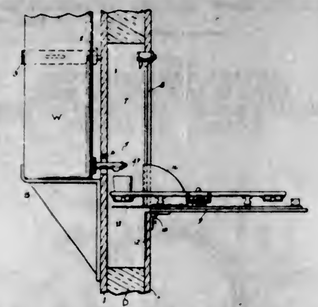
the tray and closure, and a pair of stop brackets mounted on the closure for coaction with the

piston, means located within said machine for permanently connecting together said starting

a load handling instrumentality suspended to be responsive to gravity and secured to said winding drum to be wound thereon, a driving member of an eddy current clutch mounted for rotation and connected to the output shaft of said prime

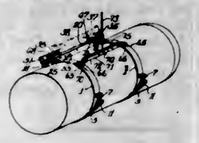
juxtaposition to the picture on the side of the picture toward the light, the convexity of the condenser lens means being such that it directs the light in a converging path from the entire area of the picture to an apex substantially at

the tray and closure, and a pair of stop brackets mounted on the closure for coaction with the



front wall of the door when the closure is in open position.

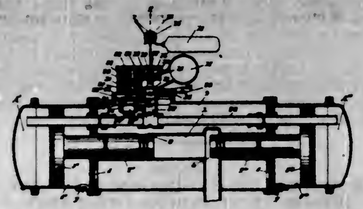
2,462,744
BOMB BAND ASSEMBLY
Walter C. Hasselhorn, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a corporation of Illinois
Application August 5, 1943, Serial No. 497,427
25 Claims. (Cl. 89—1.5)



2. Mounting apparatus for suspending an aerial missile or the like in a position for automatic release upon a target without any of the parts effecting its suspension remaining on or about its periphery while descending upon the target comprising embracing means adapted to extend circumferentially about the missile, a substantially rigid structural element to which said embracing means is releasably connected, and trigger mechanism for holding said embracing means connected to said structural element, said trigger mechanism including a member responsive to the weight of the missile to prevent release of said parts from each other while mounted in suspended relation but which will release the same when relieved of said weight.

2,462,745
FREE PISTON MACHINE PROVIDED WITH PNEUMATIC STARTING MEANS
Helge Bodvar Horgen, Lyon, France, assignor, by direct and mesne assignments, of nine-tenths to Raul Pateras Pescara, Lisbon, Portugal, and one-tenth to Societe d'Etudes et de Participations, Eau, Gaz, Electricite, Energie S. A., Geneva, Switzerland, a society of Switzerland
Application April 11, 1945, Serial No. 587,697
In France May 30, 1944
12 Claims. (Cl. 60—14)

10. A machine which comprises, in combination, a motor cylinder, two motor pistons freely movable in said cylinder in synchronism with each other, means associated with each of said pistons for the pneumatic starting of said machine, each of said means forming a starting space adapted to coact with the corresponding piston, means located within said machine for permanently connecting together said starting



spaces, and a single starting device for feeding gas under pressure to said last mentioned means.

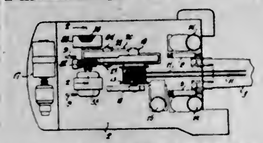
2,462,746
ELECTRIC FLUID HEATER
Hollis Chubbuck Inman, Miami, Fla.
Application May 12, 1947, Serial No. 747,431
5 Claims. (Cl. 219—39)

1. A fluid heater, comprising: a tubular duct providing a passage for a central fluid stream; a casing providing an elongated closed chamber surrounding said tubular duct; electrical heating means in said chamber; and a jacket surrounding said tubular duct and enclosing said casing, said jacket being of greater length and greater transverse dimension than said casing and providing an annular fluid space about the periphery and ends of said casing for an annular fluid stream, said tubular duct having identical openings establishing communication between the interior thereof and the spaces in said fluid jacket at the respective ends of said casing, whereby the divergence of fluid from the central fluid stream into the annular fluid stream and the convergence of fluid from the annular fluid stream into the central fluid stream are the same at both ends of the heater.

2,462,747
WINCH CONTROL
Henry S. Jacobs, Milwaukee, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application March 28, 1945, Serial No. 585,253
9 Claims. (Cl. 254—187)

6. In a winch the combination comprising a prime mover adapted for continuous running and having a rotatable power output shaft, a winding drum mounted for winding and unwinding movement, a hoisting line controllably connected with

a load handling instrumentality suspended to be responsive to gravity and secured to said winding drum to be wound thereon, a driving member of an eddy current clutch mounted for rotation and connected to the output shaft of said prime mover to be driven thereby, a driven member for said eddy current clutch mounted for rotation in torque receiving relationship to said driving member, an eddy current clutch exciting winding asociated with said driving and driven members, said driving and driven members and said exciting winding being adapted to cooperate to transmit a maximum predetermined torque when



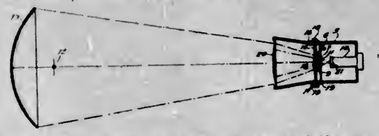
the slip between said driving and driven members is approximately equal to the running speed of said driving member, a take-off pinion and shaft therefor secured to said eddy current clutch driven member to rotate therewith, and loading means for said take-off pinion shaft and eddy current clutch driven member adapted to render the combined moment of inertia thereof in pounds feet squared numerically equal to from $1/8$ to $1/14$ said maximum predetermined torque of said eddy current clutch in pounds feet, and a power transmission having a substantial driving ratio of reduction forming a gearing connection between said pinion and said winding drum.

2,462,748
PIPE PLUG
John Johnson, Grand Forks, N. Dak.
Application April 25, 1945, Serial No. 590,149
1 Claim. (Cl. 138—89)

A pipe plug comprising a rigid sleeve adapted for insertion in one end of a pipe, a packing member on the pipe receiving the sleeve, an expansible rubber sleeve secured at one end to the inner end of the rigid sleeve, a plug secured in the other end of the expansible sleeve, said plug having a threaded bore, a rod slidably inserted in the rigid sleeve and having threaded ends, one end of the rod being threaded in the plug, and means attached to the other end of the rod and adapted to manipulate the same for expanding said rubber sleeve, said sleeve being hollow and spaced by said plug and the inner end of said rigid sleeve from said rod so that said sleeve is easily deformable under compression to expand the same.

2,462,749
LIGHT CONDENSER FOR PICTURE PROJECTION UNITS
George Theodore Johnson, Chicago, Ill.
Application June 27, 1945, Serial No. 601,811
4 Claims. (Cl. 88—24)

1. A projector comprising in combination, a picture support, a projection lens spaced therefrom, a light source, and means for directing the light from said source through the picture to the posterior element of the projection lens, said means comprising condenser lens means in close juxtaposition to the picture on the side of the picture toward the light, the convexity of the condenser lens means being such that it directs the light in a converging path from the entire area of the picture to an apex substantially at



the surface of the posterior element of the projection lens, and a mask restricting the exposed portion of the posterior end of the projection lens to dimensions less than three fourths the dimensions of the picture.

2,462,750
ORNAMENTAL LAMPSTAND WITH BELL
Irving Klein, New York, N. Y.
Application May 23, 1947, Serial No. 749,975
8 Claims. (Cl. 177—7)

1. In a lamp having a base, a lamp shade mounted on said base, a lamp mounted on said base within said shade for illuminating the shade, a bell crank pivotally supported within said shade, a bell fixed to said crank to ring when the bell crank is turned, a rotative lever arm having its free end traversing the pivotal path of said bell crank to pivot the bell crank and ring said bell once for each revolution of said lever arm, and means for rotating said lever arm.

2,462,751
SPEED CONTROL FOR INDUCTION MOTORS
Glenn Koehler, Madison, Wis.
Application January 18, 1946, Serial No. 642,078
7 Claims. (Cl. 318—229)

1. In an apparatus adapted for association with an alternating current motor to control the speed thereof the combination comprising a direct current pilot generator adapted to be connected to the shaft of an alternating current motor to be mechanically driven thereby and having an output which increases as a function of its speed of rotation with a polarity determined by the direction of said rotation, amplifying circuit means connected to the output of said pilot generator and controlled thereby and adapted to supply current in substantial amount in inverse proportion to said pilot generator output when said motor and generator are running in forward direction and in direct proportion to said pilot generator output when running in reverse direc-

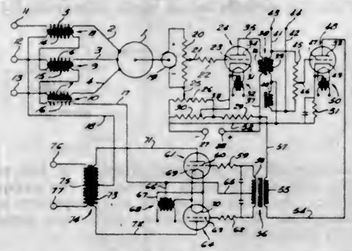
tion, and saturation reactor means having impedance windings adapted to be interposed in the entrance mains of a motor to be controlled and having saturation windings operative when

said switch means, normally extended toggle link mechanism operatively connecting said manually operable means and said switch means, means for normally holding said toggle link mechanism extended and against collapse, spring means tend-

2,462,755
CONTROLLER FOR ELECTRIC MOTOR-DRIVEN TRAVELING DEVICES
Elvind U. Lassen, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a

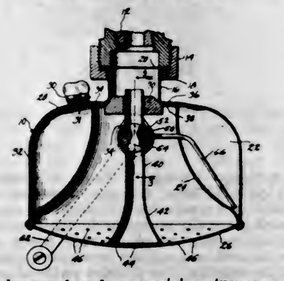
inating in flanges extending inwardly into said shield, said body having ports for the passage of said electric cords and a hole adapted to align with the screw hole of the plate of the wall socket box, said flanges being adapted to be caught under said plate.

tion, and saturation reactor means having impedance windings adapted to be interposed in the entrance mains of a motor to be controlled and having saturation windings operative when



excited to diminish the effective impedance of said impedance windings connected to said amplifying circuit means to be excited by the current supplied thereby.

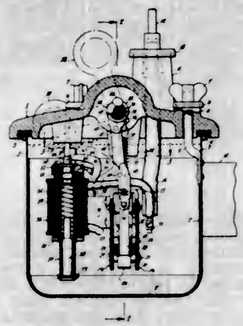
2,462,752
SHOWER HEAD
Frank A. Kotches, Princeton, N. J., and William D. Tipton, Stoneleigh, Md.; said Kotches assignor to William D. Tipton, as trustee, Elizabeth Barrett Tipton executrix of said William D. Tipton, deceased
Application January 10, 1945, Serial No. 572,184
3 Claims. (Cl. 299—84)



1. A shower head comprising inner and outer casing portions disposed in spaced concentric assembled relation to thereby provide a water compartment and a soap compartment, means for filling the soap compartment, means for attaching the assembly to a water pipe, a water discharge tube disposed within the water compartment and communicating with the water pipe, means providing communication between the soap compartment and the discharge tube including venturi means for inducing flow of soap, and valve means operable to cause water from the water pipe to flow through said discharge tube or through said water compartment.

2,462,753
CIRCUIT BREAKER
William D. Kyle, Jr., Milwaukee, and Anthony Van Ryan, South Milwaukee, Wis., assignors to Line Material Company, a corporation of Delaware
Application September 18, 1943, Serial No. 502,856
1 Claim. (Cl. 200—89)

A circuit breaker comprising switch means, manually operable means for opening and closing said switch means, normally extended toggle link mechanism operatively connecting said manually operable means and said switch means, means for normally holding said toggle link mechanism extended and against collapse, spring means tending to collapse said toggle link mechanism, an energizing winding in the form of a solenoid, a fluid retarded plunger adapted to be drawn in-

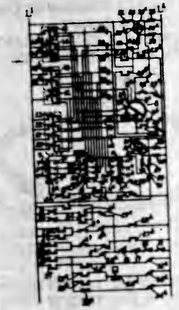


wardly of said winding, a magnetic member movable axially of said winding when the magnetic flux passing through said winding directly to said member exceeds a predetermined value, a partition located within said tube between said plunger and said magnetic member and dividing said tube into separate compartments, and means operated by said magnetic member for initiating the collapse of said toggle link mechanism.

2,462,754
GOLF CLUB
Herbert C. Lagerblade and Donald J. Root, Bristol, Conn., assignors to The Horton Manufacturing Company, Bristol, Conn., a corporation of Connecticut
Application June 14, 1946, Serial No. 676,861
4 Claims. (Cl. 273—80)

3. In a golf club, a metallic hosel having therein a tapering axial bore of generally circular cross section throughout and a tapering hollow metallic shaft of generally circular cross section throughout fitted into said bore, said hosel and shaft having a portion intermediate the ends of the hosel which is of generally oval cross section such that the smallest diameter is less than the diameter of the portions of generally circular cross section immediately above and below said portion and in which the largest diameter is greater than the diameter of the portions of generally circular cross section immediately above and below said portion.

2,462,755
CONTROLLER FOR ELECTRIC MOTOR-DRIVEN TRAVELING DEVICES
Elvind U. Lassen, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Substituted for application Serial No. 498,537, August 13, 1943. This application August 12, 1944, Serial No. 549,258
20 Claims. (Cl. 187—29)

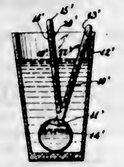


1. In control for an electric motor driven traveling device, the combination with means to effect travel of the device through a plurality of zones, said means including a plurality of push button switches, at least one for each zone of travel served by the device and operable to start said device and direct it to the corresponding zone, of separate condenser type energy storing means conneced in circuit with said push button switches for charging of the former from an energy source upon operation of said switches, electroresponsive means requiring energization for stopping said traveling device and responsive to discharge of any of said energy storing means, and means responsive to the movement of said traveling device to afford discharge of said separate energy storing means which have been charged, in a predetermined order irrespective of the order of actuation of said push button switches, regardless of any temporary failure of the source of charging current, the first mentioned means including means which after each stop of said device as a function of discharge of said energy storing means affords under given conditions automatic restarting.

2,462,756
SHIELD FOR ELECTRIC WALL SOCKETS
John N. Leopold, Staten Island, N. Y.
Application December 20, 1945, Serial No. 636,230
3 Claims. (Cl. 173—330)

1. A shield for protecting electric cord plugs inserted in the sockets of a wall socket box comprising a semi-cylindrical body having end closing walls, each of said end walls being divided into two parts by an openable seam, the edges of said body perpendicular to said end walls terminating in flanges extending inwardly into said shield, said body having ports for the passage of said electric cords and a hole adapted to align with the screw hole of the plate of the wall socket box, said flanges being adapted to be caught under said plate.

2,462,757
COMBINED MIXER AND COOLER FOR DRINKS
Julius Loycs, South Amboy, N. J.
Application May 10, 1946, Serial No. 668,955
3 Claims. (Cl. 62—1)



1. As a new article of manufacture, a combined mixer and cooler for drinks comprising a hollow and thin wall structure involving a bowl and a narrow stem emanating therefrom, said bowl being of a size permitting ready insertion into a conventional drinking glass and a freezable liquid therein which is water and colored, and said stem being sealed, there being another stem emanating at a slight angle from the same point of said bowl, which in its upper part houses a thermometer.

2,462,758
SYNTHETIC DETERGENT COMPOSITIONS
John David Malkemus, Allendale, N. J., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application August 10, 1945, Serial No. 610,200
5 Claims. (Cl. 252—161)

1. A solid detergent composition in the form of dried particles consisting essentially of synthetic organic non-soap water-soluble detergent from the class consisting of sulphates and sulphonates and an amount of organic builder sufficient markedly to improve the foaming properties in aqueous solutions but not over 50% by weight of said synthetic detergent, said builder being selected from the group consisting of the lower monohydric alcohol and glycol esters of higher aliphatic fatty acids.

2,462,759
APPARATUS FOR RECEIVING FREQUENCY-MODULATED WAVES
Claudius T. McCoy, Narberth, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Continuation of application Serial No. 446,954, June 13, 1942. This application March 31, 1944, Serial No. 528,908
17 Claims. (Cl. 250—20)

14. In a frequency modulation receiver, a source of frequency-modulated signal oscillations, an oscillator of controllable frequency for generating a signal whose fundamental frequency is one-nth the mean frequency of said signal oscillations, where n is a small integer other than one, and means operatively associated with said os-

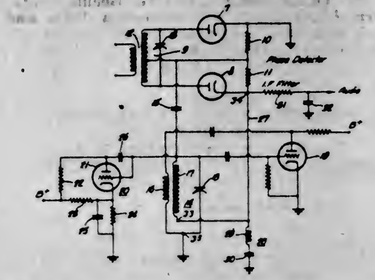
cillator for varying its fundamental frequency and for loosely synchronizing the nth harmonic

a stator ring in contact with the other end of said magnet, a plurality of teeth formed on the inner circumference of said ring, a rotor mounted to rotate within said ring, and a plurality of teeth

from the other of said pairs of points said two pair of radio frequency signals; and means for

2,462,766
TENSION CONTROL APPARATUS
John W. Olson and Charles W. Bechle, Sycamore, Ill., assignors to Anaconda Wire and Cable Company, a corporation of Delaware

cillator for varying its fundamental frequency and for loosely synchronising the nth harmonic

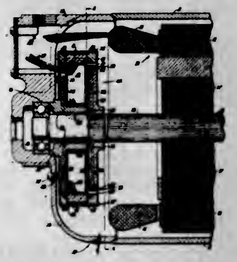


of said oscillator signal with the frequency-modulated signal from said source.

2,462,760
PROTECTIVE COATINGS FOR FRESH FROZEN MEATS
Harold S. Mitchell, Chicago, Lorens E. Kay, Worth, and Andrew S. Hartanov and John M. Ramsbottom, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application November 8, 1944, Serial No. 562,566
8 Claims. (Cl. 99—169)

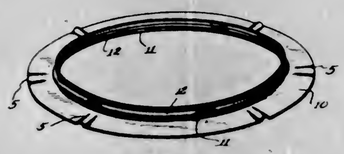
1. A coating composition for meat comprising a base medium, a gelatin phase distributed throughout the medium, and a flour made from a vegetable seed, the flour serving as an anti-sticking agent and being present in sufficient amount to prevent the formation of a tacky mass of carbonized gelatin during cooking of the meat.

2,462,761
INDUCTOR ALTERNATOR
James W. Momberg, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 12, 1946, Serial No. 646,972
11 Claims. (Cl. 171—252)



3. In combination, a driving motor comprising a stator, a rotor and a housing; and an inductor alternator installed within the housing of said driving motor, the inductor alternator comprising a disc frame having a concentrically apertured hub, an armature coil concentrically supported on said hub, a cylindrically shaped permanent magnet surrounding said coil and having one end in contact with one face of said frame, a stator ring in contact with the other end of said magnet, a plurality of teeth formed on the inner circumference of said ring, a rotor mounted to rotate within said ring, and a plurality of teeth formed on the outer circumference of said rotor.

2,462,762
GASKET CENTERING MEANS
William T. Nardin, Moorestown, N. J., assignor to United States Gasket Company, Camden, N. J., a corporation of New Jersey
Application October 19, 1944, Serial No. 559,455
5 Claims. (Cl. 288—27)



1. A centering ring for receiving and retaining gaskets comprising a flat ring portion and a collar portion extending vertically from only one face of said flat ring portion at the inner periphery thereof, said collar portion having a channel parallel to said periphery and being dimensioned and contoured to receive and retain a gasket at its inner face.

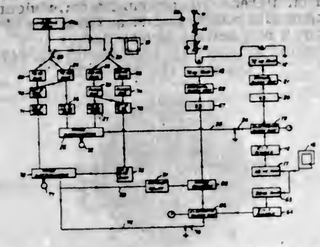
2,462,763
PROTECTIVELY COATED FERROUS METAL SURFACES AND METHOD OF PRODUCING SAME
Victor Charles John Nightingall, deceased, late of Heidelberg, Victoria, Australia, by Ruth Valencia Nightingall, Aubrey Mitchell Old, Charles Montefiore Gladstone Nightingall, James B. Aitken, and Maxwell G. McKenzie, executors, Melbourne, Victoria, Australia, assignors to Di-Met Proprietary Limited, West Melbourne, Victoria, Australia, a corporation of Victoria, Australia
No Drawing. Application November 20, 1948, Serial No. 61,312. In Australia March 20, 1937.
6 Claims. (Cl. 117—127)

1. The method of producing a hard protective coating on a ferrous metal surface which comprises applying to the surface a coating of a composition comprising finely divided metallic zinc incorporated in an aqueous solution of an alkali silicate, the aqueous solution containing about 20% to 40% by weight of the alkali silicate, the zinc being present in amount of about 100% to 350% by weight of said solution, and converting the coating to a substantially insoluble condition by reacting carbon dioxide therewith.

2,462,764
NAVIGATION SYSTEM
William J. O'Brien, London, England, assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain
Application June 3, 1946, Serial No. 673,952
7 Claims. (Cl. 343—105)

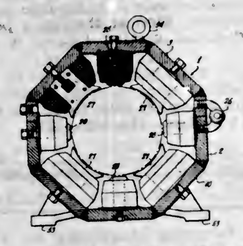
1. In a radio frequency navigational system, the combination of: means for radiating from two pair of spaced points two pair of radio frequency signals of four different frequencies; means for periodically arresting radiation from one of said pairs of points; means for radiating

from the other of said pairs of points said two pair of radio frequency signals; and means for



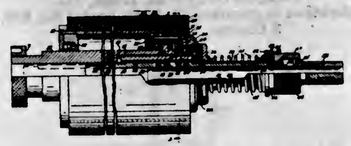
maintaining among all of said signals a fixed multiple phase relation.

2,462,765
WELDED MOTOR FRAME
William J. Oesterlein, Wauwatosa, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application December 13, 1944, Serial No. 567,984
3 Claims. (Cl. 172—36)



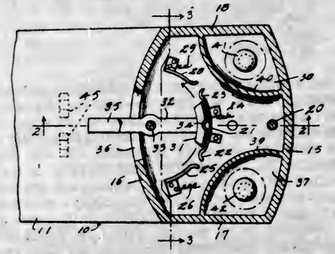
3. In a motor having a welded frame adapted to be hingedly opened a yoke comprising a polygonal central field ring of steel plate, pole pieces extending inwardly from said field ring, yoke extensions of thinner steel plate secured to each side of said field ring by welding, and an end rim at the outer end of each yoke extension secured thereto by welding extending inwardly and terminating at a circular end rim seat having an accurately formed bore and accurately formed oppositely facing transverse abutting surfaces, said yoke being horizontally divided into upper and lower portions at a plane disposed close to and parallel with the axis of said motor; a hinge at one side of said yoke; releasable fastening means on the opposite side of said yoke; a circular bearing housing having a centrally disposed bearing for each end of said motor, said bearing housings having accurately formed circular peripheral faces adapted to snugly engage the bores of said end rim seats and accurately formed oppositely facing transverse abutting surfaces adapted to snugly engage the transverse abutting surface of said end rim seats whereby said upper and lower yoke portions and said bearing housings are positively held longitudinally and transversely with respect to one another by the closing of said motor frame; and brush mountings secured to one of said bearing housings; means adapted to hold said bearing housing against rotation in a predetermined angular position of brush adjustment; and a rotating assembly including a shaft mounted for rotation in the bearings in said housings.

2,462,766
TENSION CONTROL APPARATUS
John W. Olson and Charles W. Beehle, Sycamore, Ill., assignors to Anaconda Wire and Cable Company, a corporation of Delaware
Application May 9, 1946, Serial No. 668,593
4 Claims. (Cl. 242—75)



1. Apparatus adapted to control the tension on material being unwound from a roll comprising a roll carrier rotatably mounted on a support, friction means arranged to provide frictional resistance to rotation of the roll carrier with respect to the support, and mechanical means interconnecting the roll carrier and the support arranged to control the amount of said frictional resistance in proportion to the extent the roll carrier rotates relative to the support in the direction corresponding to unwinding of material from the roll, said mechanical means comprising an epicyclic gear train having first and second main gears provided with different numbers of teeth with the first main gear mounted in fixed position on the roll carrier support and the second main gear mounted for rotation about the axis of said support, the main gears being interconnected by an idler gear assembly mounted on the roll carrier whereby rotation of the roll carrier effects rotation of the second main gear with respect to the fixed first main gear, and means arranged to vary said frictional resistance in response to rotation of the second main gear with respect to the fixed first main gear as the roll carrier rotates with respect to said support.

2,462,767
ACCELERATOR PEDAL AND SWITCH
John J. O'Reilly, Chicago, Ill.
Application June 17, 1946, Serial No. 677,154
3 Claims. (Cl. 200—59)



3. A switch structure for mounting on an accelerator pedal comprising a housing, a central arcuate fixed contact in said housing, offset end portions carried by said contact extending from the concave side of said contact, arcuate contacts spaced from the ends of said central contact, a bridging contact on the concave side of said central contact, a switch arm on said bridging contact and pivoted in said housing, said bridging contact adapted to be disposed between said offset end portions in circuit breaking position, and an offset intermediate portion on said bridging

contact selectively engageable with one of said offset ends of said central contact for holding said bridging contact in circuit closing position.

2,462,770
ELECTRIC CABLE
Walter T. Peirce, Worcester, Mass., assignor to The American Steel and Wire Company of New

said ignitable head, and an ignition tip continuing from the material of said splint defining said opening and on the side thereof diametrically opposite said head and extended across said opening toward said head, said tip being reduced in

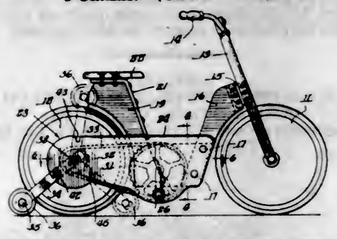
connecting member formed integrally with the panels midway between the ends of said panels, a vertically disposed angle iron at the end of each panel and having one flange embedded in said

contact selectively engageable with one of said offset ends of said central contact for holding said bridging contact in circuit closing position.

2,462,768
PROTECTOR PAD
Douglas Ortleb, St. Louis, Mo.
Application September 27, 1946, Serial No. 699,910
2 Claims. (Cl. 155—196)

1. A protector pad for use in an automobile window or the like, comprising a length of material folded to provide a pair of sections adapted to be positioned on the frame of said window between said frame and the driver's arm, a stiffening member between said sections and adjacent the fold thereof, and resilient retaining means rigidly secured to said stiffening member, said retaining means including a horizontal element adapted to rest upon the frame of said window and a vertical element provided with a bulge which is capable of compression to permit insertion of said vertical element between the frame and the glass of said window but prevents accidental withdrawal therefrom, and said retaining means being incapable of offering interference to the raising or lowering of the glass of said window.

2,462,769
STABILIZABLE BICYCLE
Hayes N. Pedersen, Racine, Wis.
Application February 6, 1946, Serial No. 645,799
4 Claims. (Cl. 280—303)

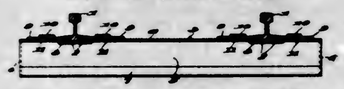


1. In a prior-art type of stabilizing-apparatus, associated with a juvenile-bicycle whose two wheels always engage the floor or ground when the bicycle is in operation, said apparatus having a bracket movably mounted on the bicycle straddling its rear-wheel and having a pair of supplemental transversely registered stabilizing ground-wheels rotatable on said bracket in spaced-apart relation crosswise said rear-wheel and adapted to be moved with the bracket into an operative stabilizing position on the ground or floor, the novel combination of means on said bracket and cooperating means on the body of the bicycle to locate said stabilizing-wheels in one operative position with their common axis ahead of the axis of the bicycle rear-wheel or to locate said stabilizing-wheels in another operative position with their common axis to the rear of the axis of the bicycle rear-wheel, and means to releasably lock said bracket and its wheels in either of said two positions, the stabilizing effect of such wheels being greater in said advanced position than in said rear position.

2,462,770
ELECTRIC CABLE
Walter T. Peirce, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application January 15, 1946, Serial No. 641,264
7 Claims. (Cl. 174—13)

1. A cable comprising a conductor, insulation about the conductor including a liquid, a fluid-tight sheath about the insulation, a tube containing gas disposed within said sheath, an outer tube surrounding and substantially parallel to the first tube and providing a space therebetween, said outer tube having an opening therein for admitting liquid thereto, and a manifold, said outer tube terminating in said manifold, said inner tube opening into said manifold whereby the liquid upon expansion will enter into said inner tube and compress the gas therein.

2,462,771
RAIL FASTENER
Calvin Philips, Seattle, Wash.
Application August 2, 1945, Serial No. 608,528
2 Claims. (Cl. 238—331)



2. A rail fastening comprising an all metal pressed cross tie for a railroad rail having a base, said cross tie having a body portion with a top side provided with a stamped recess with spaced shoulders in position to receive and abut the edges of the base of said rail, and a transverse strap forming a loop affixed to the top side of said tie adjacent said recess, said tie having an opening therein under said strap, a clip extending inwardly through said loop and bridging said opening in position for wedging relation with the base of said rail and adapted to secure the rail positively to the tie, a shoulder on said clip abutting a side of said opening under the strap, whereby said clip is positively locked against lateral movement away from the rail, said clip being a substantially flat plate member.

2,462,772
MATCH SPLINT
Maurice Polacsek, Brooklyn, N. Y.
Application March 21, 1946, Serial No. 656,057
1 Claim. (Cl. 44—44)

A match, comprising a splint of flat material having a reduced end portion, a friction ignitable head formed on said reduced end portion, said splint being formed with an opening adjacent said ignitable head, and an ignition tip continuing from the material of said splint defining said opening and on the side thereof diametrically opposite said head and extended across said opening toward said head, said tip being reduced in width as it proceeds toward said head and said opening being increased in width in a direction toward said head forming small openings on diametrically opposite sides of said ignition tip.

2,462,773
MATCH SPLINT
Maurice Polacsek, Brooklyn, N. Y.
Application March 23, 1946, Serial No. 656,701
4 Claims. (Cl. 44—42)

1. A match packet comprising a card slit to provide single splints, each having a head of ignition material formed on the upper end thereof and a V-shaped notch cut downwardly from the upper end of each splint, to define forked portions turned in opposite directions at their terminal ends to provide a pocket within the splint for the ignition material of the head and a holding means for said material whereby the thickness of the head is less than the thickness of a head of an equal amount of material applied to an unnotched splint and the material is held against disruption when the head is ignited.

2,462,774
NAIL HOLDER AND PUNCH
Neil J. Pollock, Chicago, Ill.
Application November 17, 1945, Serial No. 629,256
1 Claim. (Cl. 1—47)

A tool for driving nails, comprising an elongated shank member, an enlarged head formed integrally with said shank, said enlarged head having its upper forward portion cut away to provide a vertical rear wall and a horizontal forwardly-extending platform portion, said vertical rear wall being provided with a longitudinally-extending groove, and said head being also provided with a half-moon shaped recess extending transversely thereof and communicating with the rear portion of said groove, the rear portion of said head being connected to said platform portion by a semi-circular band of metal enclosing said transverse recess, said head having its lower portion tapering forwardly and inwardly and terminating in a flat end adapted to serve as a punch for nail.

2,462,775
SELF-ADJUSTING SEA WALL
Stanley M. Pontiere, Philadelphia, Pa., assignor of one-half to Emily Pontiere Grillo, Ocean City, N. J.
Application November 22, 1946, Serial No. 711,529
2 Claims. (Cl. 61—39)

1. A sea wall comprising a plurality of sectional units, each unit comprising a pair of spaced parallel panels formed of concrete, a concrete connecting member formed integrally with the panels midway between the ends of said panels, a vertically disposed angle iron at the end of each panel and having one flange embedded in said

end, the other flange being free and projecting inwardly from said panel, and means connecting the free flanges on the adjacent ends of pairs of panels.

2,462,776
COVER FOR OPEN TISSUE ROLL HOLDERS
Robert I. Price, Oakland, Calif.
Application April 13, 1945, Serial No. 588,169
5 Claims. (Cl. 242—55.5)

1. In combination, a wall mounted bracket, a transversely extending roller supported by arms pivotally depending from said bracket, a dispensing roll for toilet paper journaled on said roller, a cylindrical shield supported entirely by said roller and freely oscillatable thereon and entirely enclosing said roll, end walls for said shield having bearings on said roller, said shield comprising hinged semi-cylindrical complementary members, pivotal means for securing said members together, and an axial slot in one member disposed conterminous to the meeting edges of said members for dispensing paper therethrough from said roll.

2,462,777
ELECTRIC SWITCH
Anton Rappl, Eggertsville, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application September 19, 1945, Serial No. 617,338
4 Claims. (Cl. 200—6)

1. A two-way electric switch, comprising a housing, an operating shaft journaled in said housing and having spaced lugs within said housing, tension means yieldably maintaining said shaft in a neutral position, a terminal plate carried by said housing and provided with contact buttons, and a contact arm comprising a dielectric plate carried by the lugs and formed in each of its longitudinal opposite edges with a recess, and a contact-making plate disposed over

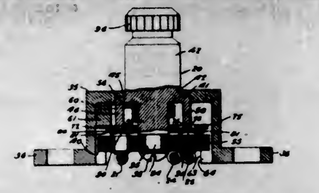
said dielectric plate and secured thereto by tabs formed on said contact-making plate and en-

rotated in either direction of rotation without a corresponding rotation movement of said one of said members, a power screw having a part connected to said other of said members operative

the magnitude of said voltage, and a plurality of indicators spaced along the tube, each indicator

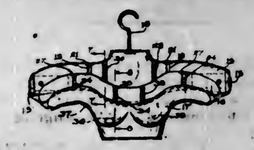
charging well communicating with the adjacent compartment, each of said wells being positioned at the end of the container opposite the end where the two compartments communicate as aforesaid and the communication between each

said dielectric plate and secured thereto by tabs formed on said contact-making plate and en-



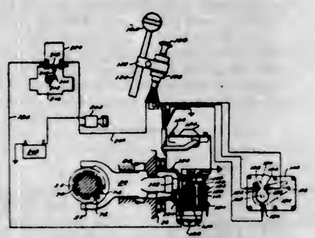
gageable with the recesses of said dielectric plate.

2,462,778
COLLAPSIBLE HANGER
Al Rosen, Brooklyn, N. Y.
Application September 13, 1947, Serial No. 773,560
7 Claims. (Cl. 223—94)



1. A collapsible garment hanger comprising a plurality of overlapping sections, one horizontally ahead of another and in face to face contact with each immediately adjacent section, means for suspending one of said sections, and cooperating means carried by each pair of adjoining sections for connecting said sections to prevent their separation while permitting each section to be lowered relative to an immediately adjoining section.

2,462,779
GEAR SHIFTING MECHANISM
Robert C. Russell, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application April 19, 1945, Serial No. 589,201
20 Claims. (Cl. 74—365)



6. Mechanism for shifting a power transmitting element between two power transmitting positions comprising a pair of axially aligned relatively rotatable members, means coupling one of the members to the power transmitting element, torsion spring means operatively interconnecting said members operable to transmit a turning force from the other of said members to said one of said members when said other of said members is rotated in either direction of rotation without a corresponding rotation movement of said one of said members, a power screw having a part connected to said other of said members operative to rotate said other of said members to build up a turning force on said one of said members operative to shift the power transmitting element upon the cessation of the transmission of a material amount of power therethrough, and a motor connected to another part of the screw for effecting rotation thereof in either direction.

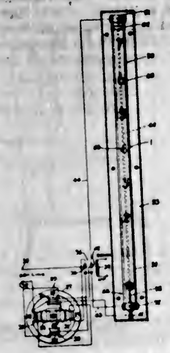
2,462,780
COMBINATION PILLOW ENVELOPE AND BED SHEET
Morris Schiller, Albany, N. Y., assignor of fifty per cent to Anna Verkitus, Albany, N. Y.
Application August 31, 1945, Serial No. 613,819
7 Claim. (Cl. 5—334)

In a combined sheet and permanently attached pillow case assemblage of the class described, in combination, a bed sheet of conventional form, and an empty pillow case open on one side, said pillow case characterized by a substantially rectangular patch of sheet material, three of the marginal edges of said patch being laterally turned inwardly toward each other and overlapped with the body portion of the patch and providing case defining flaps, the adjacent ends of the respective flaps being stitched together, the remaining marginal edge of said case being free of a flap, said remaining edge being stitched to the body portion of the sheet at a point spaced inwardly of the adjacent marginal edges of said sheet in order to hingedly connect the case to said sheet wholly within the confines of the sheet and with the open side of said case against the underlying sheet, whereby when the pillow is stuffed into said case, and is in use, it resides in direct contact with the underlying portion of the sheet.

2,462,781
ELEVATOR POSITION INDICATOR
Joseph R. Schoenbaum, Roseland, N. J., assignor to William Martin, Jr., doing business as Martin Elevator Company, New York, N. Y.
Application June 5, 1946, Serial No. 674,604
4 Claims. (Cl. 177—336)

1. In an elevator system, in combination, a car in an elevator shaft, a drive mechanism including a rotatable member for raising and lowering the car in said shaft, a rotary transformer having a rotor and a stator, said rotor being mechanically coupled to said rotatable member whereby the transformer output voltage is dependent upon the position of the car in the shaft, and an elevator position indicator comprising an elongated gas-filled glow tube, an electrode structure defining a discharge gap at each end of the tube, means for applying said output voltage across one of said discharge gaps to cause the gas within the adjacent portion of the tube to glow, the length of the glowing portion depending upon

the magnitude of said voltage, and a plurality of indicators spaced along the tube, each indicator



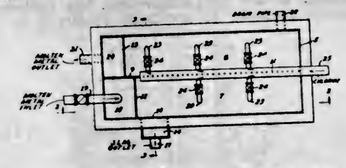
registering when the gas in the adjacent portion of the tube is luminescent.

2,462,782
PRODUCTION OF TOTAQUINE
Jacob B. Shohan, West Orange, N. J., assignor to American Home Products Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application June 6, 1945, Serial No. 597,969
7 Claims. (Cl. 260—284)

3. In a process for recovering purified cinchona alkaloids by acid extraction of vegetable material containing such alkaloids, the steps which comprise: adding to a mineral-acid solution of cinchona alkaloids containing also acid-extractable impurities an alkaline material in amount to reduce the acidity of the solution to about pH 7, thereby selectively precipitating a major portion of the dissolved impurities without substantial precipitation of the desired alkaloids, separating the resultant precipitate from the mother liquor, thereafter adding additional alkaline material to the mother liquor in amount sufficient to bring its alkalinity to at least pH 8, thereby precipitating desired alkaloids, reslurrying the precipitate with water to form a tractable slurry, adding mineral acid to the slurry in controlled amount to bring the acidity of the slurry to about pH 7, thereby selectively dissolving the desired alkaloids, separating undissolved impurities from the solution, and thereafter recovering alkaloids from the solution.

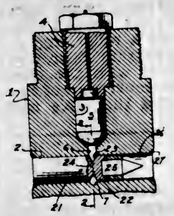
2,462,783
APPARATUS FOR REFINING ZINCIFEROUS LEAD
William Wallace Shropshire, Chicago, Ill., assignor to International Smelting and Refining Company, a corporation of Montana
Original application December 22, 1943, Serial No. 515,231. Divided and this application May 1, 1946, Serial No. 666,432
4 Claims. (Cl. 266—37)

1. An apparatus for treating molten metal comprising a container, a longitudinal partition dividing the container into two adjacent compartments and having approximate one end of the container two openings at different levels permitting communication between said two compartments, a molten metal charging well communicating with one of said compartments and a molten metal discharging well communicating with the adjacent compartment, each of said wells being positioned at the end of the container opposite the end where the two compartments communicate as aforesaid and the communication between each well and its compartment being beneath the upper of said two openings in the partition, an outlet for said molten metal discharging well at



approximately the level of the upper opening in said partition, and a slag-discharge well approximate said charging well and having an opening permitting communication between the slag discharge well and the compartment in communication with said charging well, the opening in the slag-discharge well being at a higher level than said outlet.

2,462,784
WELL PERFORATING GUN
Arthur L. Smith, Torrance, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware
Application November 17, 1941, Serial No. 419,462
16 Claims. (Cl. 164—0.5)



1. In a perforating gun of the character described, the combination of: a gun body having a plurality of gun bores to receive projectiles therein, and means for applying a gas pressure against the inner ends of said projectiles; projectiles in said gun bores; and restraining means at the inner ends of said projectiles operative when the gas pressure against the inner ends of said projectiles has built up to simultaneously release said projectiles so that said gas pressure may then discharge the same at high velocity from said gun bores; destructable liners extending from said projectiles along the walls of said gun bores to the extremities thereof, said projectiles being formed to engage and destroy said liners when the guns are fired; and means sealing the extremities of said liners to the extremities of said bores to exclude fluids in which the gun body may be immersed.

2,462,785
FLUID VELOCITY GOVERNOR
Harold T. Snell, El Paso, Tex.
Application April 10, 1946, Serial No. 661,150
4 Claims. (Cl. 137—152)

1. In a device for governing the amount of air and fuel mixture to an internal combustion en-

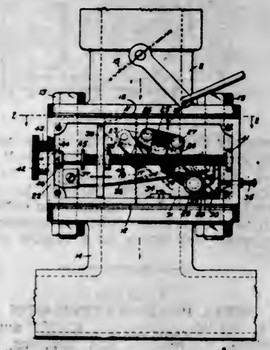
gine, a body having a flow passage extending therethrough, a valve member pivotally mounted on said body and having closing and opening movement in said passage, a suction responsive member pivotally mounted on said body and oper-

flexible and slightly elastic adhesive coating on the exterior of the glove substantially at the said

said base portion, side and end walls projecting upwardly from said floor, flange guage members projecting upwardly from the front of said floor having inner forwardly inclined edges engaging memorandum sheets and a cover at the rear end

tacts being wholly laterally movable to span the pair in the closed circuit position with the

gine, a body having a flow passage extending therethrough, a valve member pivotally mounted on said body and having closing and opening movement in said passage, a suction responsive member pivotally mounted on said body and operable in said passage, means connecting said valve member with said suction responsive member so that the former moves in unison with the latter, checking means connected with the suction responsive member to normally retain it in such



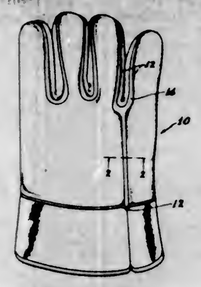
position that the valve member is in a fully open position subject to closing movement in response to suction action exceeding a pre-determined degree, said checking means consisting of an arm connected with the suction responsive member, said arm having a roller, and a crimped spring which coacts with said roller, and resilient means which cooperates with the checking means to cause the return movement of the suction responsive member and the valve member connected therewith.

2,462,786
PACIFIER
Nat P. Steckler, New York, N. Y.
Application August 16, 1946, Serial No. 691,014
2 Claims. (Cl. 128—360)

1. The combination, in a pacifier, of a body portion having a hollow nipple, a guard, gum massaging and teething means around the outer circumferential edge of the said guard, a plurality of reinforced arms emanating from a flat surface of the guard, and a space within the walls of the said nipple, all of one piece, inseparable unitary construction, the said space containing a soft filling, and the said arms adapted to hold a ring, substantially as set forth.

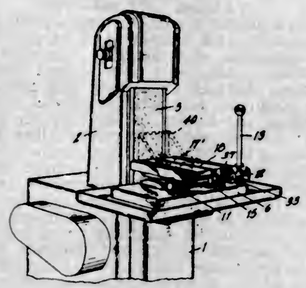
2,462,787
GLOVE OR THE LIKE
Robert Steinberg, Great Neck, N. Y.
Application May 8, 1948, Serial No. 25,829
11 Claims. (Cl. 2—161)

1. In a glove or the like, comprising outer glove sections connected to one another by inturned sewn seams, a narrow thin band of a waterproof, flexible and slightly elastic adhesive coating on the exterior of the glove substantially at the said



seams only, the remainder of the outer glove surface being free of such coating.

2,462,788
WORKTABLE FOR BELT GRINDERS AND THE LIKE
Donald E. Sutton, Kalamazoo, Mich., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich., a corporation of Michigan
Application April 8, 1946, Serial No. 660,352
13 Claims. (Cl. 51—143)



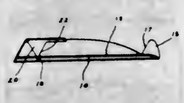
13. In a machine of the class described, the combination with a reciprocatingly mounted carriage, of a work table bed member tiltably mounted on said carriage, a work table slidably mounted on said bed member for movement transversely of the travel of the carriage, a single movement manually operated means for tilting said bed member on its way and reciprocating said table, and an interlocking means on said table and carriage for preventing tilting of said table and disengaged by the reciprocating movement of the table on the bed member.

2,462,789
TWO-PIECE PLASTIC LOOSE-LEAF MEMORANDUM SHEET HOLDER
Martin E. Trollen, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn.
Application November 27, 1944, Serial No. 565,370
5 Claims. (Cl. 281—44)

4. A two-piece plastic loose-leaf memorandum sheet holder, including a base portion, a floor in

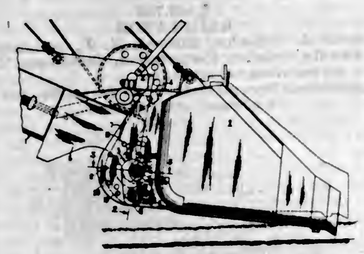
contacted in an alkylation zone with an added olefin stream and a substantially anhydrous aromatic sulfonic acid, whereby said alkylatable hydrocarbon is alkylated and a substantial proportion of said aromatic sulfonic acid is converted to an ester derived from said olefin and aromatic

said base portion, side and end walls projecting upwardly from said floor, flange guage members projecting upwardly from the front of said floor having inner forwardly inclined edges engaging memorandum sheets and a cover at the rear end of said base portion formed separately therefrom



and having a pair of depending flanges which are sealed and secured to said floor to hold said cover rigid, said depending flanges on said cover having inclined edges parallel to said inner inclined edges of said flanged guage members to hold the memorandum sheets between said paralleled edges.

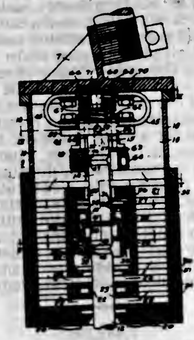
2,462,790
BUCKET STRUCTURE FOR EXCAVATORS AND LOADERS
William G. Van Voorhis, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application June 5, 1946, Serial No. 674,484
8 Claims. (Cl. 214—140)



1. In combination, a boom, a bucket pivoted to the boom for relative movement about a horizontal axis between working position and dumping position, a releasable latch for holding the bucket in working position at a suitable angle relative to the boom, a horizontally disposed pivot pin or shaft for pivotally connecting the bucket to the boom and rotatably carried by the boom, and eccentrics keyed on said pin and rotatably disposed in bearings carried by the bucket whereby the working angle of the bucket relative to the boom can be varied by rotating said pin.

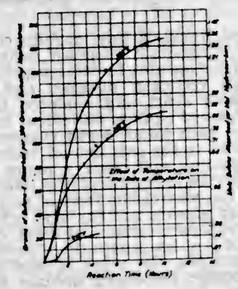
2,462,791
CIRCUIT INTERRUPTER
Oswald von Mehren, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 13, 1945, Serial No. 577,637
15 Claims. (Cl. 200—170)

1. In a circuit interrupter, a pair of contacts cooperable to establish an arc, and one or more independently laterally movable bridging contacts being wholly laterally movable to span the pair in the closed circuit position with the



terminal ends of each bridging contact engaging both the aforesaid contacts.

2,462,792
ALKYLATION PROCESS
Francis T. Wadsworth, Texas City, and Robert J. Lee, La Marque, Tex., assignors to Pan American Refining Corporation, New York, N. Y., a corporation of Delaware
Application August 9, 1945, Serial No. 609,882
6 Claims. (Cl. 260—671)



1. A process for the alkylation of polycyclic aromatic hydrocarbons which comprises introducing an olefin into an alkylation zone and contacting said olefin in said alkylation zone with polycyclic aromatic hydrocarbons and at least 3 mol percent of a substantially anhydrous toluene sulfonic acid at a temperature in the range of about 265 to about 300° F. under sufficient pressure to maintain a liquid phase in said alkylation zone, diluting alkylation reaction products with a saturated hydrocarbon, and separating a phase comprising substantially anhydrous toluene sulfonic acid.

2,462,793
ALKYLATION AND CATALYST RECOVERY
Robert J. Lee, La Marque, Tex., assignor to Pan American Refining Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application August 9, 1945
Serial No. 609,941
8 Claims. (Cl. 260—671)

1. In a process for the alkylation of an alkylatable hydrocarbon wherein said hydrocarbon is

2,462,797
GAS-CLEANING MEANS
Charles C. Whittaker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1946, Serial No. 685,009

2,462,799
CONTROL CIRCUITS
John E. Young, Merchantville, and William E. McCown, Gloucester, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application March 21, 1945, Serial No. 584,020

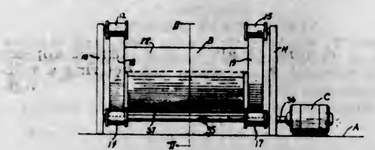
contacted in an alkylation zone with an added olefin stream and a substantially anhydrous aromatic sulfonic acid, whereby said alkylatable hydrocarbon is alkylated and a substantial proportion of said aromatic sulfonic acid is converted to an ester derived from said olefin and aromatic sulfonic acid, the steps which comprise discontinuing the addition of said olefin stream upon completion of the desired alkylation reaction, subjecting the alkylation reaction mixture to a temperature and for a time sufficient to effect substantial conversion of said ester, whereby aromatic sulfonic acid is regenerated, diluting the alkylation reaction mixture with a saturated hydrocarbon in quantity sufficient substantially to reduce the solubility of the aromatic sulfonic acid in the alkylation reaction mixture, whereby the aromatic sulfonic acid separates as a distinct stratum from the alkylation reaction products, and recovering aromatic sulfonic acids so produced.

2,462,794

APPARATUS FOR CENTRIFUGAL CASTING

William H. Walter, Chicago, Ill.

Application November 5, 1945, Serial No. 626,588
4 Claims. (Cl. 22—65)



4. A centrifugal casting machine comprising a generally horizontally disposed casting cylinder having an end opening for the reception of molten metal, two vertically disposed end rings laterally spaced apart and mounted for rotation and constrained against movement towards and away from each other, a rod connected to said rings parallel to the axis thereof, rollers supporting and guiding said rings, a motor having its shaft connected to certain of said rollers to rotate the rings, the confronting faces of said rings having annular grooves therein, said cylinder comprising a two-part cylindrical mold, one part of which mold is of less length than the distance between said rings, the other of said mold parts having endwise projecting arcuate flanges entered in the grooves of said end rings to thereby mount the mold on said rings, the first named of said mold parts and said rod having cooperating cam means for jamming said rod against said cylinder to hold said mold parts closed and for rotating said mold in the same direction and about the same axis as said rings are driven by the motor.

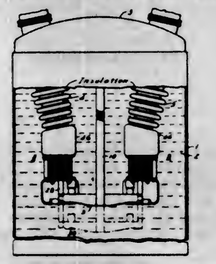
2,462,795

CIRCUIT INTERRUPTER

Josephine R. Webb and Herbert J. Webb, Forest Hills, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 13, 1945, Serial No. 572,593
8 Claims. (Cl. 200—150)

1. In a circuit interrupter of the liquid break type, an arc extinguishing structure forming a pressure chamber, a first contact cooperable with a second contact to establish a pressure-generating arc within the pressure chamber, a third contact cooperable with said first contact to establish a second serially related interrupting arc, operating means for said interrupter for moving said third contact to an open circuit position, a first piston means connected to said second contact and arranged to be acted on at one side thereof by the pressure within the pressure chamber, a second piston means and an insulating liquid filled conduit connecting the other side of said first piston means to said second piston means, said second piston means



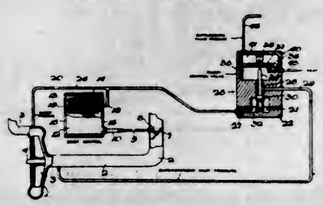
being actuated by the opening movement of said third contact to cause a reduction in pressure in said conduit whereby the pressure in said pressure chamber acts in conjunction with the reduced pressure in said conduit to cause opening of said second contact substantially at the same time upon opening movement of said third contact and to maintain said second contact open during interruption of the arcs.

2,462,796

REGULATOR

Harold A. Wheeler, Alwood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application December 11, 1944, Serial No. 567,668
6 Claims. (Cl. 123—25)



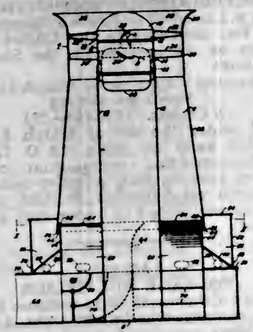
1. A device of the character described, comprising, in combination, a conduit for conducting a superatmospheric pressure medium, said conduit having a restricted orifice positioned therein intermediate the inlet and outlet of said conduit and an airleak therein at the outlet side of said restricted orifice, a first valve member for opening and closing said air leak, a second valve member for regulating said airleak, spring means positioned between said first and second valve members for biasing said valve members in a direction for closing said airleak, operator-operated means for controlling said first valve member, and differential pressure responsive means for operating said second valve member upon said first valve member being in an open position, said differential pressure responsive means being responsive to the difference between the pressures at the inlet and outlet of said restricted orifice and arranged to operate said second valve member so as to maintain a predetermined substantially constant differential between the pressures at the inlet and outlet of said restricted orifice.

2,462,797

GAS-CLEANING MEANS

Charles C. Whittaker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 20, 1946, Serial No. 685,009
2 Claims. (Cl. 183—36)



1. A gas-cleaning means comprising, in combination, upstanding nested walls forming a gas-passage having a gas inlet at one end, said nested walls comprising an inner tubular member and an outer tubular member bounding said gas-passage; draft-inducing means comprising vanes and a propeller for establishing a draft through said gas-passage with the gas whirling about said inner tubular member; a gas-divider intermediate upstanding tubular wall inside of but spaced from an end of said outer tubular member; a horizontal wall having an opening receiving said intermediate wall end extending outwardly therefrom; additional walls cooperating with said horizontal wall, said intermediate wall, and said end of said outer tubular member for providing a dirt-receiving duct; a second horizontal wall below the said first horizontal wall; said inner tubular member extending downwardly to said second horizontal wall; said first and said second horizontal walls cooperating with further walls to form an outlet duct extending outwardly from said intermediate wall and said inner tubular member; vanes between said inner tubular member and said intermediate wall for reducing the whirl of gas flowing therebetween; and vane means and divider-wall means in the space between said first and said second horizontal walls for directing gas leaving said vanes longitudinally into said outlet duct.

2,462,798

MANUFACTURE OF DESICCANTS

Robert C. Wilson, Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application April 16, 1946, Serial No. 662,455
12 Claims. (Cl. 252—300)

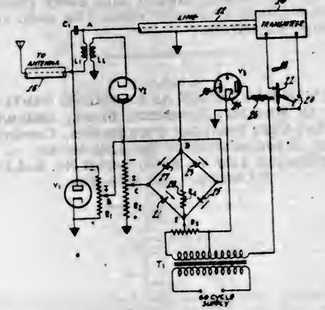
1. A process for manufacture of adsorbent silica gel which comprises gelling a silica hydrosol to thereby form a hydrogel containing zeolytic alkali metal, reducing the temperature of the resultant hydrogel promptly after gelation, maintaining the temperature of the hydrogel below that at which gelation occurred without substantial base exchange during a substantial period of time before syneresis is complete, and thereafter base exchanging to remove zeolytic alkali metal, washing and drying the hydrogel.

2,462,799

CONTROL CIRCUITS

John E. Young, Merchantville, and William E. McCown, Gloucester, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application March 21, 1945, Serial No. 584,020
5 Claims. (Cl. 250—17)



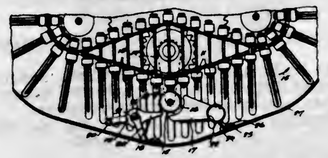
1. In electrical apparatus for controlling the operativeness of a radio or equivalent circuit wherein continuous alternating current appears during operation, a rectifier for deriving a voltage the magnitude of which depends on the voltage in said circuit, a second rectifier for deriving a voltage the magnitude of which depends on the intensity of the current in said circuit, a bridge circuit connected to said recifiers for comparing said derived voltages, and a tube coupled to said bridge circuit and subjected to changes in said derived voltages for controlling the operativeness of said circuit in the same sense by changes in either direction in the magnitudes of either of the compared voltages.

2,462,800

DOFFING MECHANISM FOR COTTON HARVESTERS

Charles R. Berry, Vicksburg, Miss.; Ruby M. Berry administratrix of said Charles R. Berry, deceased

Application October 16, 1943, Serial No. 506,543
2 Claims. (Cl. 56—30)



1. In a cotton picker, doffing mechanism comprising: supporting structure; a doffing element rotatably carried by the supporting structure and having a generally circular periphery for engaging and carrying cotton; a receiver at one side of and adjacent to the doffing element so that the doffing element rotates toward the receiver, said receiver being in the form of a hood having a mouth shaped to embrace a portion of the periphery of the doffing element; means mounting the receiver on the supporting structure for adjustment of the receiver toward and away from the doffing element to vary the embracing relationship between said receiver and said doffing element; an air blast nozzle at the

other side of the doffing element for directing a blast of air in a path generally tangent to the periphery of the doffing element and generally in the direction of rotation of said element and

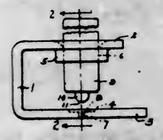
at one end, a coaxial pin in combination with said punch, said pin having head and neck portions at its outermost end for attachment to a socket member through an opening thereof

layer of glass; and a member having an inlet above the said outlet of the pipe communicating

annular stream of glass, said shaping element comprising a plurality of superposed substantially annular glass-intercepting members forming a hollow, substantially cylindrical shaping ele-

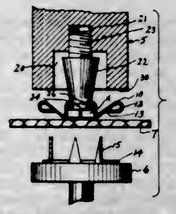
other side of the doffing element for directing a blast of air in a path generally tangent to the periphery of the doffing element and generally in the direction of rotation of said element and toward the receiver so that cotton is dislodged from the doffing element and directed into the mouth of the receiver; and means mounting the nozzle on the supporting structure for adjustment of the nozzle toward and away from the doffing element generally along the path of air discharge therefrom.

2,462,801
SNAP FASTENER ATTACHING TOOL
Clyde D. Buckley, Needham, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application July 10, 1945, Serial No. 604,165
3 Claims. (Cl. 218—20)



1. A device for attaching snap fastener members to textile, paper and like materials comprising a supporting member having a base portion and a superposed arm portion parallel thereto, said superposed arm portion having a guide opening therein and said base portion having a fastener-part-receiving recess therein coaxially arranged with respect to the guide opening and adapted to receive a first fastener-part, said base portion being further provided with a coaxial opening of smaller diameter than said recess and extending a substantial distance below the plane of the bottom of said recess, the joining edge between the wall of said opening and the bottom of said recess presenting a sharp edge, and a combined punch and setting member slidably mounted in said guide opening having a projection extending axially therefrom and formed to press a piece of material positioned against said sharp edge to perforate it or to support and force a second fastener-part into cooperative engagement with the first fastener-part with the material clamped therebetween.

2,462,802
HOLDER FOR FASTENER ATTACHING MEANS
Clyde D. Buckley, Stamford, Conn., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application January 7, 1946, Serial No. 639,635
2 Claims. (Cl. 218—5)



1. A snap fastener socket attaching means comprising a punch having an annular portion at one end, a coaxial pin in combination with said punch, said pin having head and neck portions at its outermost end for attachment to a socket member through an opening thereof.

2,462,803
FIREPROOFING COMPOSITIONS
Kenneth S. Campbell and Jack E. Sands, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 23, 1945, Serial No. 584,484
9 Claims. (Cl. 260—28)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A flameproofing composition comprising chlorinated paraffin wax, a water-soluble urea-formaldehyde condensation product, and antimony oxide, emulsified in water with an emulsifying agent.

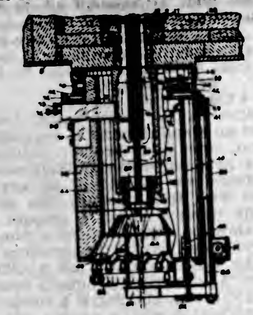
2,462,804
VOLTAGE MULTIPLIER
Don Canady, Cincinnati, Ohio, assignor to Dayton Acme Company, Cincinnati, Ohio, a corporation of Ohio
Application January 14, 1947, Serial No. 721,967
1 Claim. (Cl. 171—97)

A voltage multiplier comprising a rotary member, a pair of collector rings on one end of said member, a second pair of discharge collector rings on the other end of said rotary member, split rings between said pairs of rings, brushes contacting all of said rings, said brushes contacting said first named pair of collector rings connected to a source of electrical supply, said brushes contacting said intermediate split rings connected in pairs with a condenser interposed therein, said second pair of discharge collector rings having brushes having a condenser connected thereacross, and means connecting said split rings to said full rings whereby during the revolution of said rotary member said intermediate condensers will be alternately connected in parallel to said supply and alternately connected in series to said discharge collector rings.

2,462,805
APPARATUS FOR FORMING GLASS TUBING, RODS AND THE LIKE
Edward Danner, Newark, Ohio
Application December 17, 1941, Serial No. 423,255
6 Claims. (Cl. 49—17.1)

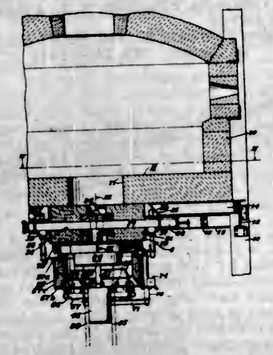
2. In an apparatus for forming glass articles, a container for containing molten glass having an outlet; a conduit positioned below the outlet; means for flowing glass downwardly and spreading the glass in thin layer form over the inner surface of the conduit; a source of supply of air; a pipe connected to the source and having an outlet near the lower end of the conduit for flowing cooling air upwardly over the surface of the

layer of glass; and a member having an inlet above the said outlet of the pipe communicating



with said conduit for removing air from within said conduit.

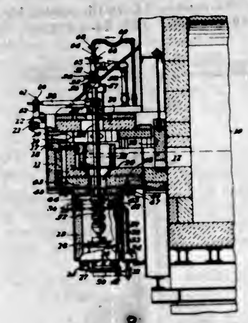
2,462,806
GLASSWARE FORMING APPARATUS
Edward Danner, Newark, Ohio
Application December 21, 1943, Serial No. 515,089
28 Claims. (Cl. 49—17.1)



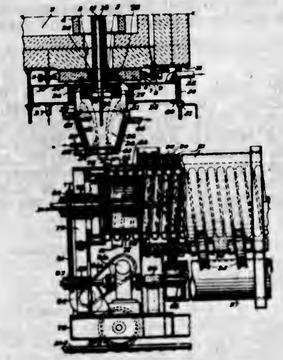
24. Glassware forming apparatus comprising a source of molten glass, a wall having an orifice therethrough communicating with the source of molten glass and providing a downwardly flowing stream of molten glass, a conduit intersecting said orifice, a shaping element positioned to receive the downwardly flowing stream of glass, means extending into the conduit for supporting the shaping element, and means for adjusting the shaping element supporting means vertically with respect to said wall containing said orifice.

2,462,807
APPARATUS FOR THE MANUFACTURE OF TUBULAR GLASSWARE
Edward Danner, Newark, Ohio
Application April 4, 1944, Serial No. 529,462
18 Claims. (Cl. 49—17.1)

1. In apparatus for forming tubular glassware, a source of molten glass, means for forming the glass into a downwardly flowing annular stream, a glass shaping element, and means for supporting the shaping element in the path of said stream, said supporting means extending axially of and vertically through the downwardly flowing annular stream of glass, said shaping element comprising a plurality of superposed substantially annular glass-intercepting members forming a hollow, substantially cylindrical shaping element, whereby the glass as it passes downwardly over the shaping element is intercepted repeatedly by said glass intercepting members and flows freely out of contact with the element as it passes from one member to another.



2,462,808
MANUFACTURE OF TUBULAR GLASSWARE
Edward Danner, Newark, Ohio
Application July 16, 1945, Serial No. 605,335
14 Claims. (Cl. 49—1)



1. Apparatus for the continuous manufacture of glass tubing in spiral form comprising a source of molten glass, a shaping element positioned to receive molten glass from said source and to preliminarily shape it into tubular form, a drum positioned to receive the preliminarily shaped tube, means for rotating the drum, stationary means cooperating with the drum for causing the shaped tube to be wound in spiral form thereon as the drum is rotated, said drum having friction means at the tube receiving end for providing friction between the tube and the drum as it is wound thereon, and conveying means for receiving the spirally shaped tube as it is continuously discharged from the other end of said drum.

2,462,809
ADJUSTABLE STOP FOR GATE VALVES
Edmond P. De Craene, Westchester, Ill., assignor

2,462,811
PROTEIN WATER PAINT VEHICLES HAVING INCREASED WET ABRASION RESISTANCE

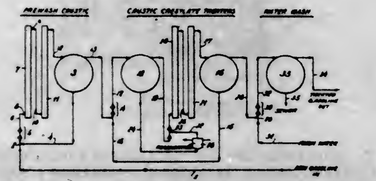
2,462,814
WALKER OR TOY VEHICLE
Alfred Rodrigues, Chicago, Ill., assignor to James

and advance chambers respectively, said pull-back valve being connected to said source, and said operating valve being connected to said pull-back valve, a discharge line connected to said

2,462,808
ADJUSTABLE STOP FOR GATE VALVES
Edmond P. De Crane, Westchester, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application November 13, 1945, Serial No. 628,029
14 Claims. (Cl. 74—424.8)

1. In an adjustable position stop mechanism for valves of the character described, the combination including a yoke and a threaded reciprocably movable stem, a yoke sleeve threadedly journalled upon the said stem, means supporting the said yoke sleeve, means reciprocably movable relative to and supported by the said yoke sleeve upon predetermined rotation of the said yoke sleeve, and stop means cooperating with said reciprocably movable means to limit the axial movement of the said stem relative to the said yoke and yoke sleeve.

2,462,810
PROCESS FOR THE SEPARATION OF AN EMULSION OF PETROLEUM OIL AND AQUEOUS SOLUTION CONTAINING ADDED ALKALI METAL SALTS OF CRESOLS
Leslie Lee Ferguson, East St. Louis, Ill., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application March 20, 1946, Serial No. 655,877
2 Claims. (Cl. 196—30)

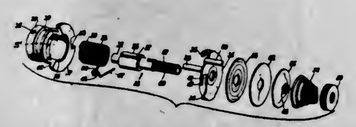


1. In the separation of an emulsion of petroleum oil and aqueous solution of alkali metal hydroxide containing added alkali metal salts of cresols used to remove mercaptans, said aqueous solution having a viscosity of 3.5 centistokes, the improvement which comprises flowing a mixture through a vertical confined space of dimensions of oil, aqueous solution and emulsion upward such as to provide a residence time therein of at least 7 minutes for said oil, aqueous solution and emulsion at a liquid velocity of 0.06 to about 0.12 foot per second.

2,462,811
PROTEIN WATER PAINT VEHICLES HAVING INCREASED WET ABRASION RESISTANCE
James C. Kenen and Burton W. Schroeder, Minneapolis, Minn., assignors to Archer-Daniels-Midland Company, a corporation of Delaware
No Drawing. Application October 18, 1944, Serial No. 559,239
4 Claims. (Cl. 106—154)

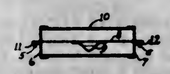
1. A vehicle for a water paint consisting essentially of an alkali dispersible vegetable protein material, lime as a protein insolubilizing agent, and a heat polymerized alkali metal salt of the condensation product of an aryl alkyl sulfonic acid with formaldehyde, the said salt being initially water soluble, in amount to increase wet abrasion resistance of a film made from the vehicle, and having the structure represented by the type formula $(A.R.A')SO_3M$ in which A and A' designate aromatic groups, R is a lower alkyl group, and SO_3M a sulfonic acid group in combination with a soluble salt forming metal represented by M.

2,462,812
THREAD-TENSION DEVICE FOR SEWING MACHINES
Frank Parry and Berthold P. Pinkvoss, Bridgeport, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 9, 1946, Serial No. 646,603
10 Claims. (Cl. 242—150)



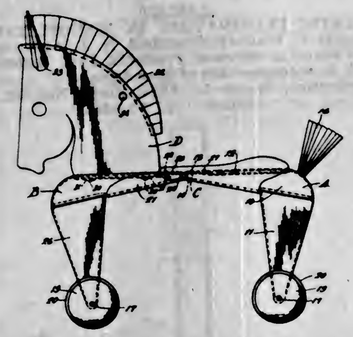
1. In a thread tensioning device for sewing machines, a support formed with a flange, an arbor carried by said support, spring-pressed opposed tension-disks mounted upon said arbor, a thread-guide carrying abutment-plate disposed adjacent one of said tension-disks, and interlocking means between the flange of the support and the abutment-plate providing for relative turning adjustment of said support and abutment-plate and for confining said abutment-plate against sidewise movement.

2,462,813
GETTER STRUCTURE
Leopold Reiner, Orange, N. J., assignor to United Electronics Company, Newark, N. J., a corporation of New Jersey
Application June 18, 1946, Serial No. 677,461
8 Claims. (Cl. 250—27.5)



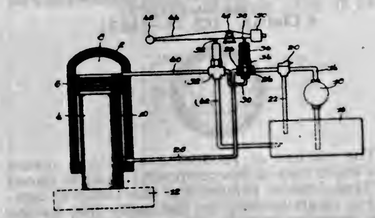
1. A getter structure for an electronic tube comprising a getter, a flat plate supporting said getter intermediate the ends of said plate, a transparent tube surrounding said getter and plate, and end members fixed to said plate at either end thereof and holding said tube, each of said end members being apertured to provide vents.

2,462,814
WALKER OR TOY VEHICLE
Alfred Rodriquez, Chicago, Ill., assignor to James F. Barnes, Jean O. Reinecke, Margaret M. Barnes, and Esther Reinecke, Chicago, Ill.
Application August 17, 1945, Serial No. 610,965
2 Claims. (Cl. 280—1.10)



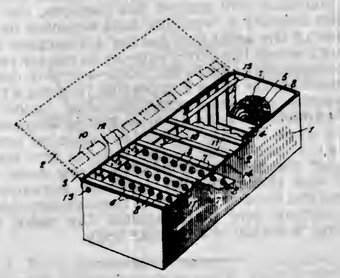
2. A walker toy, comprising a pair of body members tapering inwardly toward each other to provide a constriction, wheel-equipped leg members extending downwardly from said body members, a spring connecting said body members, said body members providing seat portions on opposite sides of said constriction which lie in substantially the same plane when said spring is unflexed, and a resilient cushion extending over said constricted portion to provide a seat on opposite sides of said constriction, said cushion having a top surface which is substantially straight to permit the operator to shift from one side to the other of said constriction, whereby in the depressing and releasing of said spring, said toy is caused to go in forward and backward directions.

2,462,815
VALVE SYSTEM FOR HYDRAULIC PRESS CIRCUITS
Robert K. Sedgwick, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application June 26, 1944, Serial No. 542,095
10 Claims. (Cl. 60—52)



10. In a hydraulic machine, hydraulic motor means including advance and pull-back chambers of relatively large and small cross-sectional areas respectively, and ram means reciprocal within said chambers, and a hydraulic circuit including a source of hydraulic pressure fluid, pull-back and operating valves connected to said pull-back and advance chambers respectively, said pull-back valve being connected to said source, and said operating valve being connected to said pull-back valve, a discharge line connected to said operating valve, said operating valve being adapted in its closed position to restrict flow of fluid to said discharge line, said pull-back valve being adapted in its closed position to restrict flow of said fluid to said operating valve, and operating means for alternately opening and closing respective valves in such manner that one of said valves is open when the other thereof is closed.

2,462,816
DISPENSING CABINET
Charles Schner, Jr., Hewlett, and Frank Zeiser, Stewart Manor, N. Y., assignors, by direct and mesne assignments, to Sentinel Products, Incorporated, New York, N. Y., a corporation of New York
Application August 10, 1946, Serial No. 689,752
1 Claim. (Cl. 312—39)



In a cabinet from which are dispensed in strip form small articles individually mounted on cards, said cabinet being of the type comprising a box adapted to hold a plurality of strips of article bearing cards, a cover having a square front edge and having positioned above and corresponding to each strip a slot through which said strip passes, and means within said box for guiding each strip to its particular slot, a plurality of flanges mounted on said cover in such manner that two of such flanges co-operate with each slot, said flanges extending rearwardly of each slot far enough to overlie and hold in place a card indicating the price of the article being dispensed from that slot, and extending forwardly of each slot far enough to position a strip as it emerges from its slot, and regulate its path across the cover to the front edge thereof, whence the number of articles desired by a customer may be severed from the main body of the strip.

2,462,817
COPOLYMERS OF TETRA-ALLYL PENTAERYTHRITOL
Lee T. Smith, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application April 26, 1946, Serial No. 665,039
6 Claims. (Cl. 260—85.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A resin comprising a copolymer of 10 to 50 parts of tetra-allyl pentaerythritol and 90 to 50 parts of methyl methacrylate.

2,462,818
CABLE CONNECTOR

plate intermediate said openings and projecting into said transmission case whereby oil set in

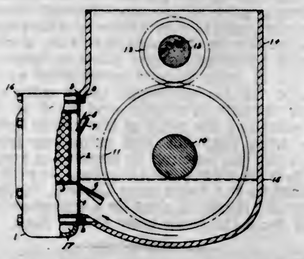
that said material is distributed and compacted, stopping the rotation of said drum, and insert-

coil said disc having a diameter less than the length of the said pointer; a set of radial graduations carried by the disc said graduations being

2,462,818
CABLE CONNECTOR
George C. Thomas, Jr., Elizabeth, and Carroll A. Badeau, Westfield, N. J., assignors to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey
Application December 29, 1945, Serial No. 637,906
1 Claim. (Cl. 285—6.5)

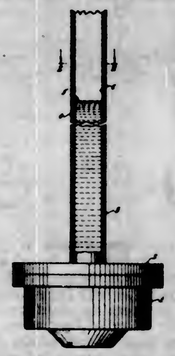
A cable connector comprising a tubular body adapted to have its inner end anchored in an electrical-box hole and its outer end to receive a cable, a straight-wall portion formed in the outer end of the tubular body, a screw extending through a screw-threaded hole in said body and alongside the straight-wall portion toward one side of the cable, a yoke-like clamping saddle mounted astride the outer end wall of the body and freely movable in operative relation thereto, and including two spaced flat portions, one flat portion forming a retaining arm mounted on the outside of the body and having a clearance hole through which the screw extends to loosely retain the clamping saddle in its freely-movable operative position, the other flat portion forming a freely-movable clamping plate mounted inside the body at one side of the cable and being disposed in a plane at an angle to that of the retaining arm as well as at an angle to the axis of the screw, whereby the tightening of said screw cams the inner end thereof under pressure engagement against the angular surface of the clamping plate, thus forcing said plate against the cable and securing it within the tubular body.

2,462,819
TRANSMISSION OIL FILTER MEANS
Herbert H. Trail, Kalamazoo, Mich., assignor to Fuller Manufacturing Company, Kalamazoo, Mich., a corporation of Delaware
Application July 3, 1944, Serial No. 543,239½
7 Claims. (Cl. 184—13)



1. A filter device for cleaning oil in a geared transmission case having an opening in the radial path of a rotatable gear, comprising; a filter casing secured over said opening to act as a cover therefor; a plate interposed between said casings substantially closing said opening; the said plate having an inlet and an outlet opening; a filter element through which oil may pass to be cleansed, said element disposed within said filter case and having its inlet communicated with said inlet opening and its outlet communicated with said outlet opening, said inlet and outlet openings spaced apart in the direction of travel of said gear, of baffles formed on or secured to said plate intermediate said openings and projecting into said transmission case whereby oil set in motion by rotation of said gear is forced into said inlet opening and away from said outlet opening to cause circulation of the oil through said filter element.

2,462,820
STATIC ELIMINATION IN MANOMETERS
Charles F. Wallace, Westfield, N. J., assignor to Wallace & Tiernan Products, Inc., Belleville, N. J., a corporation of New Jersey
Application March 12, 1945, Serial No. 582,340
2 Claims. (Cl. 73—401)



1. A manometer, comprising a non-metallic and non-electric conducting tube containing a liquid, the level of the surface of which in said tube is indicative of the magnitude of a condition, and an electrically conducting coating inside said tube and in contact with said tube and with the liquid therein for bleeding off static electricity on the inside of said tube, so as to prevent any effect of such static electricity upon the level of the surface of the liquid in said tube.

2,462,821
METHOD OF MAKING COMPOSITE ARTICLES
Samuel K. Wellman, Cleveland Heights, Ohio, assignor to The S. K. Wellman Company, Cleveland, Ohio, a corporation of Ohio
Substituted for abandoned application Serial No. 477,568, March 1, 1943. This application January 22, 1945, Serial No. 573,907
4 Claims. (Cl. 29—152.2)

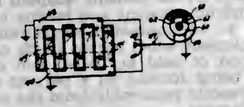
1. The method of producing a friction facing on the inner face of the peripheral annular flange of a brake drum comprising the steps of providing a clean surface on the inner face of the flange, rapidly rotating said drum about the axis of the drum, uniformly supplying a measured amount of powdered friction material to said clean surface, said powdered material comprising a mixture of powdered metals with minor amounts of powdered nonmetallic friction material, controlling the speed of rotation of the drum and the feed of the powdered material so

that said material is distributed and compacted, stopping the rotation of said drum, and inserting a segmented annular member having an outside diameter substantially the same as the inner diameter of the distributed powder layer, then rapidly rotating said drum and applying heat to the powdered material whereby a dense sintered friction facing is produced on the inner face of the flange.

2,462,822
VARIABLE INDUCTANCE
Frank Wood, Elmhurst, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application April 19, 1946, Serial No. 663,279
1 Claim. (Cl. 171—242)

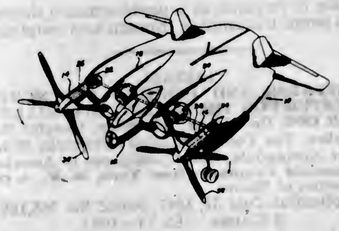
A variable inductance assembly, comprising, a tubular coil form having a plurality of longitudinal ribs formed on the internal surface of said form, a winding wound about the periphery of said coil form, a threaded core member movably positioned within said coil form to adjust the magnitude of the inductance of said winding, a resilient plastic-like tubular shaped insert between said core member and the inner surface of said form and having longitudinally extending corrugations on the internal surface of said insert, said insert being adapted to have threads formed on the internal surface thereof when said core member is driven into said coil form, and said resilient insert exerting a pressure against said ribs upon introduction of said core member sufficient to prevent movement of said insert with respect to said coil form.

2,462,823
PHOTOELECTRIC CELL COLOR TEMPERATURE MEASURING DEVICE
Horace Letellier Woodward, Jr., Arlington, Va., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application May 31, 1945, Serial No. 596,917
3 Claims. (Cl. 88—22.5)



1. A direct reading color temperature meter comprising a first photocell having a red filter fixed over the light active surface; a second photocell having a blue filter fixed over the light active surface said second photocell being disposed immediately adjacent to the first photocell; an instrument having a movable coil carrying a pointer; a switch selectively operable to connect one or the other of said photocells individually to said movable coil; a rotatable disc pivoted about the extended axis of the movable coil said disc having a diameter less than the length of the said pointer; a set of radial graduations carried by the disc said graduations being marked in color temperature values; and an index mark carried by said disc said index mark settable in alinement with the pointer when the first photocell is connected to the movable coil, whereby the pointer will cooperate with the radial graduations on the disc when the second photocell is connected to the movable coil thereby providing a direct reading of the color temperature of the light source to which the photocells are exposed.

2,462,824
SINGLE OR MULTIENGINED DRIVE FOR PLURAL AIRSCREWS
Charles H. Zimmerman, Nichols, and Henry J. Rapuano, Milford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 3, 1944, Serial No. 561,811
14 Claims. (Cl. 244—60)



1. In a power transmission mechanism, driving and driven members, a sun gear connected to one of said members, an internal ring gear rotatable about the axis of said sun gear, a planetary pinion meshing with said sun and ring gears and a carrier therefor connected to the other of said members, means for rotating said sun gear, ring gear and planetary pinion as a unit about the axis of said sun gear including clutch mechanism disposed around the axis of said sun gear having sets of cooperating annular friction clutch rings rotatable with said sun and ring gears respectively, and means also rotatable with said gears including hydraulic cylinder and piston means arranged coaxially with said clutch rings, means for constantly venting fluid from said cylinder means for disengaging said clutch mechanism, and means for supplying fluid to said cylinder means at a rate of flow greater than the flow through said venting means for engaging said clutch mechanism.

2,462,825
AUTOMATIC DECLUTCHING MEANS FOR MULTIENGINE DRIVES
Charles H. Zimmerman, Nichols, and Henry J. Rapuano, Milford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 3, 1944, Serial No. 561,812
23 Claims. (Cl. 192—85)

1. In a power transmission mechanism, a power input member, a power output member, a coupling having two elements flexibly connected together, one of which is connected to one of said members, means for releasably connecting the other coupling element with the other of said members, and means for controlling the release of said connect-

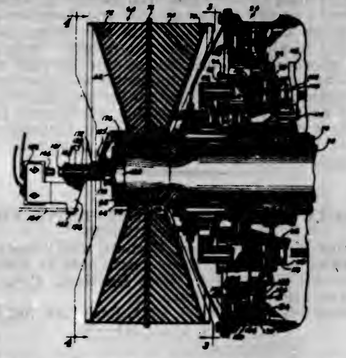
ing means including cooperating members rotatable with said coupling elements and relatively

surfaces located in a plane common to the axis of rotation of said members and clamping mem-

extending disc rigidly attached to the shank forwardly of the hook element, a flexible bait simu-

at a point spaced from the forward opening, said loop removably receiving the shank and hook, and inclined resilient guards arranged in advance

ing means including cooperating members rotatable with said coupling elements and relatively



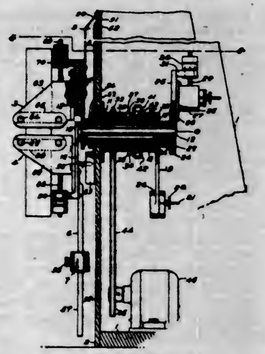
movable in response to a predetermined decrease in the power transmitted through said coupling.

2,462,826

STIFFNESS AND BENDING STRENGTH TESTER FOR THIN SHEET MATERIALS

Russell Dick De Waard, Riverside, Charles Rule Stryker, Cos Cob, and Albert Franklin Blockman, Springdale, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application July 31, 1947, Serial No. 765,166
3 Claims. (Cl. 73—100)



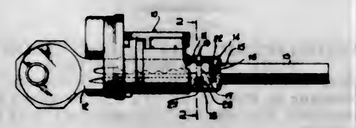
1. An apparatus for testing the stiffness of thin sheet materials comprising a pair of rotatable members mounted independently for relative rotation about a common axis, one of said members comprising a hollow cylindrical sleeve having a radially disposed plate extension at one end thereof, the other of said members comprising a shaft journaled within said sleeve and having a plate extension at the corresponding end thereof oppositely radially disposed to the plate extension of the sleeve, calibrated adjustable means carried by each one of said plate extensions for attaching a test strip of material to both of the plate extensions of the relatively rotatable members, comprising plates slidably and adjustably mounted on said plate extensions, said plates carrying test strip clamping devices comprising fixed clamping surfaces located in a plane common to the axis of rotation of said members and clamping members operable to secure the test strip against the clamping surfaces, said calibrated adjustable means being operable to set said clamping devices on each plate extension equidistant from the axis of rotation on said strip and adjustable to vary the distance of said clamping devices from said axis, driving means for positively rotating said sleeve and plate extension at a predetermined angular velocity whereby said shaft and plate extension is relatively rotated through resistance of the test strip to bending, comprising an electric motor, a belt and sprocket assembly in actuating relation between said motor and said sleeve, and a lever operated clutch means interposed between said belt and sprocket assembly and said sleeve extension for releasably engaging said sleeve in driven position, an adjustably weighted pendulum arm carried by the plate extension of said shaft for exerting a progressively increasing force opposing resistance of said test strip to bending upon continued relative rotation of said shaft and plate extension from a normal position of rest, a calibrated adjustable counterbalancing device for said shaft and plate extension mounted on the shaft so that said shaft and plate extension is maintained in static counterbalance regardless of distance of the clamping device from said axis of rotation whereby the weighted pendulum arm is the sole force exerting factor, a pointer carried by said plate extension of the sleeve, another pointer independently mounted for rotation about the axis and actuated upon rotation of said shaft and plate extension, and a scale for indicating in conjunction with the pointers the angular displacement of the relatively rotatable members.

2,462,827

LOCK MECHANISM

Henry J. Feldmann, Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application October 1, 1946, Serial No. 700,522
13 Claims. (Cl. 70—379)



1. In a lock of the class described, a rotatable key plug, a driving element rotatable with said key plug, a driven element adapted for rotation by said driving element and having two surfaces adapted to be contacted sequentially by said driving element when moved in its driving path by rotation of said key plug, and one of said surfaces being formed on a part of said driven element readily removable from the path of said driving element.

2,462,828

BAIT CASTING AND TROLLING LURE

Edwin H. Parnell, Sr., Greenville, S. C.

Application September 7, 1945, Serial No. 614,835
8 Claims. (Cl. 43—33)

1. A bait casting and trolling lure, comprising a shank provided at its forward end with line attaching means and having an upwardly extending hook element near its rear end, a downwardly

extending disc rigidly attached to the shank forwardly of the hook element, a flexible bait simulating member arranged above the shank and having an opening near its forward end to receive the forward end of the shank, the forward end of the member being arranged forwardly of the

disc and engaging therewith, the disc holding the member against rearward longitudinal movement upon the shank and preventing it from turning upon its longitudinal axis to any considerable extent with relation to the shank, a loop arranged beneath the member and secured to the member at a point spaced from the forward opening, said loop removably receiving the shank and hook, and inclined resilient guards arranged in advance of the hook and mounted upon the flexible member.

2,462,829

PREPARATION OF OIL SOLUBLE PETROLEUM SULFONATES

Paul M. Ruedrich, Berkeley, Calif., assignor to Griffin Chemical Company, a corporation of California

Application May 28, 1946, Serial No. 672,881
3 Claims. (Cl. 260—504)

1. A process for producing oil soluble petroleum sulfonates from a petroleum oil comprising adding to the oil prior to sulfonation thereof between about 5% and about 15% on the weight of the oil of an oil soluble petroleum sulfonate, and adding concentrated sulfuric acid to the oil in the presence of the added petroleum sulfonate.

152,765

DESIGN FOR A CARTON

Joseph Binder, New York, N. Y., assignor to Pepsi-Cola Company, Long Island City, N. Y., a corporation of Delaware

Application October 15, 1947, Serial No. 779,744
Term of patent 14 years

152,767

DESIGN FOR A TOY WATER GUN

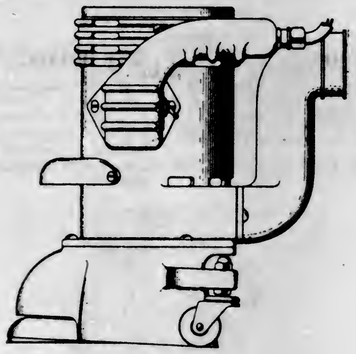
William E. Braham, Los Angeles, Calif.

Application [illegible], Serial No. [illegible]
Term of patent 14 years

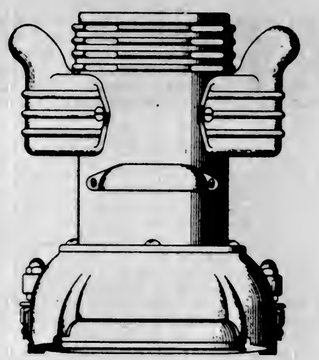
DESIGNS

FEBRUARY 22, 1949

152,763
DESIGN FOR A SANDING MACHINE
Kenneth C. Atkin, Muskegon, Mich., assignor to Clarke Sanding Machine Company, Muskegon, Mich., a corporation of Michigan
Application April 14, 1948, Serial No. 145,701
Term of patent 14 years
(Cl. D9—2)

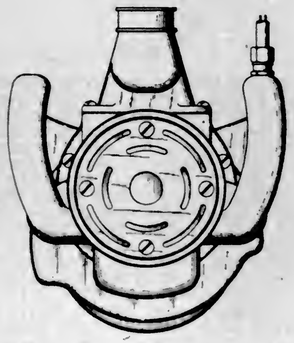


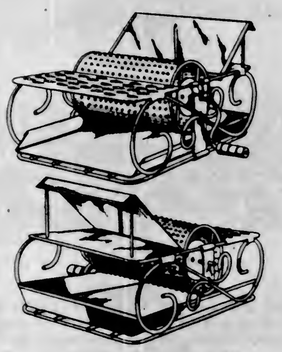
152,763—Continued



The ornamental design for a sanding machine, substantially as shown.

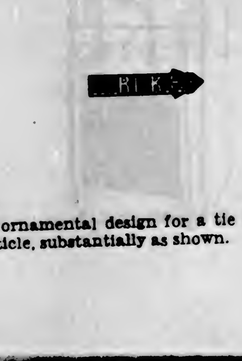
152,764
DESIGN FOR A COMBINED GRATER AND RECEPTACLE
Charlie J. Bassett, Fairfax, Ala.
Application January 27, 1948, Serial No. 144,067
Term of patent 3½ years
(Cl. D69—1)





The ornamental design for a combined grater and receptacle, as shown.

152,769
DESIGN FOR A THERMOSTATIC CONTROL GAS VALVE UNIT OR SIMILAR ARTICLE
Frederick Ellis, Jr., Cleveland, Ohio, assignor to Fenwal, Inc., Ashland, Mass., a corporation of Massachusetts
Application May 1, 1946, Serial No. 129,191
Term of patent 3½ years
(Cl. D58—12)



The ornamental design for a carton, as shown.

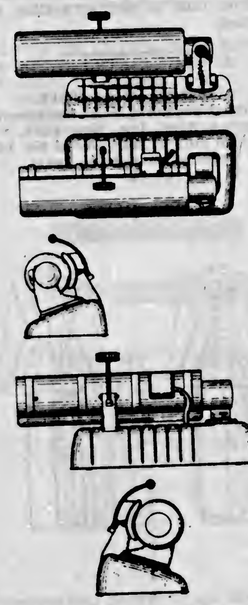
152,766
DESIGN FOR A TIE CLASP OR SIMILAR ARTICLE
Charles Birnbaum, Brooklyn, N. Y.
Application April 5, 1947, Serial No. 138,184
Term of patent 7 years
(Cl. D17—10)

The ornamental design for a tie clasp or similar article, substantially as shown.

152,767
DESIGN FOR A TOY WATER GUN
William E. Braham, Los Angeles, Calif.
Application July 29, 1946, Serial No. 132,090
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a toy water gun, substantially as shown.

152,768
DESIGN FOR A PORTABLE IRONING MACHINE
Allan L. Briggs, Jamestown, N. Y., assignor to Blackstone Corporation, Jamestown, N. Y., a corporation of New York
Application August 16, 1948, Serial No. 148,130
Term of patent 14 years
(Cl. D49—1)

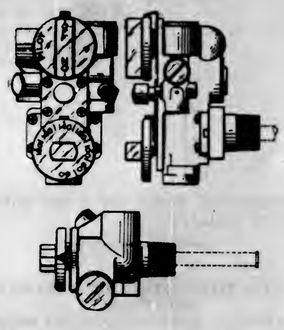


The ornamental design for a portable ironing machine, substantially as shown.

152,772—Continued

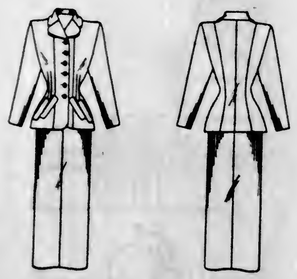
152,774
DESIGN FOR AN EXTENSIBLE BAND FOR A WATCH BRACELET OR SIMILAR ARTICLE
Hans J. Duester, Chicago, Ill., assignor to

152,769
DESIGN FOR A THERMOSTATIC CONTROL GAS VALVE UNIT OR SIMILAR ARTICLE
Michael J. Caparone, Monterey Park, Calif., assignor to Grayson Heat Control, Ltd., Lynwood, Calif., a corporation of California
Application January 27, 1947, Serial No. 136,462
Term of patent 14 years
(Cl. D61—2)



The ornamental design for a thermostatic control gas valve unit or similar article, as shown and described.

152,770
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application July 9, 1948, Serial No. 147,475
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a suit, substantially as shown.

152,771
DESIGN FOR A TELEPHONE DIALING IMPLEMENT
Horace F. Cutler, Malden, Mass.
Application February 17, 1948, Serial No. 144,544
Term of patent 14 years
(Cl. D26—14)

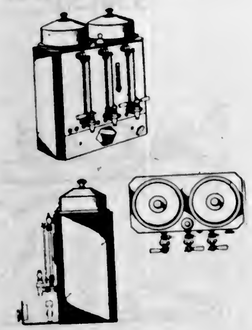
The ornamental design for a telephone dialing implement, as shown.

152,772
DESIGN FOR A BEVERAGE DISPENSER
Stephen V. Dawson, Evanston, Ill., assignor to Orange-Crush Company, Chicago, Ill., a corporation of Illinois
Application October 27, 1947, Serial No. 142,152
Term of patent 14 years
(Cl. D2—3)

152,772—Continued

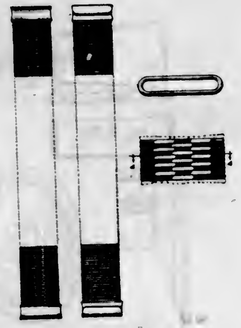
The ornamental design for a beverage dispenser, as shown and described.

152,773
DESIGN FOR A COFFEE URN
Thomas C. Donaldson, North Hollywood, Calif.
Application March 19, 1947, Serial No. 137,740
Term of patent 14 years
(Cl. D44—26)



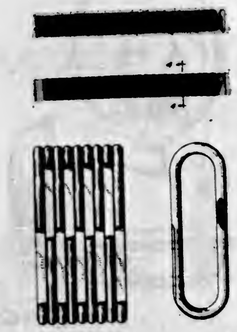
The ornamental design for a coffee urn, as shown and described.

152,774
DESIGN FOR AN EXTENSIBLE BAND FOR A WATCH BRACELET OR SIMILAR ARTICLE
Hans J. Duester, Chicago, Ill., assignor to himself and John Major, Chicago, Ill.
Application August 20, 1948, Serial No. 148,214
Term of patent 14 years
(Cl. D45—4)



The ornamental design for an extensible band for a watch bracelet or similar article, as shown and described.

152,775
DESIGN FOR AN EXTENSIBLE BAND FOR A WATCH BRACELET OR SIMILAR ARTICLE
Hans J. Duester, Chicago, Ill., assignor to himself and John Major, Chicago, Ill.
Application September 3, 1948, Serial No. 148,446
Term of patent 14 years
(Cl. D45—4)



The ornamental design for an extensible band for a watch bracelet or similar article, as shown and described.

152,776
DESIGN FOR AN ADVERTISING

152,778
DESIGN FOR AN AIR BLOWER

152,780
DESIGN FOR A PORTABLE IRONER

152,782
DESIGN FOR A PUSH-BUTTON SWITCH

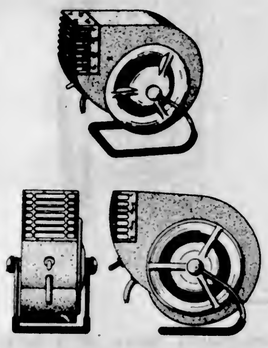
152,776
DESIGN FOR AN ADVERTISING DISPLAY SIGN
Charles L. Dwinell, Kansas City, Mo.
Application January 19, 1948, Serial No. 143,877
Term of patent 14 years
(Cl. D1—12)

The ornamental design for an advertising display sign, as shown.

152,777
DESIGN FOR A DISPLAY FIXTURE
Charles L. Dwinell, Kansas City, Mo.
Application January 26, 1948, Serial No. 144,028
Term of patent 14 years
(Cl. D80—9)

The ornamental design for a display fixture, as shown.

152,778
DESIGN FOR AN AIR BLOWER
Wilfred R. Fox, Owosso, Mich., assignor to Redmond Company, Inc., Owosso, Mich., a corporation of Michigan
Application November 21, 1947, Serial No. 142,718
Term of patent 14 years
(Cl. D62—4)

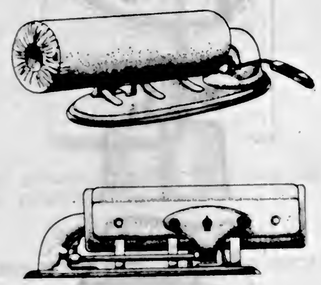


The ornamental design for an air blower, substantially as shown and described.

152,779
DESIGN FOR A TIE CLASP
Arthur Gesten, Newark, N. J.
Application February 7, 1947, Serial No. 136,771
Term of patent 7 years
(Cl. D17—10)

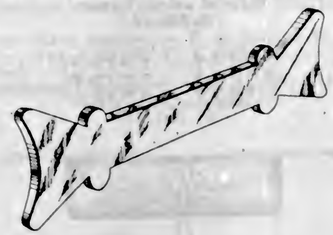
The ornamental design for a tie clasp, as shown.

152,780
DESIGN FOR A PORTABLE IRONER
John J. Getgey, Cincinnati, Ohio, assignor, by mesne assignments, to Empire Ironer, Inc., Cincinnati, Ohio, a corporation of Ohio
Application January 25, 1947, Serial No. 136,405
Term of patent 14 years
(Cl. D49—1)



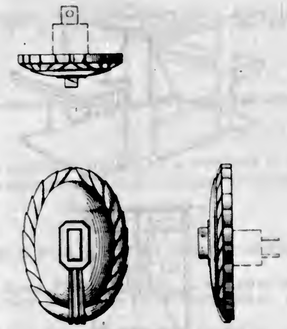
The ornamental design for a portable ironer, substantially as shown.

152,781
DESIGN FOR A TIRE EXPANDING TOOL
George E. Gier, Covington, Ky.
Application December 22, 1947, Serial No. 143,278
Term of patent 3½ years
(Cl. D54—13)



The ornamental design for a tire expanding tool, as shown.

152,782
DESIGN FOR A PUSH-BUTTON SWITCH
Lurelle V. A. Guild, Noroton, Conn.
Application October 22, 1947, Serial No. 142,076
Term of patent 14 years
(Cl. D26—13)



The ornamental design for a push-button switch, substantially as shown and described.

152,783
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Lester L. Hess, New York, N. Y.
Application November 30, 1948, Serial No. 149,880
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

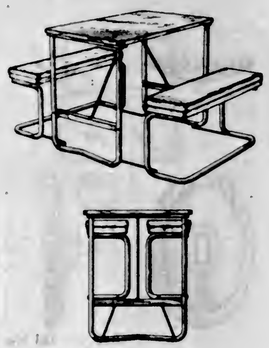
152,784
DESIGN FOR A COMBINATION TABLE AND

152,786
DESIGN FOR AN ELECTRIC STEAM IRON

152,788
DESIGN FOR A NOTE-PAD CONTAINER
Albert Kaser, Glendale, Calif.

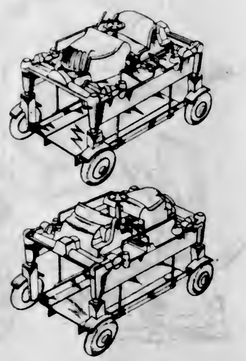
152,791
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE

152,784
DESIGN FOR A COMBINATION TABLE AND FOLDABLE BENCHES
Joseph C. Higgins, Chicago, Ill.
Application June 2, 1947, Serial No. 139,399
Term of patent 14 years
(Cl. D32—14)



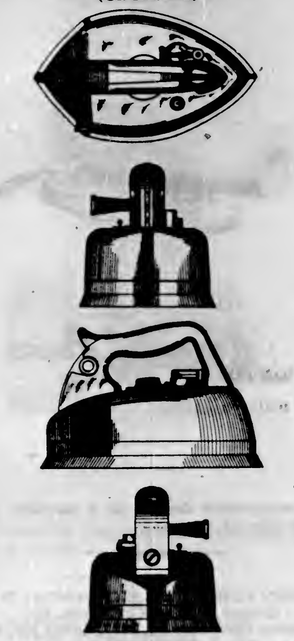
The ornamental design for a combination table and foldable benches, as shown.

152,785
DESIGN FOR A TOY VEHICLE
Thomas K. Hillard, Oakland, Calif.
Application July 22, 1946, Serial No. 131,819
Term of patent 7 years
(Cl. D34—15)



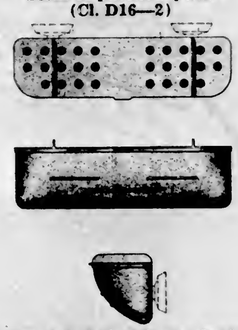
The ornamental design for a toy vehicle, substantially as shown.

152,786
DESIGN FOR AN ELECTRIC STEAM IRON
Russell I. Huffman, Dover, Ohio, assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Application April 15, 1947, Serial No. 138,413
Term of patent 14 years
(Cl. D48—6)



The ornamental design for an electric steam iron, substantially as shown.

152,787
DESIGN FOR A DEODORANT CONTAINER
Arthur J. Kangas, Detroit, Mich.
Application November 10, 1947, Serial No. 142,438
Term of patent 7 years
(Cl. D16—2)



The ornamental design for a deodorant container, as shown.

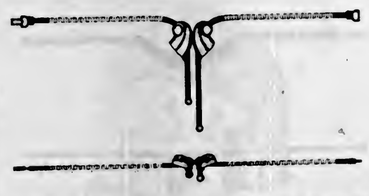
152,788
DESIGN FOR A NOTE-PAD CONTAINER
Albert Kaser, Glendale, Calif.
Application June 28, 1947, Serial No. 139,989
Term of patent 7 years
(Cl. D74—1)

The ornamental design for a note-pad container, substantially as shown.

152,789
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,941
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,790
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,943
Term of patent 7 years
(Cl. D45—16)

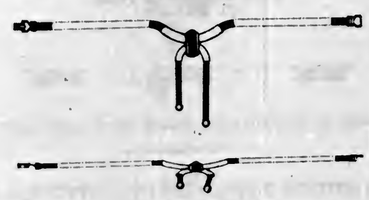


The ornamental design for a necklace or similar article, substantially as shown and described.

152,791
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,944
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,792
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,945
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

152,793
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,946
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,794
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,947
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,795
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,948
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,796
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,949
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,797
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,950
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,800
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,951
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,801
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,952
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,802
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,953
Term of patent 7 years
(Cl. D45—16)

152,802—Continued

The ornamental design for a necklace or similar article, substantially as shown and described.

152,794
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,947
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,795
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,949
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,796
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,950
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,797
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,951
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,798
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 3, 1948, Serial No. 149,952
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,799
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,991
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,800
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 4, 1948, Serial No. 149,999
Term of patent 7 years
(Cl. D45—16)

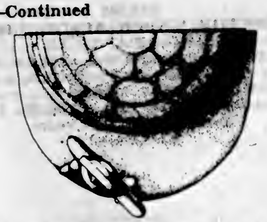
The ornamental design for a necklace or similar article, substantially as shown and described.

152,801
DESIGN FOR A FINDING FOR JEWELRY
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application December 10, 1948, Serial No. 150,075
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a finding for jewelry, substantially as shown.

152,802
DESIGN FOR A BOOK END
Henry Edgar Kelley, Jr., Kirkwood, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky., a corporation of Delaware
Application April 15, 1947, Serial No. 138,415
Term of patent 3½ years
(Cl. D33—1)

152,802—Continued



The ornamental design for a book end, as shown.

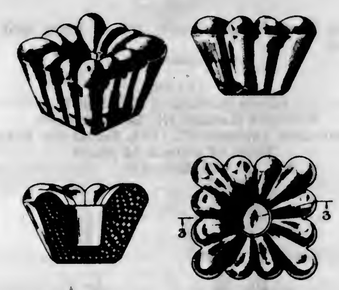
152,803
DESIGN FOR A NECKTIE
Nickolas Keramaris, Detroit, Mich.
Application January 27, 1948, Serial No. 144,076
Term of patent 14 years
(Cl. D3—16)

The ornamental design for a necktie, as shown.

152,804
DESIGN FOR A GLASS CANDLE HOLDER OR SIMILAR ARTICLE
Horace King, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a corporation of Ohio
Application June 14, 1947, Serial No. 139,682
Term of patent 14 years
(Cl. D48—2)

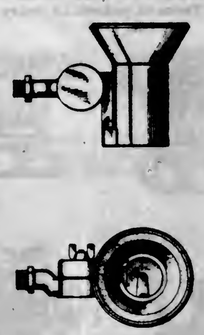
The ornamental design for a glass candle holder or similar article, substantially as shown.

152,805
DESIGN FOR A GLASS CANDLE HOLDER OR SIMILAR ARTICLE
Horace King, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a corporation of Ohio
Application June 14, 1947, Serial No. 139,683
Term of patent 14 years
(Cl. D48—2)



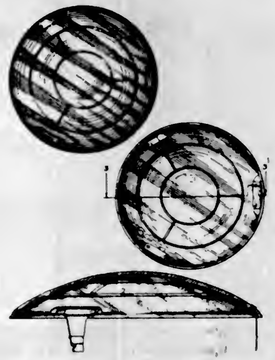
The ornamental design for a glass candle holder or similar article, substantially as shown.

152,806
DESIGN FOR A FLOODLIGHT HOLDER
William H. Klein, Great Neck, N. Y., assignor to The Franklin Company, a firm composed of Henry Henricksen, William H. Klein, and Erasmo E. Spagnoli, Woodside, N. Y.
Application January 21, 1948, Serial No. 143,946
Term of patent 3½ years
(Cl. D48—20)



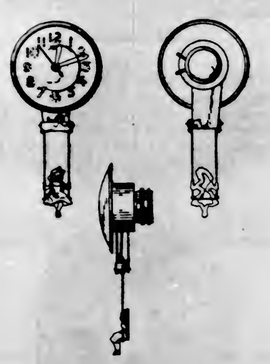
The ornamental design for a floodlight holder, as shown.

152,807
DESIGN FOR A FOG LENS
Bernard L. Latousek, Los Angeles, Calif.
Application May 14, 1947, Serial No. 139,035
Term of patent 7 years
(Cl. D48—32)



The ornamental design for a fog lens, as shown and described.

152,808
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill., assignor to Mastercrafters Clock & Radio Co., Chicago, Ill., a corporation of Illinois
Application August 23, 1948, Serial No. 148,259
Term of patent 14 years
(Cl. D42—7)

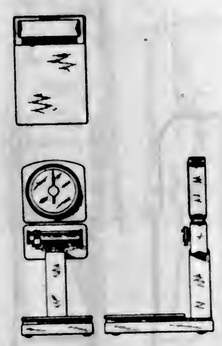


The ornamental design for a clock, substantially as shown.

152,809
DESIGN FOR A PRESSURE CONTROL REGULATOR
Wilbur J. MacCauley, Santa Monica, Calif., assignor to H. E. Lynn & Company, Inc., Santa Monica, Calif., a corporation of California
Application September 16, 1947, Serial No. 141,443
Term of patent 14 years
(Cl. D78—1)

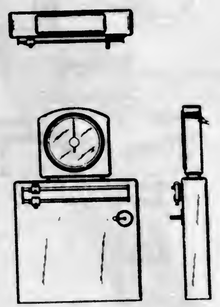
The ornamental design for a pressure control regulator, substantially as shown.

152,810
DESIGN FOR A WEIGHING SCALE
Leonard Maguire, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application December 28, 1946, Serial No. 135,825
Term of patent 14 years
(Cl. D52—10)



The ornamental design for a weighing scale, substantially as shown.

152,811
DESIGN FOR A WEIGHING SCALE
Leonard Maguire, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application December 28, 1946, Serial No. 135,826
Term of patent 14 years
(Cl. D52—10)



The ornamental design for a weighing scale, substantially as shown.

152,812
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,004
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

152,813
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,005
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

152,814
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,006
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

152,815
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,007
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

152,816
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,008
Term of patent 14 years
(Cl. D16—2)

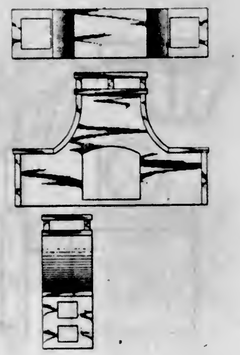
The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

152,817
DESIGN FOR A PORTABLE FIRE EXTINGUISHER OR SIMILAR ARTICLE
Daniel Mapes, West Caldwell, N. J.
Application March 9, 1948, Serial No. 145,009
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable fire extinguisher or similar article, substantially as shown.

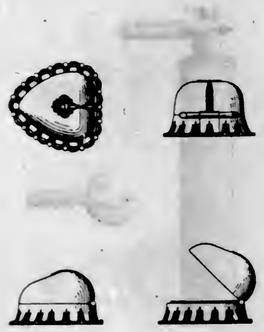
152,818

152,813
DESIGN FOR A MULTIPLE FIREPLACE FOR OUTDOOR USE
William V. Maselli, Woodbridge, Conn.
Application August 23, 1947, Serial No. 141,028
Term of patent 14 years
(Cl. D81—10)



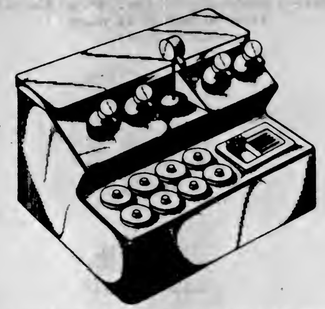
The ornamental design for a multiple fireplace for outdoor use, substantially as shown.

152,814
DESIGN FOR A BOX OR THE LIKE
Henry P. McGovern, Fayville, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application March 28, 1947, Serial No. 138,016
Term of patent 3½ years
(Cl. D53—13)



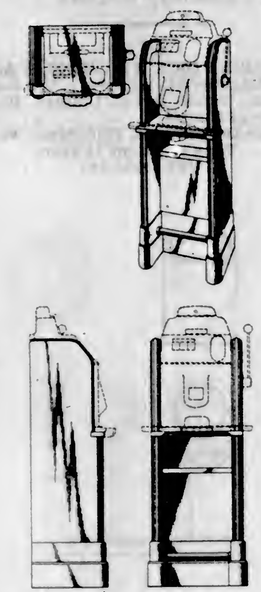
The ornamental design for a box or the like, substantially as shown.

152,815
DESIGN FOR A TOY SODA FOUNTAIN
Stephen P. Mideuhas, Bristol, Pa.
Application May 23, 1947, Serial No. 139,227
Term of patent 7 years
(Cl. D34—15)



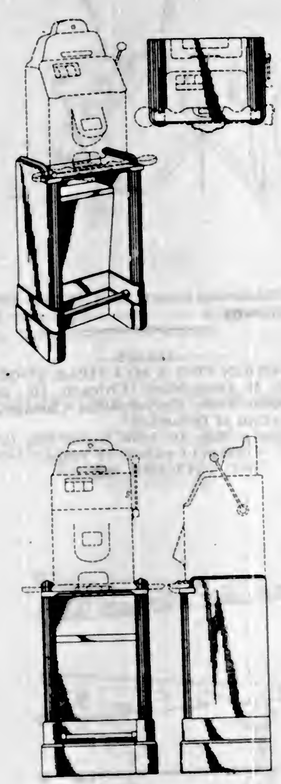
The ornamental design for a toy soda fountain, as shown.

152,816
DESIGN FOR A COIN OPERATED AMUSEMENT MACHINE OR THE LIKE
Emery Mihalek, Chicago, Ill., assignor to O. D. Jennings & Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1947, Serial No. 140,918
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a coin operated amusement machine or the like, as shown and described.

152,817
DESIGN FOR A COIN OPERATED AMUSEMENT MACHINE OR THE LIKE
Emery Mihalek, Chicago, Ill., assignor to O. D. Jennings & Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1947, Serial No. 140,919
Term of patent 14 years
(Cl. D52—3)

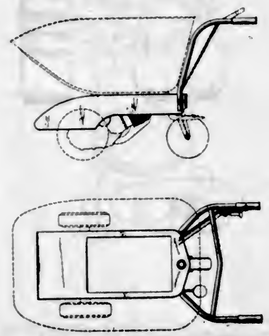


The ornamental design for a coin operated amusement machine or the like, as shown and described.

152,818
DESIGN FOR A VENETIAN BLIND SLAT
Harry Nelson, New York, N. Y., assignor to Lorentzen Hardware Mf'g. Corp., New York, N. Y., a corporation of New York
Application April 27, 1946, Serial No. 129,028
Term of patent 14 years
(Cl. D21—6)

The ornamental design for a Venetian blind slat, substantially as shown.

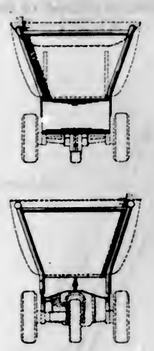
152,819
DESIGN FOR A VEHICLE FRAME
Roy A. Noble, Lewiston, and Wallace I. Youngs, Buffalo, N. Y., assignors to Bell Aircraft Corporation, Wheatfield, N. Y.
Application February 5, 1947, Serial No. 136,698
Term of patent 14 years
(Cl. D14—3)



substantially as shown.

described.

152,819—Continued

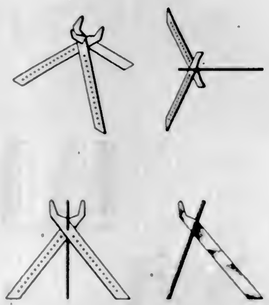


The ornamental design for a vehicle frame, as shown and described.

152,820
DESIGN FOR A BOTTLE
Leo G. Nunes, New York, N. Y., assignor to Conti Products Corporation, Brooklyn, N. Y., a corporation of New York
Application January 18, 1947, Serial No. 136,251
Term of patent 14 years
(Cl. D58—6)

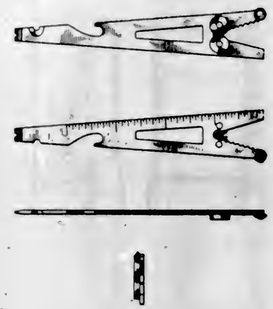
The ornamental design for a bottle, as shown.

152,821
DESIGN FOR A RINGTOSS GAME TARGET
James R. O'Neil, San Francisco, Calif.
Application April 14, 1947, Serial No. 138,387
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a ringtoss game target, as shown.

152,822
DESIGN FOR A MULTIPLE TOOL
Ellsworth B. Overshiner, Chicago, Ill., assignor to Electra Voice Corporation, Chicago, Ill., a corporation of Delaware
Application May 10, 1946, Serial No. 129,551
Term of patent 14 years
(Cl. D54—13)



The ornamental design for a multiple tool, as shown.

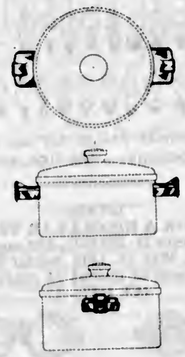
152,823
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marie L. Petit, New York, N. Y.
Application November 30, 1948, Serial No. 149,876
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,824
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marie L. Petit, New York, N. Y.
Application November 30, 1948, Serial No. 149,877
Term of patent 3½ years
(Cl. D45—19)

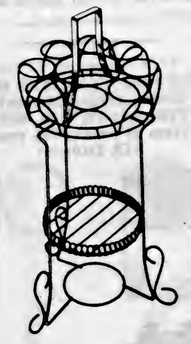
The ornamental design for a brooch or similar article, substantially as shown.

152,825
DESIGN FOR A COOKING VESSEL
Kirk E. Porter, Wooster, Ohio, assignor to The Buckeye Aluminum Company
Application November 7, 1946, Serial No. 134,574
Term of patent 3½ years
(Cl. D44—1)



The ornamental design for a cooking vessel, substantially as shown and described.

152,826
DESIGN FOR A STAND FOR PITCHER AND DRINKING GLASS SET
Steve Raysik, Kansas City, Mo.
Application June 9, 1947, Serial No. 139,536
Term of patent 14 years
(Cl. D35—3)



The ornamental design for a stand for pitcher and drinking glass set, as shown.

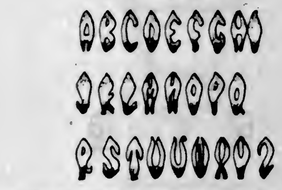
The ornamental design for a bottle, as shown.

The ornamental design for a multiple tool, as shown.

The ornamental design for a brooch or similar article, substantially as shown.

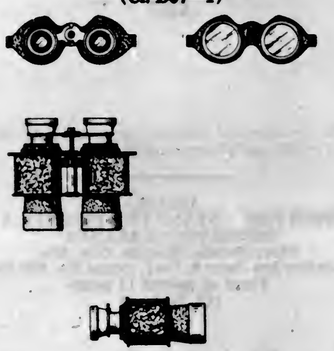
The ornamental design for a stand for pitcher and drinking glass set, as shown.

152,827
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Salvador Reynoso, Chicago, Ill.
Application October 5, 1946, Serial No. 133,794
Term of patent 3½ years
(Cl. D64—12)



The ornamental design for an alphabet for forming monograms or the like, as shown.

152,828
DESIGN FOR A BINOCULAR TELESCOPE
Benjamin D. Rithois, Chicago, Ill.
Application May 23, 1947, Serial No. 139,235
Term of patent 14 years
(Cl. D57—1)



The ornamental design for a binocular telescope, as shown.

152,829
DESIGN FOR A DRAWER HANDLE
Alvin S. Rummelsburg, Hempstead, N. Y.
Application February 19, 1948, Serial No. 144,598
Term of patent 3½ years
(Cl. D10—8)

The ornamental design for a drawer handle, substantially as shown.

152,830
DESIGN FOR A PAJAMA SUIT OR SIMILAR ARTICLE
Herman A. Russian, New Haven, Conn.
Application July 3, 1948, Serial No. 147,381
Term of patent 7 years
(Cl. D3—17)

The ornamental design for a pajama suit or similar article, as shown and described.

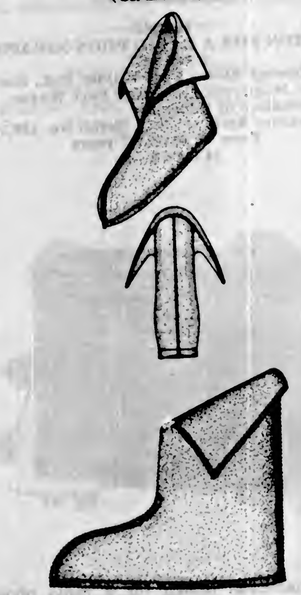
152,831
DESIGN FOR A DISH OR THE LIKE
Joseph G. Saba, Brookline, Mass.
Application June 10, 1947, Serial No. 139,570
Term of patent 3½ years
(Cl. D36—4)

The ornamental design for a dish or the like, as shown and described.

152,832
DESIGN FOR A BABY'S HIGH CHAIR
David I. Scharaga, Mount Vernon, N. Y.
Application June 2, 1947, Serial No. 139,409
Term of patent 14 years
(Cl. D15—8)

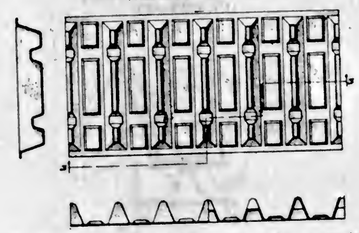
The ornamental design for a baby's high chair, substantially as shown.

152,833
DESIGN FOR A FELT BOOT
Norma I. Scheu, Los Angeles, Calif.
Application November 18, 1946, Serial No. 134,863
Term of patent 14 years
(Cl. D7—7)



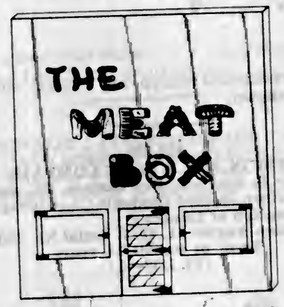
The ornamental design for a felt boot, as shown.

152,834
DESIGN FOR PACKING MATERIAL FOR FRAGILE ARTICLES
Ernest L. Shepard, Fairfield, Maine
Application August 15, 1946, Serial No. 132,557
Term of patent 14 years
(Cl. D58—16)



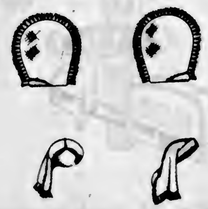
The ornamental design for packing material for fragile articles, as shown.

152,835
DESIGN FOR A STORE FRONT
Ben L. Snyder, Tucson, Ariz.
Application August 15, 1947, Serial No. 140,893
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a store front, substantially as shown.

152,836
DESIGN FOR A HAT
Harold H. Stahl, New York, N. Y.
Application April 30, 1947, Serial No. 138,695
Term of patent 3½ years
(Cl. D3—13)



The ornamental design for a hat, substantially as shown.

152,843

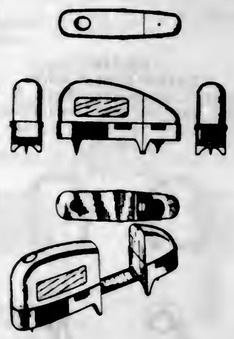
The ornamental design for a drawer handle, substantially as shown.

The ornamental design for a dish or the like, as shown and described.

152,837
DESIGN FOR A CHAIR
James R. Staudt and Rochelle E. Goddard, Fort Worth, Tex.; said Staudt assignor to said Goddard
Application October 28, 1946, Serial No. 134,339
Term of patent 14 years
(Cl. D15—1)

The ornamental design for a chair, substantially as shown.

152,838
DESIGN FOR A BEAM COMPASS
Alexander F. Stephen, Des Plaines, Ill., assignor to American Molded Products Co., Chicago, Ill., a corporation of Illinois
Application August 14, 1947, Serial No. 140,876
Term of patent 14 years
(Cl. D52—1)



The ornamental design for a beam compass, substantially as shown.

152,839
DESIGN FOR A RADIO PHONOGRAPH CABINET
Leland George Stone, Fort Wayne, Ind., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware
Application February 20, 1947, Serial No. 137,052
Term of patent 7 years
(Cl. D56—4)

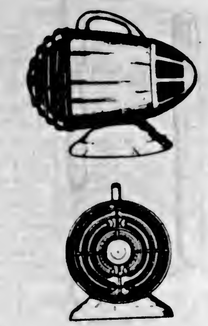
The ornamental design for a radio phonograph cabinet, substantially as shown and described.

152,840
DESIGN FOR A RADIO PHONOGRAPH CABINET
Leland George Stone, Fort Wayne, Ind., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware
Application April 30, 1947, Serial No. 138,701
Term of patent 7 years
(Cl. D56—4)

The ornamental design for a radio phonograph cabinet, substantially as shown and described.

The ornamental design for a felt boot, as shown.

152,841
DESIGN FOR AN ELECTRIC AIR HEATER
Frank W. Thompson, New Haven, and Robert M. Davies, West Haven, Conn., assignors to Kenmildon Inc., a corporation of Delaware
Application November 4, 1947, Serial No. 142,298
Term of patent 14 years
(Cl. D81—10)

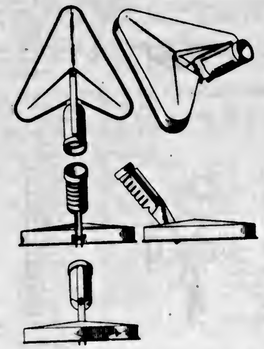


The ornamental design for an electric air heater, substantially as shown and described.

152,842
DESIGN FOR A DOLL
Bertha Wagner, Rye, N. Y.
Application April 19, 1947, Serial No. 138,490
Term of patent 7 years
(Cl. D34—4)

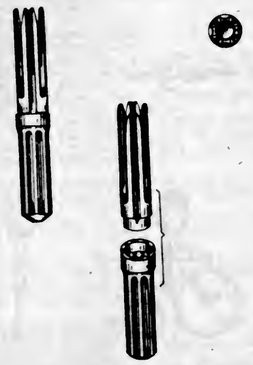
The ornamental design for a doll, as shown.

152,843
DESIGN FOR A COMBINATION MOP HEAD AND HANDLE SOCKET
Franz Wagner, Chicago, Ill., assignor to O-Cedar Corp'n, Chicago, Ill., a corporation of Illinois
Application January 21, 1948, Serial No. 143,956
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a combination mop head and handle socket, as shown.

152,844
DESIGN FOR A COMBINED HAIR CURLER AND BOBBY PIN CONTAINER
Margaret Wajdik, New York, N. Y.
Application October 8, 1947, Serial No. 141,804
Term of patent 7 years
(Cl. D86—10)



The ornamental design for a combined hair curler and bobby pin container, substantially as shown and described.

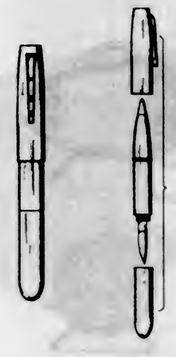
substantially as shown.

described.

152,845
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marvin J. Wakeman, Brooklyn, N. Y.
Application November 30, 1948, Serial No. 149,878
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,847
DESIGN FOR A COMBINATION BALL PEN AND KNIFE
Jacob M. Weiss, New York, N. Y.
Application October 21, 1947, Serial No. 142,052
Term of patent 14 years
(Cl. D74—17)



The ornamental design for a combination ball pen and knife, substantially as shown.

152,846
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marvin J. Wakeman, Brooklyn, N. Y.
Application November 30, 1948, Serial No. 149,879
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,848
DESIGN FOR A COIN DISPENSER
Frederick A. Wetherill and Walter P. Staniszewski, Middletown, Mass.
Application April 9, 1947, Serial No. 138,258
Term of patent 3½ years
(Cl. D52—4)

The ornamental design for a coin dispenser, as shown and described.

Cleaner, Wall paper, rug shampoo, dry cleaner, etc. Clover Farm Stores Corporation. 507,070, Feb. 22; Serial No. 554,093, published Nov. 2, 1948.
Cleaning and scouring compound. Oakite Products, Inc. 256,213, renewed May 7, 1949. O. G. Feb. 22.
Cleaning compound. Shur Gloss Mfg. Co. 506,855, Feb. 22; Serial No. 528,522, published Nov. 9, 1948.
Cleanser. Hobb-Swetnam Company, Inc. 507,076, Feb. 22; Serial No. 560,267, published Oct. 12, 1948.
Cleanser and detergent. Sana-Scent Company. 442,107, Feb. 22; Serial No. 515,517, published Oct. 26, 1948.
Detergent, Inorganic. Diamond Alkali Company. 507,078, Feb. 22; Serial No. 561,891, published Nov. 2, 1948.
Detergent, Inorganic. Diamond Alkali Company. 507,079, Feb. 22; Serial No. 561,902, published Nov. 2, 1948.
Dressing, Liquid belt. Victor Balata & Textile Belting Co. 507,100, Feb. 22; Serial No. 515,970.
Hones and razor strops. Rolls Razor (1927) Limited. 254,416, renewed Mar. 26, 1949. O. G. Feb. 22.
Jewelry, watches and eyeglass cleaner. Connoisseurs Gift Shop, Inc. 506,958, Feb. 22; Serial No. 538,497, published Oct. 5, 1948.
Polish for leather goods. Barton Manufacturing Company. 506,911, Feb. 22; Serial No. 534,591, published Nov. 9, 1948.
Polish, Metal. Sapolin Co. Inc. 254,324, renewed Mar. 19, 1949. O. G. Feb. 22.
Polish, Shoe. The Best Foods, Inc. 507,118, Feb. 22; Serial No. 546,349.
Preparation of acids and other ingredients for the removal of rust and stains. The Midland Chemical Laboratories, Inc. 253,748, renewed Mar. 5, 1940. O. G. Feb. 22.
Shaving cream, Brushless; lather shaving cream. Clover Farm Stores Corporation. 316,286, Aug. 21, 1934. Republished Feb. 22.
Soap. Conti Products Corporation. 507,046, Feb. 22; Serial No. 547,405, published Oct. 26, 1948.
Soap. Great Stuff Products, Inc. 506,871, Feb. 22; Serial No. 531,028, published Nov. 2, 1948.
Soap, Lucien Leland, Inc. 506,923, Feb. 22; Serial No. 536,974, published Nov. 2, 1948.
Soap, Hygienic. National Retailer-Owned Grocers, Inc. 345,127, Apr. 13, 1937. Canceled. O. G. Feb. 22.
Soap impregnated metallic wool pads. Club Aluminum Products Co. 391,270, Oct. 28, 1941. Canceled. O. G. Feb. 22.
Soap, Toilet, laundry soap, granulated soap, etc. The Grocers & Producers Co. 290,469, Jan. 5, 1932. Republished Feb. 22.
Soaps. Salomon Freres Societe a Responsabilite Limitee. 506,946, Feb. 22; Serial No. 537,684, published Oct. 26, 1948.
Spot remover. Brannan and Ross Chemical Products Co. 442,113, Feb. 22; Serial No. 521,318, published Oct. 12, 1948.

CLASS 5

Books, Composition, shelf paper, wax paper, etc. George W. Simmons Corporation. 268,240, Mar. 11, 1930. Republished Feb. 22.
Cards, Index, letter and card indexes, crayons, etc. National Co-Operatives, Inc. 378,447, June 11, 1940. Republished Feb. 22.
Cement, Adhesive. H. J. Heribert. 418,461, Dec. 25, 1945. Canceled. O. G. Feb. 22.
Tape, Gummed sealing. Wortendyke Manufacturing Co. 506,866, Feb. 22; Serial No. 530,612, published Oct. 26, 1948.

CLASS 6

Acetone, methyl-ethyl ketone, methyl ethyl ketone anhydrous alcohol solvent. Kessler Chemical Corporation. 323,513, Apr. 16, 1935. Republished Feb. 22.
Addition agent for electroplating solutions, Liquid. MacDermid Incorporated. 506,822, Feb. 22; Serial No. 515,887, published Nov. 9, 1948.
Antiseptic cream ointment. R. J. Moran Co. 507,049, Feb. 22; Serial No. 547,647, published Oct. 19, 1948.
Antiseptic, insecticides, germicide, etc., Chemical. Monroe Laboratories, Inc. 506,932, Feb. 22; Serial No. 536,707, published Nov. 9, 1948.
Antispasmodic preparation. Parke, Davis & Company. 506,925, Feb. 22; Serial No. 536,124, published Nov. 9, 1948.
Arsenical compound. Abbott Laboratories. 506,834, Feb. 22; Serial No. 522,872, published June 1, 1948.
Bicarbonate of soda, lye, salsoda, etc. The Grocers & Producers Co. 264,868, Dec. 10, 1929. Republished Feb. 22.
Boric acid powder, calomel, spirits of camphor, etc. National Co-Operatives, Inc. 379,235, July 9, 1940. Republished Feb. 22.
Cake makeup. Richard Hudnut. 507,052, Feb. 22; Serial No. 548,818, published Oct. 19, 1948.
Calcium preparation. R. I. Guy. 507,022, Feb. 22; Serial No. 543,705, published Nov. 9, 1948.
Capsules. Walker Vitamin Products, Inc. 507,064, Feb. 22; Serial No. 552,023, published Nov. 9, 1948.
Chemical compounds. The Denver Chemical Manufacturing Company. 405,820, Feb. 22, 1944. Republished Feb. 22.

Chemical compounds. Haas-Miller Corporation. 432,621,
Ointment, Skin. R. Lewis. 507,068, Feb. 22; Serial No.

CLASS 10

CLASS 16

Paint, Paste. Armstrong Paint & Varnish Works. 506,985,

Chemical compounds. Haas-Miller Corporation. 432,621, Sept. 9, 1947. Republished Feb. 22.
Chemical ingredient, Active. Hercules Powder Company. 436,667, Feb. 17, 1948. Canceled. O. G. Feb. 22.
Chemical preparations, Various. Watson-Park Company. 277,935, Dec. 2, 1930. Canceled. O. G. Feb. 22.
Chemicals, Water treatment. J. H. Heal. 507,096, Feb. 22 ; Serial No. 509,281.
Chemotherapeutic agent. Parke, Davis & Company. 507,047, Feb. 22 ; Serial No. 547,479, published Oct. 19, 1948.
Chemotherapeutic agent. Parke, Davis & Company. 507,063, Feb. 22 ; Serial No. 552,000, published Nov. 9, 1948.
Cholagogues and choleretics. Ames Company, Inc. 435,692, Jan. 6, 1948. Republished Feb. 22.
Cold cream, Theatrical. Sanborn Hermanos, S. A. 507,061, Feb. 22 ; Serial No. 551,476, published Oct. 26, 1948.
Cologne, bay rum, deodorant, etc. John Hudson Moore, Inc. 442,102, Feb. 22 ; Serial No. 512,079, published Oct. 5, 1948.
Compound to be used as a cough syrup and an herb and vitamin compound for use as a tonic. J. E. Reapondek. 503,145, Oct. 19, 1948. Corrected. O. G. Feb. 22.
Cosmetic kits and dispensing devices. C. E. McNutt. 506,883, Feb. 22 ; Serial No. 532,473, published Aug. 17, 1948.
Cosmetics. Curran Laboratories, Inc. 251,800, renewed Jan. 15, 1949. O. G. Feb. 22.
Cough syrup. Bacon Products Company. 507,119, Feb. 22 ; Serial No. 548,908.
Cream. Sun tan liquid. Jantsen Knitting Mills. 397,576, Sept. 3, 1942. Republished Feb. 22.
Deodorant, Personal. W. L. Sloan. 507,112, Feb. 22 ; Serial No. 541,890.
Dolomite, Selectively calcined. G. & W. H. Corson. 383,369, Dec. 3, 1940. Republished Feb. 22.
Ear drops. Doho Chemical Corporation. 309,463, Jan. 16, 1934. Republished Feb. 22.
Ear drops, Doho Chemical Corporation. 350,399, Sept. 28, 1937. Republished Feb. 22.
Emulsion, Wax. The Wilbur White Chemical Company, Inc. 302,907, May 22, 1933. Republished Feb. 22.
Ethyl acetate, butyl acetate, amyl acetate, etc. Publicker. 442,118, Feb. 22 ; Serial No. 523,267, published Nov. 9, 1948.
Face cream, face lotion, face powder, etc. Harriet Hubbard Ayer, Inc. 507,004, Feb. 22 ; Serial No. 542,268, published Oct. 26, 1948.
Face powder, rouge and lipstick. Richard Hudnut. 442,118, Feb. 22 ; Serial No. 523,267, published Nov. 9, 1948.
Fluoride product. L. P. Strean Laboratories Inc. 442,110, Feb. 22 ; Serial No. 518,261, published June 29, 1948.
Food, Medicinal. Allen & Hanburys, Limited. 253,419, renewed Feb. 26, 1949. O. G. Feb. 22.
Glycerine, sweet oil, spirits of nitre, etc. Clover Farm Stores Corporation. 316,543, Aug. 28, 1934. Republished Feb. 22.
Hair rinse. Ar-Jay Laboratories, Incorporated. 399,562, Jan. 19, 1943. Republished Feb. 22.
Insecticide. C. E. Jones. 362,350, Nov. 15, 1938. Republished Feb. 22.
Insecticide. Michigan Chemical Corporation. 442,099, Feb. 22 ; Serial No. 508,540, published Nov. 9, 1948.
Insecticides. S. L. Landrum. 500,104, Apr. 13, 1948. Canceled. O. G. Feb. 22.
Insecticides and fungicides. The Sherwin-Williams Company. 507,037, Feb. 22 ; Serial No. 545,294, published Oct. 5, 1948.
Insecticides and fungicides. The Sherwin-Williams Company. 507,038, Feb. 22 ; Serial No. 545,297, published Oct. 5, 1948.
Iodine preparation. R. I. Guy. 507,023, Feb. 22 ; Serial No. 543,706, published Nov. 9, 1948.
Laxative. The Harrower Laboratory, Inc. 507,058, Feb. 22 ; Serial No. 551,101, published Nov. 9, 1948.
Laxatives. R. I. Guy. 507,024, Feb. 22 ; Serial No. 543,710, published Nov. 9, 1948.
Medicinal powder. W. R. Baker. 506,838, Feb. 22 ; Serial No. 523,453, published Nov. 9, 1948.
Medicinal preparation. The Ayer Company. 255,661, renewed Apr. 30, 1949. O. G. Feb. 22.
Medicinal preparation. The Denver Chemical Manufacturing Company. 44,419, July 4, 1905. Republished Feb. 22.
Medicinal preparation. The Denver Chemical Manufacturing Company. 404,462, Nov. 23, 1943. Republished Feb. 22.
Medicinal preparation. Desbergers Limited. 506,916, Feb. 22 ; Serial No. 535,004, published Nov. 9, 1948.
Medicinal preparation, Eli Lily and Company. 506,952, Feb. 22 ; Serial No. 538,016, published Oct. 12, 1948.
Medicinal preparations. The E. L. Patch Company. 507,062, Feb. 22 ; Serial No. 551,815, published Nov. 9, 1948.
Mixture of ascorbic acid and citric acid. Chas. Pfizer & Co., Inc. 434,073, Nov. 4, 1947. Republished Feb. 22.
Mouth wash. Rigo Manufacturing Company. 431,975, Aug. 12, 1947. Republished Feb. 22.
Ointment. W. R. Baker. 506,837, Feb. 22 ; Serial No. 523,452, published Nov. 9. 1948.
Ointment. Chicago Pharmacal Company. 506,967, Feb. 22 ; Serial No. 539,491, published Aug. 24, 1948.
Ointment. R. Lewis. 507,069, Feb. 22 ; Serial No. 553,875, published Nov. 9, 1948.
Ointment, Skin. R. Lewis. 507,068, Feb. 22 ; Serial No. 553,874, published Nov. 9, 1948.
Osmotherapeutic treatment of ear diseases. Doho Chemical Corporation. 357,151, May 24, 1938. Republished Feb. 22.
Pastilles, Throat. Rougier Freres Incorporated. 245,409, renewed Aug. 14, 1948. O. G. Feb. 22.
Perfume, toilet water and perfumed liquid bath preparation. Caron Corporation. 507,045, Feb. 22 ; Serial No. 547,320, published Nov. 9, 1948.
Perfume, toilet water, eau de cologne, etc. Chanel, Inc. 422,335, July 16, 1946. Republished Feb. 22.
Perfume, toilet water, lipstick, etc. Houbigant, Inc. 506,919, Feb. 22 ; Serial No. 535,844, published Nov. 9, 1948.
Perfumes, toilet water, bath oil, etc. Haviland Laboratories, Inc. 506,910, Feb. 22 ; Serial No. 534,438, published Nov. 9, 1948.
Petroleum jelly. Newbro Manufacturing Company. 507,117, Feb. 22 ; Serial No. 542,871.
Powders, washes, soaps, etc. Dresdener Chemisches Laboratorium Lingner. 30,942, re-renewed Dec. 7, 1947. O. G. Feb. 22.
Preparation for the treatment of coccidiosis. Ebersole-Gaetz-Rhodes Co. 428,653, Apr. 1, 1947. Republished Feb. 22.
Preparation for use in treatment of skin irritation of the feet due to a special condition of ringworm known as "athlete's foot." Ormont Drug & Chemical Co., Inc. 442,092, Feb. 22 ; Serial No. 499,962, published Mar. 11, 1947.
Preparation in dried, liquid or solid form. C. J. Martin & Sons. 410,605, Dec. 5, 1944. Republished Feb. 22.
Preparation in tablet or powder form. Wm. P. Poythress & Co. Inc. 397,405, Sept. 8, 1942. Republished Feb. 22.
Product having antihistaminic properties. Societe Des Usines Chimiques Rhone-Poulenc. 507,057, Feb. 22 ; Serial No. 550,837, published Nov. 9, 1948.
Reagent, Dry. The Denver Chemical Manufacturing Company. 357,121, May 24, 1938. Republished Feb. 22.
Salt. Sharp & Dohme, Incorporated. 250,447, renewed Dec. 11, 1948. O. G. Feb. 22.
Shampoo, Cocoanut oil, pressing oil, massage cream, etc. Valmor Products Co. 506,873, Feb. 22 ; Serial No. 531,554, published Nov. 9, 1948.
Silicate of soda. Philadelphia Quartz Company. 507,035, Feb. 22 ; Serial No. 544,656, published Nov. 9, 1948.
Soap, Zinc. Witco Chemical Company. 442,106, Feb. 22 ; Serial No. 515,008, published Oct. 26, 1948.
Sodium antimonate, thermalin, and tin oxide. Metal & Thermit Corporation. 250,743, renewed Dec. 18, 1948. O. G. Feb. 22.
Sodium penicillin, Crystalline. Bristol Laboratories Inc. 506,900, Feb. 22 ; Serial No. 533,843, published Nov. 9, 1948.
Solution and a scale salt. Mulford Colloid Laboratories. 349,186, Aug. 24, 1937. Republished Feb. 22.
Solution to be used as a coating, finish, or lacquer for textiles, etc. H. J. Heribert. 419,478, Feb. 19, 1946. Canceled. O. G. Feb. 22.
Spray, Fly. National Co-Operatives, Inc. 357,735, June 14, 1938. Republished Feb. 22.
Sulfonamide preparation. Smith, Kline & French Laboratories. 507,059, Feb. 22 ; Serial No. 551,329, published Nov. 9, 1948.
Sulphur. Stauffer Chemical Company. 507,071, Feb. 22 ; Serial No. 554,436, published Nov. 9, 1948.
Tablet used in the treatment of peptic ulcers and other disorders of the gastro-intestinal tract. Irwin, Neisler & Company. 507,029, Feb. 22 ; Serial No. 544,088, published Oct. 26, 1948.
Toilet preparations. J. H. Bereman. 251,731, renewed Jan. 15, 1949. O. G. Feb. 22.
Tonic for hair and scalp. De Loney & Company, Inc. 506,817, Feb. 22 ; Serial No. 513,300, published Oct. 26, 1948.
Tonic tablet. R. H. Sommers. 262,738, Oct. 22, 1929. Canceled. O. G. Feb. 22.
Tooth powder and mouth lotion. H. R. Brown. 507,055, Feb. 22 ; Serial No. 549,614, published Nov. 9, 1948.
Veterinary preparation. H. W. Naylor. 435,985, Jan. 20, 1948. Republished Feb. 22.
Vitamin B-complex extract derived from yeast. Cornell Pharmacal Co. 442,100, Feb. 22 ; Serial No. 510,013, published Aug. 17, 1948.
Vitamin B preparation. R. I. Guy. 507,025, Feb. 22 ; Serial No. 543,711, published Nov. 9, 1948.
Wave lotion, Permanent, hair-end cream, hair lacquer, etc. L. Napolitan. 506,963, Feb. 22 ; Serial No. 539,071, published Nov. 9, 1948.

CLASS 8

Cases, Cigarette. Illinois Watch Case Co. 507,007, Feb. 22 ; Serial No. 542,765, published Oct. 26, 1948.
Cases, Cigarette. Pioneer Suspender Company. 506,828, Feb. 22 ; Serial No. 518,970, published Oct. 26, 1948.
Cases, Cigarette. Pioneer Suspender Company. 506,841, Feb. 22 ; Serial No. 526,546, published Aug. 10, 1948.
Electrically operated apparatus and parts thereof. National Co-Operatives, Inc. 386,642, Apr. 22, 1941. Republished Feb. 22.

CLASS 10

Coal, coke, kindling wood, etc. National Co-Operatives, Inc. 377,942, May 21, 1940. Republished Feb. 22.

CLASS 11

Carbon paper, Carbon and manifolding. Autographic Register Company. 506,880, Feb. 22 ; Serial No. 532,105, published Nov. 9, 1948.
Ink, Writing. L. E. Waterman Company. 72,285–6, renewed Jan. 12, 1949. O. G. Feb. 22.

CLASS 12

Awnings, Ventilated metal. National Blow Pipe & Mfg. Co., Ltd. 507,107, Feb. 22 ; Serial No. 530,421.
Colors for masonry materials. Geo. S. Mepham Corporation. 507,044, Feb. 22 ; Serial No. 546,717, published Oct. 19, 1948.
Concrete blocks and concrete cinder blocks. H. J. Condo. 507,054, Feb. 22 ; Serial No. 549,122, published Nov. 2, 1948.
Concrete products. Bergen Building Block Inc. 506,940, Feb. 22 ; Serial No. 537,406, published Nov. 9, 1948.
Fiber board, Low-density structural wood. Wood Conversion Company. 506,960, Feb. 22 ; Serial No. 538,695, published Sept. 28, 1948.
Firebrick. Mexico Refractories Company. 507,003, Feb. 22 ; Serial No. 542,035, published Oct. 5, 1948.
Firebrick. Mexico Refractories Company. 507,033, Feb. 22 ; Serial No. 544,589, published Sept. 28, 1948.
Grating and open flooring, Metallic. Blaw-Knox Company. 507,017, Feb. 22 ; Serial No. 543,372, published Nov. 9, 1948.
Insulating material, Thermal. D. S. Bennion. 442,093, Feb. 22 ; Serial No. 500,205, published Dec. 30, 1947.
Plywood. United States Plywood Corporation. 507,053, Feb. 22 ; Serial No. 549,097, published Nov. 2, 1948.
Refractory material, Castable. Pilbrico Jointless Firebrick Company. 507,036, Feb. 22 ; Serial No. 545,160, published Sept. 28, 1948.
Road guards and parts thereof, Highway. Truscon Steel Company. 506,976, Feb. 22 ; Serial No. 539,996, published Oct. 19, 1948.
Sash, Metal window, metal window frames, metal window casements, etc. Corry-Jamestown Manufacturing Corporation. 442,111, Feb. 22 ; Serial No. 518,753, published Oct. 19, 1948.
Screen and window, All-aluminum combination. American Millwork Company. 507,051, Feb. 22 ; Serial No. 548,226, published Nov. 2, 1948.
Tarpaulins, Waterproof canvas. C. R. Daniels, Inc. 255,548, renewed Apr. 23, 1949. O. G. Feb. 22.

CLASS 13

Bars, Galvanized. E. P. D'Azzo. 442,095, Feb. 22 ; Serial No. 503,978, published Nov. 2, 1948.
Cards, Index, letter and card indexes, crayons, etc. National Co-Operatives, Inc. 378,447, June 11, 1940. Republished Feb. 22.
Chambered floats. The Ayling & Reichert Co. 507,080, Feb. 22 ; Serial No. 564,497, published Oct. 26, 1948.
Cookers and pressure canners, Pressure. National Pressure Cooker Company. 506,813, Feb. 22 ; Serial No. 509,786, published Sept. 28, 1948.
Cooking, kitchen, and household ware, Porcelain enamel coated base metal. The Canton Stamping & Enameling Company. 506,897–8, Feb. 22 ; Serial Nos. 533,532–3, published Oct. 26, 1948.
Fasteners, Flexible or hinged belt. Flexible Steel Lacing Co. 183,808, May 6, 1924. Corrected. O. G. Feb. 22.
Fasteners, Flexible or hinged belt. Flexible Steel Lacing Co. 412,091, Feb. 20, 1945. Corrected. O. G. Feb. 22.
Fasteners, Flexible or hinged belt. Flexible Steel Lacing Co. 414,307, June 5, 1945. Corrected. O. G. Feb. 22.
Fire fighting equipment. Western Fire Protection, Inc. 442,103, Feb. 22 ; Serial No. 513,084, published Oct. 26, 1948.
Hardware. H. L. Judd Company. 442,104, Feb. 22 ; Serial No. 513,825, published Oct. 26, 1948.
Hardware, Building. National Co-Operatives, Inc. 380,280, Aug. 20, 1940. Republished Feb. 22.
Pipe, pipe fittings, fluid shut-off valves, etc. Glascote Products, Inc. 506,826, Feb. 22 ; Serial No. 517,991, published Nov. 2, 1948.
Screw machine products. U. S. Automatic Corporation. 442,090, Feb. 22 ; Serial No. 486,012, published Nov. 2, 1948.
Tubing, Steel and copper. R. J. Fuite. 442,105, Feb. 22 ; Serial No. 514,337, published Oct. 26, 1948.
Washers, Spring. Philadelphia Steel and Wire Corporation. 407,799–800, June 27, 1944. Republished Feb. 22.

CLASS 14

Metals, Ferrous, and ferrous metal castings and forgings. The American Rolling Mill Company. 503,390, Oct. 26, 1948. Corrected. O. G. Feb. 22.

CLASS 15

Oils, Gasoline and motor-fuel. Humble Oil & Refining Company. 250,838, renewed Dec. 18, 1948. O. G. Feb. 22.

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Dearborn Chemical Company, assignee: *See*—
Gunderson, Lewis O.

Gunderson, Lewis O., Park Ridge, assignor to Dearborn Chemical Company, Chicago, Ill. Prevention of foaming in steam generation. Re. 23,085, Feb. 22.

Holl, James W. F., Los Angeles, Calif. Variable delivery rotary pump. Re. 23,086, Feb. 22.

LIST OF PLANT PATENTEES

Armstrong Nurseries, Inc., assignee: *See*—
Swim, Herbert C.

Grullemans, John J., assignee: *See*—
Sparre, Gustave C.

Sparre, Gustave C., Clarkson, Ontario, Canada, assignor to J. J. Grullemans, Mentor, Ohio. Chrysanthemum plant. 825, Feb. 22.

Sparre, Gustave C., Clarkson, Ontario, Canada, assignor to J. J. Grullemans, Mentor, Ohio. Chrysanthemum plant. 826, Feb. 22.

Sparre, Gustave C., Clarkson, Ontario, Canada, assignor to J. J. Grullemans, Mentor, Ohio. Chrysanthemum plant. 827, Feb. 22.

Swim, Herbert C., assignor to Armstrong Nurseries, Inc., Ontario, Calif. Rose plant. 828, Feb. 22.

Swim, Herbert C., assignor to Armstrong Nurseries, Inc., Ontario, Calif. Rose plant. 829, Feb. 22.

LIST OF DESIGN PATENTEES

American Molded Products Co., assignee: *See*—
Stephen, Alexander F.

Atkin, Kenneth C., assignor to Clarke Sanding Machine Company, Muskegon, Mich. Sanding machine. 152,763, Feb. 22.

Bassett, Charlie J., Fairfax, Ala. Combined grater and receptacle. 152,764, Feb. 22.

Bell Aircraft Corporation, assignee: *See*—
Noble, Roy A., and Youngs.

Binder, Joseph, New York, N. Y., assignor to Pepperell Manufacturing Company, Boston, Mass. Carton. 152,765, Feb. 22.

Birnbaum, Charles, Brooklyn, N. Y. Tie clasp or similar article. 152,766, Feb. 22.

Blackstone Corporation, assignee: *See*—
Briggs, Allan L.

Braham, William E., Los Angeles, Calif. Toy water gun. 152,767, Feb. 22.

Briggs, Allan L., assignor to Blackstone Corporation, Jamestown, N. Y. Portable ironing machine. 152,768, Feb. 22.

Buckeye Aluminum Company, The, assignee: *See*—
Porter, Kirk E.

Caparone, Michael J., Monterey Park, assignor to Grayson Heat Control, Ltd., Lynwood, Calif. Thermostatic control gas valve unit or similar article. 152,769, Feb. 22.

Clarke Sanding Machine Company, assignee: *See*—
Atkin, Kenneth C.

Cohen, Sidney, assignor to Morris W. Haft & Bros., Inc., New York, N. Y. Suit. 152,770, Feb. 22.

Conti Products Corporation, assignee: *See*—
Nunes, Leo G.

Coro, Inc., assignee: *See*—
Katz, Adolph.

Cutler, Horace F., Malden, Mass. Telephone dialing implement. 152,771, Feb. 22.

Davies, Robert M.: *See*—
Thompson, Frank W., and Davies.

Dawson, Stephen V., Evanston, assignor to Orange-Crush Company, Chicago, Ill. Beverage dispenser. 152,772, Feb. 22.

Dennison Manufacturing Company, assignee: *See*—
McGovern, Henry P.

Donaldson, Thomas C., Hollywood, Calif. Coffee urn. 152,773, Feb. 22.

Duester, Hans J., assignor to himself and J. Major, Chicago, Ill. Extensible band for a watch bracelet or similar article. 152,774, Feb. 22.

Duester, Hans J., assignor to himself and J. Major, Chicago, Ill. Extensible band for a watch bracelet or similar article. 152,775, Feb. 22.

Dwinell, Charles L., Kansas City, Mo. Advertising display sign. 152,776, Feb. 22.

Dwinell, Charles L., Kansas City, Mo. Display fixture. 152,777, Feb. 22.

Electra Voice Corporation, assignee: *See*—
Overshiner, Ellsworth B.

Empire Ironer, Inc., assignee: *See*—
Getgey, John J.

Fairbanks, Morse & Co., assignee: *See*—
Maguire, Leonard.

Fox, Wilfred R., assignor to Redmond Company, Inc., Owosso, Mich. Air blower. 152,778, Feb. 22.

Franklin Company, The, assignee: *See*—
Klein, William H.

Gesten, Arthur, Newark, N. J. Tie clasp. 152,779, Feb. 22.

Getgey, John J., assignor, by mesne assignments, to Empire Ironer, Inc., Cincinnati, Ohio. Portable ironer. 152,780, Feb. 22.

Gier, George E., Covington, Ky. Tire expanding tool. 152,781, Feb. 22.

Glenmore Distilleries Company, assignee: *See*—
Kelley, Henry E., Jr.

Goddard, Rochelle E.: *See*—
Staudt, James R., and Goddard.

Grayson Heat Control, Ltd., assignee: *See*—
Caparone, Michael J.

Guild, Lurelle V. A., Noroton, Conn. Push-button switch. 152,782, Feb. 22.

Haft, Morris W., & Bros., Inc., assignee: *See*—
Cohen, Sidney.

Helsey, A. H., & Company, assignee: *See*—
King, Horace.

Hess, Lester L., New York, N. Y. Brooch or similar article. 152,783, Feb. 22.

Higgins, Joseph C., Chicago, Ill. Combination table and foldable benches. 152,784, Feb. 22.

Hilliard, Thomas K., Oakland, Calif. Toy vehicle. 152,785, Feb. 22.

Huffman, Russell I., Dover, Ohio, assignor to Knapp-Monarch Company, St. Louis, Mo. Electric steam iron. 152,786, Feb. 22.

Jennings, O. D., & Company, assignee: *See*—
Mihalek, Emery.

Kangas, Arthur J., Detroit, Mich. Deodorant container. 152,787, Feb. 22.

Kaser, Albert, Glendale, Calif. Note-pad container. 152,788, Feb. 22.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,789, Feb. 22.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,790, Feb. 22.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,791, Feb. 22.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,792, Feb. 22.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,793, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,794, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,795, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,796, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,797, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,798, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,799, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 152,800, Feb. 22.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Finding for jewelry. 152,801, Feb. 22.
Kelley, Henry E., Jr., Kirkwood, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky. Book end. 152,802, Feb. 22.
Kenmildon Inc., assignee: *See*—
Thompson, Frank W., and Davies.
Keramaris, Nickolas, Detroit, Mich. Necktie. 152,803, Feb. 22.
King, Horace, assignor to A. H. Heisey & Company, Newark, Ohio. Glass candle holder or similar article. 152,804, Feb. 22.
King, Horace, assignor to A. H. Heisey & Company, Newark, Ohio. Glass candle holder or similar article. 152,805, Feb. 22.
Klein, William H., Great Neck, assignor to The Franklin Company, Woodside, N. Y. Floodlight holder. 152,806, Feb. 22.
Knapp-Monarch Company, assignee: *See*—
Huffman, Russell I.
Latousek, Bernard L., Los Angeles, Calif. Fog lens. 152,807, Feb. 22.
Lerman, Ben, assignor to Mastercrafters Clock & Radio Co., Chicago, Ill. Clock. 152,808, Feb. 22.
Lorentzen Hardware Mf'g. Corp., assignee: *See*—
Nelson, Harry.
Lynn, H. E., & Company, Inc., assignee: *See*—
MacCauley, Wilbur J.
MacCauley, Wilbur J., assignor to H. E. Lynn & Company, Inc., Santa Monica, Calif. Pressure control regulator. 152,809, Feb. 22.
Magnavox Company, The, assignee: *See*—
Stone, Leland G.
Maguire, Leonard, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill. Weighing scale. 152,810, Feb. 22.
Maguire, Leonard, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill. Weighing scale. 152,811, Feb. 22.
Major, John, assignee: *See*—
Duester, Hans J.
Mapes, Daniel, West Caldwell, N. J. Portable fire extinguisher or similar article. 152,812, Feb. 22.
Maselli, William V., Woodbridge, Conn. Multiple fireplace for outdoor use. 152,813, Feb. 22.

Hautau, Charles F.
Applied Arts Corporation, assignee: *See*—
Hendricks, Cornelius.
Archer-Daniels-Midland Company, assignee: *See*—
Konen, James C., and Schroeder.
Arditi, Maurice, Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y. Electronic discharge device for electronic multiplication. 2,462,059, Feb. 22.
Armstrong, C. M., Inc., assignee: *See*—
Block, Richard J.
Arundale, Erving, Westfield, N. J., assignor to Standard Oil Development Company. Treatment of synthetic rubber latex. 2,462,591, Feb. 22.
Austin, William E.: *See*—
Van Dinter, George L., and Austin.
Automatic Electric Laboratories, Inc., assignee: *See*—
Herrick, Roswell H.
Badeau, Carroll A.: *See*—
Thomas, George C., Jr., and Badeau.
Bakelite Corporation, assignee: *See*—
Myers, Clayton S.
Shechter, Leon.
Baker, Benjamin P., Turtle Creek, and W. M. Leeds, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,462,708, Feb. 22.
Ball, Edgar D., Horsley Woodhouse, near Derby, assignor to Taylor-Ball Developments Limited, London, England. Toggle actuated tool and release therefor. 2,462,709, Feb. 22.
Ballinger, Lewis J. H., Randwick, near Stroud, England. Abrasive wheel guard. 2,462,710, Feb. 22.
Baltimore Paper Box Company, The, assignee: *See*—
Riley, Melvin A., and McClelland.
Bard, Francis N., Highland Park, Ill. Flexible joint. 2,462,592, Feb. 22.
Barnes, James F., assignee: *See*—
Rodriquez, Alfred.
Barnes, John V., La Canada, Calif. Water softener. 2,462,154, Feb. 22.
Barnes, Margaret M., assignee: *See*—
Rodriquez, Alfred.
Barnett, Willard W., Clovis, N. Mex. Front wheel bicycle knee action. 2,462,711, Feb. 22.
Barney, Arthur L., West Lafayette, assignor to Purdue Research Foundation, La Fayette, Ind. Preparation of di-menthone. 2,462,712, Feb. 22.
Barrick, Paul L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Monomeric fluorine compounds containing a four-carbon atom ring. 2,462,345, Feb. 22.
Barrick, Paul L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Aromatic polyfluoro four-carbon atom ring compounds. 2,462,346, Feb. 22.
Barrick, Paul L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reaction products of polyfluoroethylenes and terminally unsaturated compounds. 2,462,347, Feb. 22.
Bartelt, Paul, assignor to International Standard Electric Corporation, New York, N. Y. Transmission mechanism. 2,462,060, Feb. 22.
Bartlett, Benson G. W., assignor to one-half to Northern Patent Developments, Limited, Darlington, England. Annular floating toothed gearing. 2,462,455, Feb. 22.
Bassford, Henry H., Jr., and W. S. Harmon, Elizabeth, and J. F. Mahoney, Westfield, assignors to Merck & Co., Inc., Rahway, N. J. Preparing ascorbic acids. 2,462,251, Feb. 22.
Batchelder, Howard R., Chicago, Ill., assignor to The United Gas Improvement Company. Pitch resin. 2,462,593, Feb. 22.
Batchler, Roy, Washington, D. C. Pipe joint. 2,462,348, Feb. 22.
Batten, Percy H., assignee, trustee, et al.: *See*—
Boestad, Gustav K. W., and Eriksson.
Batten, Percy H., as trustee: *See*—
Lysholm, Alf.
Battilani, Stefano, New York, N. Y. Vacuum type coffee-making utensil. 2,462,349, Feb. 22.
Bauer, Joseph, and A. Schittelbauer, Detroit, Mich. Height gauge. 2,462,350, Feb. 22.
Beal, James F. assignor to Renfrew Electric & Refrigerator Company Limited Renfrew, Ontario, Canada. Multi-position switch. 2,462,594, Feb. 22.
Beatty, William A., London W. C. 2, England, assignor to International Standard Electric Corporation, New York, N. Y. High-frequency electrical communication system utilising damped oscillations. 2,462,061, Feb. 22.

Bechle, Charles W.: *See*—
Boestad, Gustav K. W., and E. O. Eriksson, Liding…

Buckley, Clyde D., Stamford, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for …
Chatterjea, Prafulla K., and L. W. Houghton, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. …

Bechle, Charles W.: *See*—
Olson, John W., and Bechle.

Bechtol, Lavon D.: *See*—
McBee, Earl T., and Bechtol.

Bedford, Alda V., Princeton, N. J., assignor to Radio Corporation of America. Antihunt servomotor control system. 2,462,456, Feb. 22.

Beech-Nut Packing Company, assignee: *See*—
Binsack, Joseph W.

Beeman, Donald R., Wharton, N. J., assignor to the United States of America as represented by the Secretary of War. Fuse. 2,462,062, Feb. 22.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Christensen, Howard, and Kleimack.
Olsen, Karl M.
Wooten, Leland A.

Bendix Aviation Corporation, assignee: *See*—
Herwig, Robert S.
Wheeler, Harold A.
Yates, Lester R.

Benedict, Fremont W., Upper Darby, Pa. Screening. 2,462,595, Feb. 22.

Beney, James K.: *See*—
Chatterjea, Prafulla K., Ambrose, and Beney.

Benjamin, Milton L., Shaker Heights, and F. E. Winnen, Cleveland, Ohio, said Winnen assignor to said Benjamin. Chuck. 2,462,155, Feb. 22.

Bent, Arthur J., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Packing. 2,462,596, Feb. 22.

Bergman, Charles P., Brooklyn, N. Y., assignor to Rockwell Manufacturing Company. Guide means for rotary oscillating pistons of expansible chamber meters. 2,462,063, Feb. 22.

Berkson, Erwin L., Chicago, Ill. Tamperproof hinge or the like. 2,462,300, Feb. 22.

Berman, Bertha, New York, N. Y. Bed sheet construction. 2,462,156, Feb. 22.

Berndtson, John O., Short Beach, assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn. Multiple-clutch mechanism. 2,462,457, Feb. 22.

Berry, Charles R., deceased, Vicksburg, Miss.; R. M. Berry, administratrix. Doffing mechanism for cotton harvesters. 2,462,800, Feb. 22.

Beymer, Marshall, assignor of one-half to H. L. Sweitz, Chicago, Ill. Spot welding apparatus. 2,462,458, Feb. 22.

Bice, Richard A.: *See*—
Boyd, John, and Bice.

Bigelow, Charles A., Houston, Tex. Air resistant brake flap. 2,462,459, Feb. 22.

Billig, Julius: *See*—
Norman, William Z., and Billig.

Bilnor Corp., assignee: *See*—
Norman, William Z., and Billig.

Bilofsky, Myers A., Loch Arbour, N. J. Film holder. 2,462,713, Feb. 22.

Binks Manufacturing Company, assignee: *See*—
Gustafsson, Eric, and Striegel.

Binsack, Joseph W., New Drop, assignor to Beech-Nut Packing Company, Canajoharie, N. Y. Carton closing machine. 2,462,460, Feb. 22.

Bird, John L.: *See*—
Halpert, Percy, Frische, Bird, and Esval.

Bird, Miles F., Cushing, Wis. Vacuum jar and bottle combined. 2,462,461, Feb. 22.

Blackburn, John L.: *See*—
Goldsborough, Shirley L., and Blackburn.

Blackburn, Wayne E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Eliminating porosity in crystalline selenium films. 2,462,157, Feb. 22.

Blau, Marietta, New York, and J. R. Carlin, Brooklyn, assignors to Canadian Radium & Uranium Corporation, New York, N. Y. Area measuring device and method. 2,462,351, Feb. 22.

Block, Richard J., Scarsdale, N. Y., assignor to C. M. Armstrong, Inc. Amino acid separation. 2,462,597, Feb. 22.

Blockman, Albert F.: *See*—
De Waard, Russell D., Stryker, and Blockman.

Blodget, Richard, Chicago, Ill. Rotatable disk, perpetual calendar with interlaced spiral formations. 2,462,598, Feb. 22.

Bludworth, Joseph E., M. O. Robeson, and H. A. Truby, Jr., Corpus Christi, Tex., assignors to Celanese Corporation of America. Electrolytic production of allyl alcohol. 2,462,301, Feb. 22.

Bluman, John E.: *See*—
Guerdan, Dikran A., and Bluman.

Blumensaadt, Evend G.: *See*—
Neely, William H., and Blumensaadt.

Blumlein, Alan D., deceased, Ealing, London, by D. Blumlein, executrix, Leecroft, Penzance, Cornwall, and W. H. Connell, Hillingdon, and D. G. Holloway, Maidenhead, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England. Self-balancing bridge arrangement. 2,462,599, Feb. 22.

Blumlein, Doreen, executrix: *See*—
Blumlein, Alan D.

Boardman, Harry C., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Pressure vessel for storage of liquids at abnormally high or low temperatures. 2,462,064, Feb. 22.

Boestad, Gustav K. W., and E. O. Eriksson, Lidingo, Sweden, assignors, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Turbine. 2,462,600, Feb. 22.

Boggs, Helen J.: *See*—
Boggs, Herbert D. and H. J.

Boggs, Herbert D. and H. J., Omaha, Nebr. Convertible air and land conveyance. 2,462,462, Feb. 22.

Bohl, Hugo E., Westfield, N. J. Circular-line fluorescent lighting fixture. 2,462,714, Feb. 22.

Bohrer, George J., Troy, N. Y., assignor to General Electric Company. Tetrachlorophthalic diesters. 2,462,601, Feb. 22.

Bolsey, Jacques, New York, N. Y. Shutter control for cinematographic cameras. 2,462,302, Feb. 22.

Boot, Robert H. F., assignor to Under Water Welders & Repairers Limited, London, England. Electric arc cutting electrode. 2,462,463, Feb. 22.

Booth, James C., Jackson Heights, N. Y. Warning magnetic unit. 2,462,715, Feb. 22.

Booth, Sheldon M., Chicago, Ill. Toolholder. 2,462,716, Feb. 22.

Boots, Edmund R., Short Hills, N. J., assignor to The Nylok Corporation, New York, N. Y. Threaded locking device. 2,462,603, Feb. 22.

Booty, Raymond G., Elmwood Park, Ill., assignor to Weyerhaeuser Timber Company, Tacoma, Wash. Production and use of synthetic resin. 2,462,252, Feb. 22.

Booty, Raymond G., Elmwood Park, Ill., assignor to Weyerhaeuser Timber Company, Tacoma, Wash. Production and use of synthetic resin. 2,462,253, Feb. 22.

Boston Woven Hose and Rubber Company, assignee: *See*—
Knowland, Thomas M.

Botteron, Donald G., Syracuse, N. Y., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Preparation of vinyl ethers. 2,462,602, Feb. 22.

Boucher, Percival L., Troon Ayrshire, assignor to Glenfield & Kennedy Limited, Kilmarnock, Ayrshire, Scotland. Water filter. 2,462,604, Feb. 22.

Bouget, Yves A., West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Material serving apparatus. 2,462,303, Feb. 22.

Bowen, William J., and W. R. White, Berkeley, Calif. Shoe polish compact. 2,462,065, Feb. 22.

Bowser, S. F., & Company, Ltd., assignee: *See*—
Passman, Charles.

Boyd, John, Pittsburgh, and R. A. Bice, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Producing articles of manufacture. 2,462,158, Feb. 22.

Boyer, Raymond F.: *See*—
Matheson, Lorne A., and Boyer.

Boyer, Raymond F., L. A. Matheson, and R. C. Reinhardt, assignors to The Dow Chemical Company, Midland, Mich. Heat stable compositions comprising polymeric vinylidene chloride and phenothioxine or certain derivatives thereof. 2,462,352, Feb. 22.

Bratton, Francis H.: *See*—
Calfee, John D., and Bratton.

Bray, Frederick H., and F. E. Newton, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Circuits for generating electric impulses. 2,462,066, Feb. 22.

Brennan, Joseph B., assignee: *See*—
Moythan, John J.

Brickman, Alan E., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Contraction joint assembly. 2,462,353, Feb. 22.

Bridwell, Chalon E., Detroit, Mich. Valve cage. 2,462,605, Feb. 22.

Brier, Ernest J., Los Angeles, and W. G. McCue, Downey, Calif. Ironing cord retractor. 2,462,464, Feb. 22.

British Industrial Solvents, Limited, assignee: *See*—
Pemberton, Edgar S.

Broderick & Bascom Rope Company, assignee: *See*—
Larkin, David.

Brodeur, Jules, New York, N. Y., assignor to Coty, Inc., Wilmington, Del. Cosmetic blend predetermining device. 2,462,606, Feb. 22.

Brown & Bigelow, assignee: *See*—
Trollen, Martin E.

Brown, Milton F., Jr., Thomson, Ga. Button fastener. 2,462,717, Feb. 22.

Brown, Robert L., Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose derivative combined with n-alkoxymethyl polyamide. 2,462,159, Feb. 22.

Browne, Donald W., Chicago, Ill. Heating element. 2,462,607, Feb. 22.

Brubaker, Merlin M., Delaware County, and R. A. Jacobson, Landenburg, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Organic compound polymerisation process. 2,462,354, Feb. 22.

Brun, Marcel, Saint-Etienne, France. Cycle bell. 2,462,718, Feb. 22.

Bryan, Thomas J., Brooklyn, N. Y. Combined cigarette or tobacco package and ash tray. 2,462,160, Feb. 22.

Buckendale, Lawrence R., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Resilient lubricant seal. 2,462,067, Feb. 22.

Buckley, Clyde D., Needham, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Snap fastener attaching tool. 2,462,801, Feb. 22.

Buckley, Clyde D., Stamford, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for fastener attaching means. 2,462,802, Feb. 22.

Buechele, Andrew C., Minneapolis, Minn., assignor to General Mills, Inc. Plastic composition. 2,462,053, Feb. 22.

Burdick, Emory F., assignor to F. L. Jacobs Co., Detroit, Mich. Sun visor. 2,462,304, Feb. 22.

Burgess, Everett H.: *See*—
Lehane, Timothy J., and Burgess.

Burroughs, Samuel G., Pittsburgh, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Coumarone-indene resin stabilized with an alkyl polyhydroxy spiro indane. 2,462,608, Feb. 22.

Burroughs, Samuel G., Pittsburgh, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Indene resin stabilized with an alkyl polyhydroxy spiro indane. 2,462,609, Feb. 22.

Burum, Fisher C., assignor of one-third to G. B. Lindler, Houston, Tex. Parking meter resetting mechanism. 2,462,610, Feb. 22.

Butts, Richard R., Miamisburg, Ohio. Vibratory polisher. 2,462,068, Feb. 22.

Butwin Sportswear Co., assignee: *See*—
Cassens, Bruno F.

Bye, Clarence M., Osseo, Wis. Shoe or boot display device. 2,462,611, Feb. 22.

Byer, Henry E., Bernardsville, N. J. Condenser. 2,462,355, Feb. 22.

Byrd, Noel M., Charleston, Ill. Suspending device. 2,462,719, Feb. 22.

Caldwell, Glenn A.: *See*—
Erbe, John R., and Caldwell.

Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Amides of acetoacetic acid and their preparation. 2,462,358, Feb. 22.

Caldwell, John R., and H. J. Hagemeyer, Jr., Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Preparation of β-lactones. 2,462,357, Feb. 22.

Calfee, John D., Manhasset, and F. H. Bratton, Floral Park, N. Y., assignors to Allied Chemical & Dye Corporation. Hydrofluorination of unsaturated organic compounds. 2,462,359, Feb. 22.

Call, Howard L., Ogden, Utah. Matrix band. 2,462,356, Feb. 22.

Callis, Howard F., Norfolk, Va. Hose supporter. 2,462,161, Feb. 22.

Cameron Machine Company, assignee: *See*—
Scheuermann, Joseph S., and Carter.

Campbell, Kenneth S., and J. E. Sands, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture. Fireproofing compositions. 2,462,803, Feb. 22.

Campbell, Samuel J., Green Bay, Wis. Multiple lane wrapping machine and method. 2,462,254, Feb. 22.

Canadian Radium & Uranium Corporation, assignee: *See*—
Blau, Marietta, and Carlin.

Canady, Don, assignor to Dayton Acme Company, Cincinnati, Ohio. Voltage multiplier. 2,462,804, Feb. 22.

Carey, Reece M., assignee: *See*—
Galvin, Charles E.

Carlin, Jack R.: *See*—
Blau, Marietta, and Carlin.

Carlson, Clarence W., assignee: *See*—
Holmes, John E.

Carnell, Paul H., Bartlesville, Okla., assignor to Phillips Petroleum Company. Preparing lubricating oils. 2,462,360, Feb. 22.

Carter, Thomas N.: *See*—
Scheuermann, Joseph S., and Carter.

Casella, Secondo L.: *See*—
Himoff, Morris G., and Casella.

Casella, Secondo L., New York, assignor to Morey Machinery Co. Inc., Astoria, Long Island, N. Y. Chuck for lathes and the like machine tools. 2,462,465, Feb. 22.

Cassens, Bruno F., assignor to Butwin Sportswear Co., St. Paul, Minn. Jacket construction. 2,462,361, Feb. 22.

Castedello, William: *See*—
Schwartz, Morris, and Castedello.

Castellanos, Gonzalo M., Placetas, assignor to Meneses y Compania, Placetas, Las Villas, Cuba. Crude oil purifier. 2,462,466, Feb. 22.

Catlin, John P., Fairfield, assignor to Remington Arms Company, Inc., Bridgeport, Conn. Explosive device. 2,462,305, Feb. 22.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., Robeson, and Truby.
Elvin, William J., and Stahl.

Charman, Walter M., Shaker Heights, and B. F. Anthony, Cleveland Heights, assignors to The Ferro Engineering Company, Cleveland, Ohio. Insulating cover. 2,462,255, Feb. 22.

Charman, Walter M., Shaker Heights, and B. F. Anthony, Cleveland Heights; said Anthony assignor to The Ferro Engineering Company, Cleveland, Ohio. Insulating cover. 2,462,256, Feb. 22.

Charrier, Marc F., Monticello, N. Y. Gas producer. 2,462,720, Feb. 22.

Chatterjea, Prafulla K., and L. W. Houghton, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Radio communication system. 2,462,069, Feb. 22.

Chatterjea, Prafulla K., and S. J. Powers, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Hermetically sealed electric insulator. 2,462,070, Feb. 22.

Chatterjea, Prafulla K., D. M. Ambrose and J. K. Beney, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Generation of electric pulses. 2,462,071, Feb. 22.

Chenicek, Joseph A.: *See*—
Thompson, Ralph B., and Chenicek.

Chicago Bridge & Iron Company, assignee: *See*—
Boardman, Harry C.
Horton, George T.

Chicago Metallic Manufacturing Company, assignee: *See*—
Debs, Jerome H.

Christensen, Esther M., Denver, Colo. Compartmented culinary utensil. 2,462,362, Feb. 22.

Christensen, Howard, Springfield, and J. J. Kleimack, Westfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Metallic oxide resistor. 2,462,162, Feb. 22.

Ciba Limited, assignee: *See*—
Roestl, Hans.

Clamp, Charles C., San Antonio, Tex. Pyrophoric lighter. 2,462,467, Feb. 22.

Clark, Avery A.: *See*—
Roach, David J., Clark, and Rienks.

Clark, Kendall, and K. O. Sisson, Oakwood, assignors to General Motors Corporation, Dayton, Ohio. Spectacle sighting device. 2,462,468, Feb. 22.

Clark, Maurice G.: *See*—
Mills, Robert V., Clark, and Ruff.

Clinton Machine Company, assignee: *See*—
Thomas, Donald.

Cochran, Robert T.: *See*—
Knox, William H., Jr., Cochran, Grudup, and Miller.

Cockerille, Frank O., Albemarle County, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of esters. 2,462,163, Feb. 22.

Cohen, Harold, Elizabeth, N. J. Locking device. 2,462,164, Feb. 22.

Cohen, Harold, Elizabeth, N. J. Clamp. 2,462,721, Feb. 22.

Cole, M. T., Co., assignee: *See*—
Meyer, Walter, and Cole.

Cole, Myron T., assignee: *See*—
Meyer, Walter.

Colgate-Palmolive-Peet Company, assignee: *See*—
Malkemus, John D.
Percy, Joseph H.

Collins Radio Company, assignee: *See*—
Hubbard, Merle R.

Colt's Manufacturing Company, assignee: *See*—
Kennedy, Horace J.

Condon, Naomi V., Detroit, Mich. Garment for infants. 2,462,165, Feb. 22.

Conmar Products Corporation, assignee: *See*—
Mikulas, William, and Jones.

Connell, William H.: *See*—
Blumlein, Alan D., Connell, and Holloway.

Conrow, Clayton L., Arroyo Grande, Calif. Adjustable binder hitch. 2,462,469, Feb. 22.

Consolidated Edison Company of New York, Inc., assignee: *See*—
Donovan, Lewis B.

Consolidated Vultee Aircraft Corp., assignee: *See*—
Dusevoir, Julius.

Cook Electric Company, assignee: *See*—
Hasselhorn, Walter C.

Cook, John W., York, S. C. Spring. 2,462,363, Feb. 22.

Cook, Leonard W., Stratford, Conn., assignor to General Electric Company. Control switch for discharge lamps. 2,462,306, Feb. 22.

Cooper, Ernest E., Lafayette, R. I. Pivoted side-jaw wrench having manually-controlled slidable-wedge lock. 2,462,364, Feb. 22.

Cooper's, Incorporated, assignee: *See*—
Kneibler, Arthur R.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Coty, Inc., assignee: *See*—
Brodeur, Jules.

Court, Frank T., assignor to Deere & Company, Moline, Ill. Controllable hydraulic power lift. 2,462,722, Feb. 22.

Craig, John R., deceased, by The Union Trust Company of Pittsburgh, administrator, Pittsburgh, Pa. Liquid treating apparatus. 2,462,612, Feb. 22.

Crane Co., assignee: *See*—
De Craene, Edmond P.

Crawford, Frank, Lihue, Hawaii. Fishing reel. 2,462,365, Feb. 22.

Creassi, Harry O.: *See*—
Jacobson, Eugene W., Creassi, and Aikins.

Creed and Company Limited, assignee: *See*—
Salmon, Reginald D.
Thomas, Frank R.

Cruich, John R., Chicago, Ill. Toy repeating rubber band gun. 2,462,723, Feb. 22.

Crompton & Knowles Loom Works, assignee: *See*—

Detrick, Stanley R., New Castle County, W. H. Lockwood, Wilmington; and N. Whitman, New Castle County, assignors to E. I. du Pont de Nemours & Company,

Eaton Manufacturing Company, assignee: *See*—
Russell, Robert G.

Eby, Lawrence T., Roselle, and L. A. Mikeska, Westfield,

Ferro Engineering Company, The, assignee: *See*—
Charman, Walter M., and Anthony.
Garms, Levi J.

Fields, Charles V., Pittsburgh, assignor to Westinghouse

Cruich, John R., Chicago, Ill. Toy repeating rubber band gun. 2,462,723, Feb. 22.
Crompton & Knowles Loom Works, assignee: *See*—
Manoog, John C., and Wakefield.
Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Telegraphy receiver with automatic frequency control. 2,462,470, Feb. 22.

Court, Frank T.
Deere, John, Van Brunt Company, assignee: *See*—
Hyland, William A.
Deere Manufacturing Co., assignee: *See*—
Worthington, Wayne H., and Jirsa.
De Forest, Lee, Los Angeles, Calif. Frequency modulating device. 2,462,367, Feb. 22.
Delaney, Virginia M., Norco, Calif. Circular knitting needle. 2,462,473, Feb. 22.
Delano, James K., Rye, N. Y. Coating apparatus for wires, filaments, and the like. 2,462,474, Feb. 22.
Delmonte, John, Glendale, assignor of seventy-two per cent to R. Hemphill, Los Angeles, Calif. Furfuryl alcohol-resorcinol resin composition. 2,462,054, Feb. 22.
Desch, Joseph R., E. V. Gulden, and R. E. Mumma, assignors to The National Cash Register Company, Dayton, Ohio. Communication system. 2,462,613, Feb. 22.
Detrick, Stanley R., New Castle County, W. H. Lockwood, Wilmington, and N. Whitman, New Castle County, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polysulfonyl chlorides. 2,462,730, Feb. 22.
De Vilbiss Company, The, assignee: *See*—
Peeps, Donald J.
De Waard, Russell D., Riverside, C. R. Stryker, Cos Cob, and A. F. Blockman, Springdale, Conn., assignors to American Cyanamid Company, New York, N. Y. Stiffness and bending strength tester for thin sheet materials. 2,462,826, Feb. 22.
Dewhirst, Paul A., assignee: *See*—
Hamer, Leland S.
De Witt, Chauncey O., Teaneck, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Automatic drainage apparatus. 2,462,614, Feb. 22.
Di Filippo, Abramo, Silver Spring, Md. Sterilizer for barbers' implements. 2,462,475, Feb. 22.
Di-Met Proprietary Limited, assignee: *See*—
Nightingall, Victor C. J.
Dinzl, Richard W., Westfield, assignor to The Watson-Stillman Co., Roselle, N. J. Injection molding machine. 2,462,308, Feb. 22.
Donohue, John F., Philadelphia, Pa. T square gauge. 2,462,075, Feb. 22.
Donovan, Lewis B., White Plains, assignor to Consolidated Edison Company of New York, Inc., New York, N. Y. Apparatus for painting gas holders. 2,462,368, Feb. 22.
Dooley, Harry H.: *See*—
Wallhausen, Clarence W., and Dooley.
Dow Chemical Company, The, assignee: *See*—
Boyer, Raymond F., Matheson, and Reinhardt.
Matheson, Lorne A., and Boyer.
Dowick, Benjamin, Jersey City, N. J. Device for mounting selective multiple pulleys upon an electric motor drive shaft. 2,462,476, Feb. 22.
Downing, Frederick B.: *See*—
Pedersen, Charles J., and Downing.
Drake, Frederick H., assignor to Aircraft Radio Corporation, Boonton, N. J. Oscillator tube mounting. 2,462,370, Feb. 22.
Drake, Frederick H., Boonton, and P. B. King, Jr., Mountain Lakes, assignor to Aircraft Radio Corporation, Boonton, N. J. Bead thermistor. 2,462,369, Feb. 22.
Dryden, James B., Carlsbad, N. Mex. Tank filling control. 2,462,076, Feb. 22.
Dubé, Noël A., Salmon Falls, N. H. Table baseball. 2,462,170, Feb. 22.
Dubpernell, George, Watertown, Conn., assignor to United Chromium, Incorporated, New York, N. Y. Chromium plating and treating steel airplane propeller blades. 2,462,615, Feb. 22.
Duggan, George A., Long Beach, Calif. Diversion blind fitting. 2,462,731, Feb. 22.
Duggar, Llewellyn G., Montgomery, Ala. Navigational system. 2,462,077, Feb. 22.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Barrick, Paul L.
Brown, Robert L.
Brubaker, Merlin M., and Jacobson.
Cockerille, Frank O.
Detrick, Stanley R., Lockwood, and Whitman.
Gresham, William F.
Gribbins, Myers F.
Hager, Glenn F.
Hallowell, Alban T.
Harmon, Jesse.
Hauser, Paul M.
Hetherington, Harry C.
Hoover, Fred W.
Jennings, Andrew B.
Joyce, Robert M., Jr.
Langkammerer, Carl M.
McQueen, David M.
Murray, Otis W.
Pedersen, Charles J., and Downing.
Plambeck, Louis, Jr.
Roedel, Milton J.
Sargent, Donald E.
Schneider, Allan K.
Searle, Norman E.
Tremaine, Breckinridge K.
Walker, Kenneth E.
Weinmayr, Viktor.
Whitman, Gerald M.
Woodward, David W.
Dusevoir, Julius, Dearborn, Mich., assignor to Consolidated Vultee Aircraft Corp., San Diego, Calif. Slidable vane pump. 2,462,732, Feb. 22.
Dyke, Milton, Los Angeles, Calif. Boxcar guard. 2,462,309, Feb. 22.
Dym, Joseph B.: *See*—
Kehoe, Joseph W., and Dym.
Earp, Charles W., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Oscillation generator. 2,462,078, Feb. 22.
Easley, Gilbert J., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,462,733, Feb. 22.
Eastman Kodak Company, assignee: *See*—
Caldwell, John R.
Caldwell, John R., and Hagemeyer.

Eaton Manufacturing Company, assignee: *See*—
Russell, Robert G.
Eby, Lawrence T., Roselle, and L. A. Mikeska, Westfield, N. J., assignors to Standard Oil Development Company. Lubricating oil containing an anti-oxidant. 2,462,616, Feb. 22.
Eckels, H. S., & Co., Incorporated, assignee: *See*—
Eckels, John H.
Eckels, John H., Merchantville, N. J., assignor to H. S. Eckels & Co., Incorporated, Philadelphia, Pa. Embalming apparatus. 2,462,617, Feb. 22.
Edwards, Charles R., deceased, Houston, Tex.; F. R. Edwards, executrix. Safety joint. 2,462,477, Feb. 22.
Edwards, Charles R., deceased, Houston, Tex.; F. R. Edwards, executrix. Reversing tool. 2,462,478, Feb. 22.
Edwards, Francis R., executrix: *See*—
Edwards, Charles R.
Ellerman, George E., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Water dispersible coating vehicle. 2,462,618, Feb. 22.
Eisenmith, William F., Penns Grove, N. J. Freight bracing device. 2,462,619, Feb. 22.
Elder, Esther R., Pasadena, assignor of forty per cent to W. R. Harriman, Hondo, ten per cent to E. A. Harrington, Pasadena, and ten per cent to M. E. Peachman, San Francisco, Calif. Apparatus for drying hair. 2,462,079, Feb. 22.
Electric & Musical Industries Limited, assignee: *See*—
Blumlein, Alan D., Connell, and Holloway.
Elleby, Eugene H., Atlanta, Ga. Rat or mouse trap. 2,462,479, Feb. 22.
Elvin, William J., Frostburg, Md., and E. R. Stahl, Meyersdale, Pa., assignors to Celanese Corporation of America. Winding device. 2,462,310, Feb. 22.
England, James M., Lebanon, Mo., assignor of one-third to D. E. Owen and E. A. Gill, Litchfield, Ill. Winding machine. 2,462,620, Feb. 22.
England, James M., Lebanon, Mo., assignor of one-third to D. E. Owen and E. A. Gill, Litchfield, Ill. Armature shaft winding cap. 2,462,621, Feb. 22.
Engle, Homer A., Los Angeles, Calif. Control apparatus for periodically energizing gaseous discharge devices. 2,462,371, Feb. 22.
Engstrom, Thor: *See*—
Guffey, Wayne W., Mihelic, Piper, and Engstrom.
Eppler, Arthur H., Milwaukee, Wis. Polishing method and apparatus. 2,462,480, Feb. 22.
Erb, George C., Forest Hills West, assignor to American Can Company, New York, N. Y. Apparatus for shaping containers. 2,462,080, Feb. 22.
Erbe, John R., and G. A. Caldwell, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Generator fed motor control system. 2,462,171, Feb. 22.
Erdmann, Richard C., Minneapolis, Minn. Collar and tie holder. 2,462,311, Feb. 22.
Erickson, Charles A., Dearborn, assignor, by mesne assignments, to F. L. Jacobs Co., Detroit, Mich. Pump. 2,462,372, Feb. 22.
Erikson, Erik O.: *See*—
Boestad, Gustav K. W., and Erikson.
Esarey, Raymond W., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor construction. 2,462,172, Feb. 22.
Estey, Maynard E., Canandaigua, assignor, by mesne assignments, to Estey Products Corporation, Geneva, N. Y. Sliding vane pump or motor. 2,462,481, Feb. 22.
Estey Products Corporation, assignee: *See*—
Estey, Maynard E.
Esval, Orland E.: *See*—
Halpert, Percy, Frische, Bird, and Esval.
Esval, Orland E., Huntington, N. Y., assignor to The Sperry Corporation. Servomotor system. 2,462,081, Feb. 22.
Evans, Clarence T., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electromagnet with plunger. 2,462,482, Feb. 22.
Excel Automatic Products, Inc., assignee: *See*—
Mills, John E.
Farrow, Frederick R., Jr., Audubon, N. J., assignor to Philco Corporation, Philadelphia, Pa. Mounting means for vacuum tubes. 2,462,622, Feb. 22.
Faure, Bernard, Neuilly-sur-Seine, France. Joining and registering device for molding boxes. 2,462,373, Feb. 22.
Faus, James, assignee: *See*—
Nye, William B.
Federal Telecommunication Laboratories, Inc., assignee: *See*—
Hollabaugh, Max G.
Feldmann, Henry J., Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock mechanism. 2,462,827, Feb. 22.
Ferguson, Leslie L., East St. Louis, Ill., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Separation of an emulsion of petroleum oil and aqueous solution containing added alkali metal salts of cresols. 2,462,810, Feb. 22.
Ferris, Walter, assignor to The Oilgear Company, Milwaukee, Wis. Fluid transmitting device. 2,462,734, Feb. 22.
Ferro Engineering Company, The, assignee: *See*—
Charman, Walter M., and Anthony.
Garms, Levi J.
Fields, Charles V., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-frequency capacitor. 2,462,173, Feb. 22.
Finlay, Walter L., Fairfield, and G. E. Hutchinson, assignors to Remington Arms Company, Inc., Bridgeport, Conn. Shot shell. 2,462,312, Feb. 22.
Firth, Francis G., New York, assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y. Stress analysis by X-ray diffraction. 2,462,374 Feb. 22.
Fisher, Bernard E., Detroit, Mich. Doorstop. 2,462,174, Feb. 22.
Flaherty, Bartholomew R., Shelton, assignor to Industrial Metal Products Laboratory, Ansonia, Conn. Article holder. 2,462,375, Feb. 22.
Flamm, Alexander L., Fairfield, Conn. Stapling device. 2,462,623, Feb. 22.
Fleisher, Harry, Watertown, Conn., and G. H. Tillett, assignors to Roto-Matic Screen Printer, Ltd., New York, N. Y. Squeegee supporting and guiding structure. 2,462,376, Feb. 22.
Fletcher, George H., Sheffield, England, assignor, by mesne assignments, to General Electric Company. Voltage regulating system. 2,462,624, Feb. 22.
Flinn, Van Q., Waynesburg, Ky. Modernistic spring metal folding chair. 2,462,877, Feb. 22.
Florman, Irving, New York, N. Y. Shaving machine. 2,462,625, Feb. 22.
Flory, Leslie E.: *See*—
Morton, George A., and Flory.
Flory, Paul J.: *See*—
Rebner, John, Jr., and Flory.
Folkers, Karl, Plainfield, assignor to Merck & Co., Inc., Rahway, N. J. Aryl azo sulfonic acid salts of streptothricin and streptomycin. 2,462,175, Feb. 22.
Fontaine, Julian F., Detroit, Mich. Tie clasp. 2,462,483, Feb. 22.
Forbes, Allan D.: *See*—
Hodnette, John K., and Forbes.
Forster, Joseph E., Oakland, Calif. Portable fire escape. 2,462,626, Feb. 22.
Foster, John, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Thermionic valve. 2,462,082, Feb. 22.
Foster, Warren D., Eustis, Fla. Film handling apparatus and magazine for use therewith. 2,462,083, Feb. 22.
Foulkes, Christopher H., assignor to Standard Telephones and Cables Limited, London, England. Mounting of filaments in vacuum tubes. 2,462,084, Feb. 22.
Fox, Filbert G., Doylestown, Pa. Nonskid tire chain. 2,462,378, Feb. 22.
Fox, Gordon, assignor to Freyn Engineering Company, Chicago, Ill. Skip hoist control. 2,462,484, Feb. 22.
Fram Corporation, assignee: *See*—
Gunn, Earl G.
Freeman, Ellis, Sarasota, Fla. Means for testing color vision. 2,462,485, Feb. 22.
Freeman, Walter K., Wakefield, assignor to Simplex Wire & Cable Co., Cambridge, Mass. Lead extrusion. 2,462,313, Feb. 22.
Frei, John, Jr., Chicago, Ill. Crucible holder and crucible. 2,462,259, Feb. 22.
Fremlin, John H., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Ultra high frequency oscillator. 2,462,085, Feb. 22.
Fremlin, John H., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electron discharge device of the velocity modulation type. 2,462,087, Feb. 22.
Fremlin, John H., and S. G. Tomlin, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electron discharge device. 2,462,086, Feb. 22.
Freyn Engineering Company, assignee: *See*—
Fox, Gordon.
Friedman, Herbert, Arlington, Va. Measuring thickness of curved sections and apparatus therefor. 2,462,088, Feb. 22.
Frisbie, Marshall H., Hamden, assignor to The A. C. Gilbert Company, New Haven, Conn. Cabinet culinary appliance. 2,462,089, Feb. 22.
Frische, Carl A.: *See*—
Halpert, Percy, Frische, Bird, and Esval.
Fryar, William H., Litchfield, Ill. Hone for reconditioning cutters in pencil sharpeners. 2,462,176, Feb. 22.
Fuller Manufacturing Company, assignee: *See*—
Trail, Herbert H.
Fundaburk, Robert H.: *See*—
Gittings, Lewis D., and Fundaburk.
Fuqua, Clarence V., Vandalia, Ill. Tree-felling circular saw. 2,462,314, Feb. 22.
Gagne, Antoine F., Jr., Pompton Lakes, N. J., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Ammunition making machinery. 2,462,315, Feb. 22.
Gall, John F., Narberth, assignor to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Purification of crude sulfur hexafluoride. 2,462,379, Feb. 22.

Galvin, Charles E., assignor, by decree of distribution and assignment, to R. M. Carey, Springfield, Ohio. Wool cutting machine and method. 2,462,090, Feb. 22.
Gant, Lee W., McKinney, Tex. Cotton picker. 2,462,177.
Green, Douglas H., London, England. Construction of structural members. 2,462,385, Feb. 22.
Green, Martin, assignor of one-half to C. Handler, Newark, N. J. Cloth lifter for cloth cutting machines. 2,462,317,

Hamer, Leland S., Long Beach, assignor of one-fourth to P. A. Dewhirst, Los Angeles, Calif. Seal for pipe-line fittings. 2,462,403, Feb. 22.
Hamer, Leland S., Long Beach, assignor of one-fourth to ... Angeles, Calif. Pipe fitting.
Hemphill, Ralph, assignee: *See*—
Delmonte, John.
Hendricks, Cornelius, assignor to Applied Arts Corporation, Grand Rapids, Mich. Ash receiver. 2,462,397, Feb. 22.

Galvin, Charles E., assignor, by decree of distribution and assignment, to E. M. Carey, Springfield, Ohio. Wool cutting machine and method. 2,462,080, Feb. 22.
Gant, Lee W., McKinney, Tex. Cotton picker. 2,462,177, Feb. 22.
Gans, Henry, West Englewood, N. J., assignor to The Personal Products Corporation. Tampon machine and making tampons. 2,462,178, Feb. 22.
Garand, John C., Springfield, Mass., assignor to the United States of America as represented by the Secretary of War. Collapsible stock for firearms. 2,462,091, Feb. 22.
Garms, Levi J., Lakewood, assignor to The Ferro Engineering Company, Cleveland, Ohio. Hot top blocking. 2,462,260, Feb. 22.
Garrett, Patrick H., Mount Hope, W. Va. Baptismal apparatus. 2,462,627, Feb. 22.
Gase, Franklin I., Cleveland, Ohio. Machine for marking the surface of a column of plastic materials. 2,462,628, Feb. 22.
Gautreau, Arthur G., Quincy, assignor to Andrews & Goodrich, Inc., Dorchester, Mass. Method and apparatus for drying web material. 2,462,350, Feb. 22.
Gazda, Antoine, Providence, R. I. Spring handle bar for motor cycles and the like. 2,462,351, Feb. 22.
Gebrandt, Gustav R., Evanston, Ill. Opposed piston engine. 2,462,092, Feb. 22.
Geigy, J. R., A.-G., assignee: *See*—
Keller, Ernst, and Zweidler.
General Electric Company, assignee: *See*—
Bohrer, George J.
Cook, Leonard W.
Fletcher, George H.
Haber, Charles P.
Hodge, William F.
Lange, Carl W.
Leighton, Leroy G.
Lord, Harold W.
McNairy, Jacob W.
Mills, Robert V., Clark, and Ruff.
Olcott, Eugene L.
Reinhardt, Bryson R.
Ruff, Harold R.
Schaefer, Vincent J.
Wilbur, Donald A.
General Mills, Inc., assignee: *See*—
Buechele, Andrew C.
Moe, Owen A.
Norris, Frank A.
General Motors Corporation, assignee: *See*—
Clark, Kendall, and Sisson.
Murphy, John M.
Schneider, Siebert.
Geophysical Service Incorporated, assignee: *See*—
Renner, Darwin S.
Gidley, Philip T., Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company. Sunlight resistant composition. 2,462,629, Feb. 22.
Gilbert, A. C., Company, The, assignee: *See*—
Frisbie, Marshall H.
Gill, Edmond A., assignee: *See*—
England, James M.
Gille, Willis H., St. Paul, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Phase-sensitive self-balancing frequency meter. 2,462,630, Feb. 22.
Gittings, Lewis D., and R. H. Fundaburk, Anniston, Ala., assignors to Monsanto Chemical Company, St. Louis, Mo. Coating compositions. 2,462,631, Feb. 22.
Givoni, Gideon, Melbourne, Victoria, Australia. Appliance for stretching gloves or the like. 2,462,632, Feb. 22.
Gleason, Paul G., Van Nuys, Calif. Turnbuckle. 2,462,382, Feb. 22.
Glenfield & Kennedy Limited, assignee: *See*—
Boucher, Percival L.
Godsey, Frank W., Jr.: *See*—
Kilgore, Lee A., Godsey, Rose, and Powers.
Goldberg, Jacob M., Denver, Colo. Moving picture film reel. 2,462,261, Feb. 22.
Goldsborough, Shirley L., Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Protective relaying system for polyphase circuits. 2,462,179, Feb. 22.
Goldsborough, Shirley L., Basking Ridge, and J. L. Blackburn, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Selective-pole tripping system. 2,462,180, Feb. 22.
Goldwater, Bernard L., Brooklyn, N. Y. Photo identification for checks. 2,462,735, Feb. 22.
Goodloe, Alfred M., Montclair, assignor to Metal Textile Corporation, West Orange, N. J. Compressed wire mesh unit. 2,462,316, Feb. 22.
Goodrich, B. F., Company, The, assignee: *See*—
Hasselquist, Victor H.
Goodwin, Lester C., Hornell, N. Y. Trailer chimney. 2,462,383, Feb. 22.
Gorin, Manuel H., and W. Swerdloff, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Recovery of products of hydrocarbon conversion reactions. 2,462,384, Feb. 22.
Great Western Sugar Company, The, assignee: *See*—
Roach, David J., Clark, and Rienks.
Green, Douglas H., London, England. Construction of structural members. 2,462,385, Feb. 22.
Green, Martin, assignor of one-half to C. Handler, Newark, N. J. Cloth lifter for cloth cutting machines. 2,462,317, Feb. 22.
Greenlee Bros. & Co., assignee: *See*—
Mansfield, Judson H.
Gregg, Albert E.: *See*—
Nicodemus, Carroll N., and Gregg.
Gregory, Clinton J., Hot Springs, S. Dak. Device for treating timber. 2,462,486, Feb. 22.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of N,N'-dimethylethanolamine. 2,462,736, Feb. 22.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymeric compounds from 1,3-dioxalane. 2,462,737, Feb. 22.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of organic oxygen-containing compounds. 2,462,738, Feb. 22.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Recovery of hydrogen fluoride-boron trifluoride catalysts. 2,462,739, Feb. 22.
Gribbins, Myers F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Animal feed. 2,462,633, Feb. 22.
Griffin Chemical Company, assignee: *See*—
Ruedrich, Paul M.
Griffin, Harry M., Webster Groves, Mo., assignor to Curtiss-Wright Corporation. Tool assembly. 2,462,386, Feb. 22.
Griffith, George, Ottawa, Ontario, Canada. Crankcase ventilator for motor vehicles. 2,462,634, Feb. 22.
Griffith, Ivor, Elkins Park, Pa., and A. P. Huchberger, New York, N. Y., assignors to The Frank H. Lee Company, Danbury, Conn. Apparatus for forming felt. 2,462,487, Feb. 22.
Grillo, Emily P., assignee: *See*—
Pontiere, Stanley M.
Grimes, Edgar S., Ridgewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Modulator. 2,462,093, Feb. 22.
Grosselfinger, Walter H., Manhasset, assignor to Western Electric Company, Incorporated, New York, N. Y. Radio transmitting system. 2,462,181, Feb. 22.
Grove, Donald J.: *See*—
Hipple, John A., Jr., and Grove.
Grover, James B., New York, N. Y. Electrical safety interlocking system. 2,462,094, Feb. 22.
Guerdan, Dikran A., Wilkinsburg, and J. E. Bluman, Sharon, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor having coaxial counter-rotating shafts. 2,462,182, Feb. 22.
Guffey, Wayne W., and J. P. Mihelic, Gary, H. V. Piper, Crown Point, and T. Engstrom, Gary, Ind. Cover lifter. 2,462,387, Feb. 22.
Guilden, Ernest V.: *See*—
Desch, Joseph R., Guilden, and Mumma.
Gulf Research & Development Company, assignee: *See*—
Jacobson, Eugene W., Cressl, and Atkins.
Gunn, Earl G., Providence, R. I., assignor to Fram Corporation. Control plate for filter cartridges. 2,462,488, Feb. 22.
Gustafson, Eric, and H. L. Striegel, assignors to Binks Manufacturing Company, Chicago, Ill. Dual spray gun. 2,462,262, Feb. 22.
Haber, Charles P., Schenectady, N. Y., assignor to General Electric Company. Cyclic polymeric organoaminosilanes. 2,462,635, Feb. 22.
Hafner, Ludwig G. P.: *See*—
Quirk, Justin P., and Hafner.
Hagemeyer, Hugh J., Jr.: *See*—
Caldwell, John R., and Hagemeyer.
Hagen, Asbjorn, Kleisiming, Manitoba, Canada. Gasoline filter. 2,462,740, Feb. 22.
Hager, Glenn F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of 1,4-dicyano-2-butene. 2,462,388, Feb. 22.
Halfco, Inc., assignee: *See*—
Spangenberg, Alfred L.
Hall, Elisha W., Scituate, Mass. Rotary abrading tool. 2,462,741, Feb. 22.
Hallett, Elton C., assignor to Hallett Manufacturing Company, Inglewood, Calif. Multiple shielded assembly unit. 2,462,489, Feb. 22.
Hallett, Elton C., assignor to Hallett Manufacturing Company, Inglewood, Calif. Shielded housing for ignition coils and filters. 2,462,490, Feb. 22.
Hallett, Elton C., assignor to Hallett Manufacturing Company, Inglewood, Calif. Ignition coil and filter shield assembly. 2,462,491, Feb. 22.
Hallett Manufacturing Company, assignee: *See*—
Hallett, Elton C.
Hallowell, Alban T., Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Aryl trichlorothio acetates in elastomer treatment. 2,462,742, Feb. 22.
Halpert, Percy, Kew Gardens, C. A. Frische, and J. L. Bird, Lake Success, and O. R. Esval, Huntington, N. Y., assignors to The Sperry Corporation. Rate circuits. 2,462,095, Feb. 22.
Hamel, Georges R., Paris, France. Multicylinder engine 2,462,492, Feb. 22.

Hamer, Leland S., Long Beach, assignor of one-fourth to P. A. Dewhirst, Los Angeles, Calif. Seal for pipe-line fittings. 2,462,493, Feb. 22.
Hamer, Leland S., Long Beach, assignor of one-fourth to P. A. Dewhirst, Los Angeles, Calif. Pipe fitting. 2,462,494, Feb. 22.
Hamilton, Harry S., United States Air Forces. Litter loading device. 2,462,006, Feb. 22.
Hammond Machinery Builders, Inc., assignee: *See*—
Sutton, Donald E.
Handel, Oscar C., Kansas City, Kans. Door-cupboard and tray. 2,462,743, Feb. 22.
Handler, Charles, assignee: *See*—
Green, Martin.
Hanford, Russell E.: *See*—
Light, George G., and Hanford.
Harbison-Walker Refractories Company, assignee: *See*—
Rochow, William F.
Harmon, Jesse, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing aqueous emulsions of polyethylenes. 2,462,390, Feb. 22.
Harmon, William S.: *See*—
Bassford, Henry H., Jr., Harmon, and Mahoney.
Harnischfeger Corporation, assignee: *See*—
Jacobs, Henry S.

Re ff, Orland M., and Hartough.
Hartough, Howard D., Pitman, N. J., A. I. Kosak, Columbus, Ohio, and E. E. Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated. Treatment of aromatic hydrocarbons. 2,462,391, Feb. 22.
Harvel Corporation, The, assignee: *See*—
Harvey, Mortimer T.
Harvey, Herbert: *See*—
Thompson, Robert H., and Harvey.
Harvey, Leo M., assignee: *See*—
Thompson, Robert H., and Harvey.
Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Aldehyde-(phenol-phenol ether reaction products) reaction products and producing them. 2,462,636, Feb. 22.
Haseltine, Stacy B., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Ratchet and pawl mechanism for hand brakes. 2,462,183, Feb. 22.
Haseltine, Stacy B., La Grange, assignor to Cook Electric Company, Chicago, Ill. Bomb band assembly. 2,462,744, Feb. 22.
Hasselquist, Victor H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for stretching elastic covers. 2,462,318, Feb. 22.
Hathaway, Clarence B., and R. F. Woll, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Quiet single-phase motor. 2,462,184, Feb. 22.
Hauser, Paul M., Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Moistureproof, heat-sealable wrapping material and process. 2,462,185, Feb. 22.
Hautau, Charles F., Huntington Woods, assignor, by mesne assignments, to Appliance Development Company, Oak Park, Mich. Fluid pump. 2,462,392, Feb. 22.
Hawkins, Charles R., Los Angeles, Calif. Pressing iron rack. 2,462,319, Feb. 22.
Haydon, William H., Arlington, Va. Sharpening device. 2,462,637, Feb. 22.
Haynes, Harold E., Indianapolis, Ind., assignor to Radio Corporation of America. Reproduction of sound. 2,462,263, Feb. 22.
Haynes, Nathan M., New York, N. Y. Coil-winding machine. 2,462,393, Feb. 22.
Hazeltine Research, Inc., assignee: *See*—
Hirsch, Charles J.
Heiman, Sidney J., St. Louis, Mo. Dispensing mechanism. 2,462,394, Feb. 22.
Heiman, Sidney J., St. Louis, Mo. Concentric shell hot-air heater. 2,462,395, Feb. 22.
Hein, Carl C., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rectifier. 2,462,186, Feb. 22.
Heinz, Winfield B., Round Brook, and A. E. Kittredge, Audubon, N. J., and J. G. Williams, Philadelphia, Pa.; said Williams assignor, by mesne assignments, to Turbo Engineering Corporation, and said Heinz and Kittredge assignors, by mesne assignments, to Penn Industrial Instrument Corporation. Control system. 2,462,097, Feb. 22.
Heinze Electric Company, assignee: *See*—
Watson, Thomas E.
Helixon, Mathilda A., Winthrop Harbor, Ill. Nursing bottle holder. 2,462,187, Feb. 22.
Heller, Richard D., Tujunga, Calif. Wire straightener. 2,462,396, Feb. 22.
Hemphill, Ralph, assignee: *See*—
Delmonte, John.
Hendricks, Cornelius, assignor to Applied Arts Corporation, Grand Rapids, Mich. Ash receiver. 2,462,397, Feb. 22.
Herbig, Henry F.: *See*—
Deakin, Gerald, and Herbig.
Herold, Edward W., Verona, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,462,496, Feb. 22.
Herrick, Roswell H., Oak Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Radio direction finder. 2,462,188, Feb. 22.
Hertrich, Joseph, assignor to The Western States Machine Company, Hamilton, Ohio. Continuous centrifugal machine. 2,462,098, Feb. 22.
Herwig, Robert S., North Arlington, assignor to Bendix Aviation Corporation, Teterboro, N. J. Brush. 2,462,055, Feb. 22.
Hess, Jack, Houston, Tex. Bale tie buckle. 2,462,264, Feb. 22.
Hess, Mattie P., Maywood, and A. E. Siahrs, assignors, by mesne assignments, to Krim-Ko Corporation, Chicago, Ill. Irish moss extract and its production. 2,462,398, Feb. 22.
Hess, Willis C., assignor to Trico Products Corporation, Buffalo, N. Y. Valve for windshield cleaners. 2,462,189, Feb 22.
Hetherington, Harry C., Charleston, W. Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Corrosion inhibiting process. 2,462,488, Feb. 22.
Heyman, Albert A., assignor to Maryland Baking Company, Inc., Baltimore, Md. Ice-cream cup. 2,462,497, Feb. 22.
Hickman, Clarence N., Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War. Rocket projectile. 2,462,099, Feb. 22.
Himoff, Morris G., and S. L. Casella, assignors to Morey Machinery Co., Inc., New York, N. Y. Cross slides and control mechanism therefor. 2,462,498, Feb. 22.
Hinchman, William H. D., Detroit, Mich. Conduit spacer. 2,462,399, Feb. 22.
Hipple, John A., Jr., Verona, and D. J. Grove, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Amplifier for small direct currents. 2,462,190, Feb. 22.
Hirchak, John, assignee: *See*—
Abeling, Raymond O.
Hirsch, Charles J., Douglaston, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Frequency divider. 2,462,265, Feb. 22.
Hoak, Richard D., Mount Lebanon Township, Allegheny County, assignor to Mellon Institute of Industrial Research, Pittsburgh, Pa. Recovering manganese values from manganese ores. 2,462,499, Feb. 22.
Hodge, William F., Lyndhurst, Ohio, assignor to General Electric Company. Starting and operating circuit for electric discharge devices. 2,462,320, Feb. 22.
Hodnette, John K., and A. D. Forbes, Sharon, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Winding coils. 2,462,191, Feb. 22.
Hoffer, James P., Detroit, assignor to Superdraulic Corporation, Dearborn, Mich. Compensator control for pumps. 2,462,500, Feb. 22.
Hohwart, Ernest F.: *See*—
Hohwart, George and E. F.
Hohwart, George and E. F., Detroit, assignors to N. A. Woodworth Company, Ferndale, Mich. Diaphragm chuck. 2,462,501, Feb. 22.
Hollabaugh, Max G., Jackson Heights, assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y. Demodulator system for time modulated pulses. 2,462,100, Feb. 22.
Holloway, Dennis G.: *See*—
Blumlein, Alan D., Connell, and Holloway.
Holmes, John E., Auburndale, assignor to C. W. Carlson, Atlantic, Mass. Rack. 2,462,321, Feb. 22.
Homkes, Bartell J.: *See*—
Van Vliet, Paul D., and Homkes.
Hoover, Fred W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of dihydrodicyclopentadienyl methacrylate with esters of methacrylic acid. 2,462,400, Feb. 22.
Horgen, Helge B., Lyon, France, assignor of nine-tenths to R. P. Pescara, Lisbon, Portugal, and one-tenth to Societe d' Etudes et de Participations, Eau, Gas, Electricite, Energie S. A., Geneva, Switzerland. Free piston machine provided with pneumatic starting means. 2,462,745, Feb. 22.
Horton, Erwin C., Hamburg, and E. V. Schaal, East Aurora, assignors to Trico Products Corporation, Buffalo, N. Y. Motor shaft. 2,462,192, Feb. 22.
Horton, George T., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Elevated tank. 2,462,101, Feb. 22.
Horton Manufacturing Company, The, assignee: *See*—
Lagerblade, Herbert C., and Root.
Horwitz, Adolf L., assignor to Olefira Limited, London, England. Assembly device for spelling blocks. 2,462,502, Feb. 22.
Houghton, Leslie W.: *See*—
Chatterjea, Prafulla K., and Houghton.

Howard, George H., Long Beach, Calif. Static wheel balancing apparatus. 2,462,266, Feb. 22.
Hubbard, Merle R., Cedar Rapids, Iowa, assignor to Collins Radio Company. High-frequency resonator. 2,462,267, Feb. 22.
Hudson, Ralph G., Los Angeles, Calif. Method of and apparatus for producing a composite image. 2,462,268, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,322, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,323, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,324, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,325, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,326, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,327, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,328, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,329, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,330, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,331, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,332, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,333, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,334, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,335, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,336, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,337, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,338, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,339, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,340, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,341, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,342, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,343, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,344, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,345, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,346, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,347, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,348, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,349, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,350, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,351, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,352, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,353, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,354, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,355, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,356, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,357, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,358, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,359, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,360, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,361, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,362, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,363, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,364, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,365, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,366, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,367, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,368, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,369, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,370, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,371, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,372, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,373, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,374, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,375, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,376, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,377, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,378, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,379, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,380, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,381, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,382, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,383, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,384, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,385, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,386, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,387, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,388, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,389, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,390, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,391, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,392, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,393, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,394, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,395, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,396, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,397, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,398, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,399, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,400, Feb. 22.
Hughes, Howard R., Houston, Tex. Method of and apparatus for drilling wells. 2,462,401, Feb. 22.
Johnson, Elvira, Martinez, Calif. Knitting. 2,462,401, Feb. 22.
Johnson, George T., Chicago, Ill. Light condenser for picture projection units. 2,462,749, Feb. 22.

Konen, James C., and B. W. Schroeder, Minneapolis, Minn., assignors to Archer-Daniels-Midland Company. Protein water paint vehicles having increased wet abrasion resistance. 2,462,811, Feb. 22.
Le Tourneau, Robert G., Longview, Tex., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Induction motor rotor. 2,462,516, Feb. 22.
Leverens, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Manufacture of

Howard, George H., Long Beach, Calif. Static wheel balancing apparatus. 2,462,266, Feb. 22.
Hubbard, Merle E., Cedar Rapids, Iowa, assignor to Collins Radio Company. High-frequency resonator. 2,462,639, Feb. 22.
Huber, Louis C., assignee: *See*—
Richeson, Sanford E., and Allegro.
Huechberger, Alfred P.: *See*—
Griffith, Ivor, and Huechberger.
Huge, Henry M., Lorain, Ohio, assignor to Lorain Products Corporation. Frequency reducer. 2,462,322, Feb. 22.
Hulsberg, William E., Hinsdale, assignor to Universal Oil Products Company, Chicago, Ill. Catalyst regenerator and recovery apparatus. 2,462,195, Feb. 22.
Hurst, Peter F., Horton, assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich. Detachable hose fitting. 2,462,328, Feb. 22.
Hutchinson, Gilbert E.: *See*—
Finlay, Walter L., and Hutchinson.
Hutchinson, Willis S., St. Paul, Minn., assignor to Mathieson Chemical Corporation. Simultaneous production of chlorine dioxide and nitrogen trichloride. 2,462,194, Feb. 22.
Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organo-siloxane polymers and preparing them. 2,462,267, Feb. 22.
Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Making methyl siloxanes. 2,462,640, Feb. 22.
Hyland, William A., Horicon, Wis., assignor to John Deere Van Brunt Company. Field cultivator. 2,462,641, Feb. 22.
Industrial Metal Products Laboratory, assignee: *See*—
Flaherty, Bartholomew R.
Inman, Hollis C., Miami, Fla. Electric fluid heater. 2,462,746, Feb. 22.
Interchemical Corporation, assignee: *See*—
Neuberg, Carl, and Lustig.
International Smelting and Refining Company, assignee: *See*—
Shropshire, William W.
International Standard Electric Corporation, assignee: *See*—
Abler, Jean, and Sels.

Ward, George L.
Webb, John K.
Istvan, Edwin J., Cleveland, Ohio. Modulated reflecting-resonant target. 2,462,102, Feb. 22.
Jacobs, F. L., Co., assignee: *See*—
Burdick, Emory F.
Erickson, Charles A.
Jacobs, Henry S., assignor to Harnischfeger Corporation, Milwaukee, Wis. Winch control. 2,462,747, Feb. 22.
Jacobson, Eugene W., Oakmont, H. O. Creassi, Penn Township, Allegheny County, and J. E. Aikins, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for filling containers of pressure fluids. 2,462,642, Feb. 22.
Jacobson, Ilamae W., assignor to Kickernick, Inc., Minneapolis, Minn. Maternity panty garment. 2,462,195, Feb. 22.
Jacobson, Ralph A.: *See*—
Brubaker, Merlin M., and Jacobson.
Jaeger Machine Company, The, assignee: *See*—
Van Voorhis, William G.
Jantzen Knitting Mills, assignee: *See*—
Wittenberg, Margaret H.
Jennings, Andrew B., New Brunswick, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic plural emulsion layer stripping film. 2,462,503, Feb. 22.
Jerabek, Robert D.: *See*—
Schulman, Earl L., and Jerabek.
Jernstedt, George W., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Protective phosphate coatings for metal surfaces. 2,462,196, Feb. 22.
Jernstedt, George W., Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Etching method. 2,462,197, Feb. 22.
Jet-Heet, Inc., assignee: *See*—
MacCracken, Calvin D.
Jirsa, Emil F.: *See*—
Worthington, Wayne H., and Jirsa.
Johnson, Elvira, Martines, Calif. Knitting. 2,462,401, Feb. 22.
Johnson, George T., Chicago, Ill. Light condenser for picture projection units. 2,462,749, Feb. 22.
Johnson, John, Grand Forks, N. Dak. Pipe plug. 2,462,748, Feb. 22.
Johnson, Philip H., and L. W. Tripp, Hounslow, assignors to Roadless Traction Limited, Hounslow, Middlesex, England. Endless track for vehicles. 2,462,643, Feb. 22.
Johnson, Robert, Verona, assignor to Koppers Company, Inc., Pittsburgh, Pa. Preparation of alpha-ketodihydronaphthalene. 2,462,103, Feb. 22.
Johnson, Roger C., Moline, Ill. Thermostatic valve. 2,462,198, Feb. 22.
Jones, Lester L.: *See*—
Mikulas, William, and Jones.
Joyce, Robert M., Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fluorinated hydrocarbons. 2,462,402, Feb. 22.
Julluson, Charles A., Fort Worth, Tex. Shoe with resilient closure means. 2,462,324, Feb. 22.
Jungst, Homer V., deceased, Seattle, Wash.; M. J. Jungst, executrix. Camber adjusting tool. 2,462,403, Feb. 22.

Christensen, Howard, and Kleimack.
Klein, Clarence J., Hollidays Cove, W. Va., assignor to National Steel Corporation. Anode bar jack. 2,462,506, Feb. 22.
Klein, Irving, New York, N. Y. Ornamental lampstand with bell. 2,462,750, Feb. 22.
Kleinhols, Milton P., East Chicago, Ind., assignor to Sinclair Refining Company, New York, N. Y. Making alpha, alpha'-thiodialiphatic acids. 2,462,200, Feb. 22.
Klyver, Soren M., Los Angeles, Calif. Game device. 2,462,507, Feb. 22.
Knelbler, Arthur R., assignor to Cooper's, Incorporated, Kenosha, Wis. Undergarment. 2,462,508, Feb. 22.
Knerr, Carl J.: *See*—
Pfender, Clifford D., Schultze, and Knerr.
Kniveton, James, Wyncote, Pa., assignor to Selas Corporation of America. Heat treating. 2,462,202, Feb. 22.
Knowland, Thomas M., Belmont, assignor to Boston Woven Hose and Rubber Company, Cambridge, Mass. Treating rubber scraps. 2,462,645, Feb. 22.
Knox, William H., Jr., R. T. Cochran, and W. R. Crudup, Nashville, Tenn., and W. S. Miller, Lake Charles, La., assignors to Victor Chemical Works. Manufacture of crystalline anhydrous monocalcium phosphate. 2,462,104, Feb. 22.
Kobbe, Joseph H., Savanna, Ill. Cranking jack for Diesel engines. 2,462,509, Feb. 22.
Kobey, Silas M., assignor to Potato Chip Equipment Corporation, Denver, Colo. Rotary potato slicer. 2,462,105, Feb. 22.
Koehler, Glenn, Madison, Wis. Speed control for induction motors. 2,462,751, Feb. 22.
Koehler, Gustave J., Los Angeles, Calif. Fluid valve. 2,462,646, Feb. 22.

Konen, James C., and B. W. Schroeder, Minneapolis, Minn., assignors to Archer-Daniels-Midland Company. Protein water paint vehicles having increased wet abrasion resistance. 2,462,811, Feb. 22.
Koppers Company, Inc., assignee: *See*—
Johnson, Robert.
Korman, Nathaniel I., Camden, N. J., assignor to Radio Corporation of America. Electron discharge device and associated circuit. 2,462,510, Feb. 22.
Kosak, Alvin I.: *See*—
Hartough, Howard D., Kosak, and Reid.
Koster, John R.: *See*—
Webb, Paul S., and Koster.
Kotches, Frank A., Princeton, N. J., and W. D. Tipton, Stoneleigh, Md., said Kotches assignor to W. D. Tipton, as trustee; E. B. Tipton, executrix of said W. D. Tipton, deceased. Showerhead. 2,462,752, Feb. 22.
Kovalsky, Joseph F., Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Speed regulating system. 2,462,203, Feb. 22.
Kosa, Charles A., Pittsburgh, Pa. Angle drill. 2,462,647, Feb. 22.
Kram, Walter, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electric transformer. 2,462,106, Feb. 22.
Kramer, Nathan, assignor to Kramer Trenton Company, Trenton, N. J. Producing condensers or the like for heat exchange apparatus. 2,462,511, Feb. 22.
Krempel, Alvin W., Milwaukee, Wis. Convertible cushion. 2,462,269, Feb. 22.
Kresky Mfg. Co., Inc., assignee: *See*—
Miller, Clarence A.
Krim-Ko Corporation, assignee: *See*—
Hess, Mattie P., and Siehrs.
Kritchevsky, Theodore, assignor to Ninol Development Co., Chicago, Ill. Preparation of diacetyl. 2,462,107, Feb. 22.
Krone, Howard C., River Edge, and W. Meyer, East Orange, assignors to Wheaton Brass Works, Newark, N. J. Valved coupling for fluid conducting lines. 2,462,512, Feb. 22.
Kucklinsky, Walter H., Paramus, N. J. Box folding machine and method. 2,462,513, Feb. 22.
Kuppin, Herbert, Piqua, Ohio. Hobbyhorse. 2,462,648, Feb. 22.
Kyle, William D., Jr., Milwaukee, and A. Van Ryan, South Milwaukee, Wis., assignors to Line Material Company. Circuit breaker. 2,462,753, Feb. 22.
Lagerblade, Herbert C., and D. J. Root, assignors to The Horton Manufacturing Company, Bristol, Conn. Golf club. 2,462,754, Feb. 22.
Lancaster Processes, Inc., assignee: *See*—
Robinson, Thomas.
Lane-Wells Company, assignee: *See*—
Smith, Arthur L.
Lange, Carl W., Erie, Pa., assignor to General Electric Company. Cooling arrangement for dynamoelectric machines. 2,462,649, Feb. 22.
Langkammerer, Carl M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Salts of adiponitrile sulfonic acid. 2,462,408, Feb. 22.
Langkammerer, Carl M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reaction products of 3-hexenedinitrile and certain aldehydes. 2,462,407, Feb. 22.
La Piana, Fred G., Providence, R. I., assignor to Stein, Hall Company, Inc., New York, N. Y. Warp sizing material. 2,462,108, Feb. 22.
Larkin, David, Kirkwood, assignor to Broderick & Bascom Rope Company, St. Louis, Mo. Reel. 2,462,408, Feb. 22.
Larson, Arthur G., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Multiple engine output equalising apparatus. 2,462,650, Feb. 22.
Lassen, Elvind U., Whitefish Bay, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for electric motor-driven traveling devices. 2,462,755, Feb. 22.
Lebertre, Maurice: *See*—
Mozzanini, Georges G., and Lebertre.
Lee, Frank H., Company, The, assignee: *See*—
Griffith, Ivor, and Huchberger.
Lee, Robert J.: *See*—
Wadsworth, Francis T., and Lee.
Lee, Robert J., La Marque, Tex., assignor to Pan American Refining Corporation, New York, N. Y. Alkylation and catalyst recovery. 2,462,793, Feb. 22.
Leeds, Winthrop M.: *See*—
Baker, Benjamin P., and Leeds.
Lehane, Timothy J., and E. H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation. Apparatus for the control of cooling systems. 2,462,514, Feb. 22.
Leichton, Leroy G., Cleveland, Ohio, assignor to General Electric Company. Filament connection for electric incandescent lamps. 2,462,325, Feb. 22.
Leopold, John N., Staten Island, N. Y. Shield for electric wall sockets. 2,462,756, Feb. 22.
Lerch, Brooke W., Baltimore, Md., assignor to Western Electric Company, Incorporated. New York, N. Y. Method of and apparatus for braiding. 2,462,515, Feb. 22.
Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.
Le Tourneau, Robert G., Longview, Tex., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Induction motor rotor. 2,462,516, Feb. 22.
Leverens, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Manufacture of luminescent materials. 2,462,517, Feb. 22.
Levin, Claude C., Jacksonville, Fla. Shirt and trouser holder. 2,462,409, Feb. 22.
Levy, Maurice M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Synchronised pulse generator. 2,462,109, Feb. 22.
Levy, Maurice M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Demodulation of time-modulated electrical pulses. 2,462,110, Feb. 22.
Levy, Maurice M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Multichannel pulse distributor system. 2,462,111, Feb. 22.
Light, George G., Alexandria, Va., and R. E. Hanford, Forest Hills, assignors to The Western Union Telegraph Company, New York, N. Y. Telegraph system. 2,462,112, Feb. 22.
Lindenblad, Nils E., Rocky Point, N. Y., assignor to Radio Corporation of America. Folded transmission line. 2,462,410, Feb. 22.
Lindler, George B., assignee: *See*—
Burum, Fisher C.
Line Material Company, assignee: *See*—
Kyle, William D., Jr., and Van Ryan.
Trognor, Arthur M.
Lipson, Leonard B., Arlington County, Va. Method and apparatus for physicochemical analysis. 2,462,270, Feb. 22.
Lipson, Samuel, H. Rothenthal, and H. Markus, Philadelphia, Pa. Wax injection apparatus. 2,462,113, Feb. 22.
Liquid Carbonic Corporation, assignee: *See*—
Van Vliet, Paul D., and Homkes.
Little, Charles Henry, Cleveland Heights, and Charles Hubbard Little, Cleveland, Ohio. Drafting machine. 2,462,271, Feb. 22.
Little, Charles Hubbard: *See*—
Little, Charles Henry and Charles Hubbard.
Lochhead, John L., Springfield, Mass., assignor to the United States of America as represented by the Secretary of War. Sear release mechanism. 2,462,114, Feb. 22.
Lockwood, William H.: *See*—
Detrick, Stanley R., Lockwood, and Whitman.
Lorain Products Corporation, assignee: *See*—
Huge, Henry M.
Lord, Harold W., Schenectady, N. Y., assignor to General Electric Company. Electric induction apparatus. 2,462,651, Feb. 22.
Los Angeles Paper Box Factory, assignee: *See*—
Adams, Floyd W.
Loyce, Julius, South Amboy, N. J. Combined mixer and cooler for drinks. 2,462,757, Feb. 22.
Ludwig, Leon R., Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor with bore-centered bearings. 2,462,204, Feb. 22.
Luecke, Harry F., Herndon, Va. Freezing cabinet with refrigerating removable unit. 2,462,115, Feb. 22.
Lustig, Hilda: *See*—
Neuberg, Carl, and Lustig.
Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Rotary converter-coupling hydraulic power transmission. 2,462,652, Feb. 22.
MacCracken, Calvin D., New Rochelle, assignor to Jet-Heet, Inc., New York, N. Y. Air compressor. 2,462,518, Feb. 22.
Machlett Laboratories, Incorporated, assignee: *See*—
Machlett, Raymond R., and Steen.
Machlett, Raymond R., New Canaan, and G. W. Steen, Stamford, assignors to Machlett Laboratories, Incorporated, Springdale, Conn. Making metal-glass seals. 2,462,205, Feb. 22.
MacLachlan, Angus, New York, N. Y. Leak testing fixture for valves. 2,462,116, Feb. 22.
Magee, Alan W., Ellwood City, Pa. Key case. 2,462,206, Feb. 22.
Mahoney, John F.: *See*—
Bassford, Henry H., Jr., Harmon, and Mahoney.
Malle, Carrie A., Tulsa, Okla. Apple and pear corer. 2,462,411, Feb. 22.
Malkemus, John D., Allendale, assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Synthetic detergent compositions. 2,462,758, Feb. 22.
Manoog, John C., and W. H. Wakefield, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Electric weft detector for looms. 2,462,326, Feb. 22.
Mansfield, Judson H., assignor to Greenlee Bros. & Co., Rockford, Ill. Shaping attachment for tenoning machines. 2,462,653, Feb. 22.
Mansfield, Warren M., Glendale, assignor to Sta-Neet Corporation, Los Angeles, Calif. Hair cutting comb. 2,462,519, Feb. 22.
Marbach, William, Chicago, Ill. Roller window screen. 2,462,520, Feb. 22.
Marble, Jarvis C., assignee, trustee, et al.: *See*—
Boestad, Gustav K. W., and Eriksson.
Lysholm, Alf.

Marchant Calculating Machine Company, assignee: *See*—
Studley, Clarence K., Jr.
Mikeska, Louis A.: *See*—
Eby, Lawrence T., and Mikeska.

Muter, Arthur J., London, England. Parallel jaw pliers. 2,462,536, Feb. 22.
O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Navigation system. 2,462,764, Feb. 22.

Marchant Calculating Machine Company, assignee: *See*—
Studley, Clarence K., Jr.

Marey Machinery Co. Inc., assignee: *See*—
Casella, Secondo L.

Markus, Harold: *See*—
Lipson, Samuel, Rothenthal, and Markus.

Marriott, Roscoe H., Bingham Canyon, Utah. Spring oscillating chair. 2,462,521, Feb. 22.

Martin Elevator Company, assignee: *See*—
Schoenbaum, Joseph R.

Martin, George W., Eau Claire, Wis. Steering stabiliser. 2,462,272, Feb. 22.

Martin, Glen L., Company, The, assignee: *See*—
Wilkinson, Walter G.

Martin, James, Ferndale, assignor to Michigan Tool Company, Detroit, Mich. Grinding machine. 2,462,522, Feb. 22.

Martin, William, Jr., assignee: *See*—
Schoenbaum, Joseph R.

Maryland Baking Company, Inc., assignee: *See*—
Heyman, Albert A.

Mason, Thomas H., Peoria, Ill. Safety hasp keeper. 2,462,523, Feb. 22.

Matheson, Lorne A.: *See*—
Boyer, Raymond F., Matheson, and Reinhardt.

Matheson, Lorne A., and R. F. Boyer, assignor to The Dow Chemical Company, Midland, Mich. Vinylidene chloride compositions stable to light. 2,462,412, Feb. 22.

Mathieson Chemical Corporation, assignee: *See*—
Hutchinson, Willis S.

Mattedi, Minnie, Denver, Colo. Bedstead. 2,462,524, Feb. 22.

Matthews, W. N., Corporation, assignee: *See*—
Mosley, Carl E.

McBee, Karl T., La Fayette, and L. D. Bechtol, Indianapolis, assignors to Purdue Research Foundation, West Lafayette, Ind. Trifluoromethylhexachlorocyclohexane. 2,462,854, Feb. 22.

McCauley, Roy B., Chicago Heights, Ill. Hard alloys. 2,462,056, Feb. 22.

McClelland, Donald C.: *See*—
Riley, Melvin A., and McClelland.

McCormick, Guy, Jr., Newport News, Va. Window shade bracket. 2,462,526, Feb. 22.

McCown, William E.: *See*—
Young, John E., and McCown.

McCoy, Claudius T., Narberth, assignor to Philco Corporation, Philadelphia, Pa. Apparatus for receiving frequency-modulated waves. 2,462,759, Feb. 22.

McCue, Walter G.: *See*—
Brier, Ernest J., and McCue.

McHenry, Loren C., Rivermines, Mo. Speed indicating device. 2,462,655, Feb. 22.

McKenzie, Maxwell G., executor: *See*—
Nightingall, Victor C. J.

McLaughlin, Therese B., Bronx, N. Y. Garment. 2,462,414, Feb. 22.

McLendon, Alphonso D., Palo Alto, Calif. Curb line indicator for automobiles. 2,462,606, Feb. 22.

McNair, Samuel H., Philadelphia, Pa. Pool game table. 2,462,526, Feb. 22.

McNairy, Jacob W., Bridgeport, Conn., assignor to General Electric Company. Clutch and brake mechanism. 2,462,657, Feb. 22.

McQueen, David M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic antihalation elements. 2,462,527, Feb. 22.

Meath, William B., Syracuse, N. Y., assignor to Allied Chemical & Dye Corporation. Production of formaldehyde. 2,462,413, Feb. 22.

Mellon Institute of Industrial Research, assignee: *See*—
Hoak, Richard D.

Meneses y Compania, assignee: *See*—
Castellanos, Gonzalo M.

Merck & Co., Inc., assignee: *See*—
Bassford, Henry H., Jr., Harmon, and Mahoney.
Folkers, Karl.
Sarett, Lewis H.

Merrill, Leslie M.: *See*—
Lyaholm, Alf.

Merrill, Leslie M., assignee, trustee, et al.: *See*—
Boestad, Gustav K., and Eriksson.

Mershon, Clarence L., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Temperature regulating system. 2,462,207, Feb. 22.

Metal Textile Corporation, assignee: *See*—
Goodloe, Alfred M.

Metcalf, Earl H., Ridgefield Park, N. J. Coryholder. 2,462,273, Feb. 22.

Meyer, Frieda H., assignee: *See*—
Meyer, William F.

Meyer, Walter, assignor to M. T. Cole, Chicago, Ill., doing business as M. T. Cole Co. Finger cot. 2,462,208, Feb. 22.

Meyer, William: *See*—
Krone, Howard C., and Meyer.

Meyer, William F., assignor to F. H. Meyer, Chicago, Ill. Folding clothesbasket carrier. 2,462,274, Feb. 22.

Michigan Tool Company, assignee: *See*—
Martin, James.

Mihelic, John P.: *See*—
Guffey, Wayne W., Mihelic, Piper, and Engstrom.

Mikuska, Louis A.: *See*—
Eby, Lawrence T., and Mikuska.

Mikkelson, Ward C., and J. Anthes, U. S. Army. Selsyn transmission by radio. 2,462,117, Feb. 22.

Mikulas, William, West Brighton, Staten Island, N. Y., and L. L. Jones, Oradell, assignors to Cosmar Products Corporation, Newark, N. J. Automatic lock slider for slide fasteners. 2,462,528, Feb. 22.

Miller, Clarence A., assignor to Kresky Mfg. Co., Inc., Petaluma, Calif. Horizontal oil burner of the tray type. 2,462,529, Feb. 22.

Miller, Joseph B., assignor of fifty per cent to K. G. Miller, Natches, Miss. Light bulb stem and socket. 2,462,530, Feb. 22.

Miller, Katherine G., assignee: *See*—
Miller, Joseph B.

Miller, Warren S.: *See*—
Knox, William H., Jr., Cochran, Crudup, and Miller.

Mills, John E., East Orange, assignor to Excel Automatic Products, Inc., Newark, N. J. Automatic drill press. 2,462,327, Feb. 22.

Mills, Robert V., M. G. Clarke, and H. R. Ruff, Rugby, England, assignors to General Electric Company. Starting and operating circuits for electric discharge devices. 2,462,328, Feb. 22.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Haseltine, Stacy B.

Minkler, Chester T., Newport, R. I. Torpedo exploding mechanism. 2,462,118, Feb. 22.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Gille, Willis H.
Smith, Edgar M.

Minshall, Burton, Brattleboro, Vt. Musical vibration translating unit. 2,462,531, Feb. 22.

Minter, Herbert F., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Resins and conductors insulated therewith. 2,462,209, Feb. 22.

Mishawaka Rubber & Woolen Manufacturing Company, assignee: *See*—
Van Dinter, George L., and Austin.

Mitchell, Harold S., Chicago, L. E. Kay, Worth, and A. S. Hartanov, and J. M. Ramsbotton, assignors to Swift & Company, Chicago, Ill. Protective coatings for fresh frozen meats. 2,462,760, Feb. 22.

Moe, Owen A., Minneapolis, Minn., assignor to General Mills, Inc. Starch esters. 2,462,210, Feb. 22.

Moffett, Eugene W., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Composition comprising an amide-aldehyde resin and as a plasticizer a polyester of a dihydric ether of propylene glycol and a dicarboxylic acid. 2,462,658, Feb. 22.

Mojonnier, Harry G., Oak Park, Ill. Evaporator having refrigerant recirculation means. 2,462,329, Feb. 22.

Molotzak, George C., Coaldale, Pa. Hermetically sealed, self-lubricating slide bearing. 2,462,659, Feb. 22.

Momberg, James M., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Inductor alternator. 2,462,761, Feb. 22.

Monsanto Chemical Company, assignee: *See*—
Throdahl, Monte C.

Moore, Clyde L., Cleveland, Ohio. Tractor fifth-wheel safety lock. 2,462,211, Feb. 22.

Moore, Cyril A., Springfield, Mass., assignor to the United States of America as represented by the Secretary of War. Gas regulating device for firearms. 2,462,119, Feb. 22.

Moore, James C., Wichita, Kans. Battery cable clamp. 2,462,660, Feb. 22.

Morey Machinery Co., Inc., assignee: *See*—
Himoff, Morris G., and Casella.

Morris, Frank A., Rochester, N. Y., assignor to Stromberg-Carlson Company. Sound system which compensates for variable noise levels. 2,462,532, Feb. 22.

Morton, George A., Haddon Heights, and L. E. Flory, Oaklyn, N. J., assignors to Radio Corporation of America. Electronic computer. 2,462,275, Feb. 22.

Mosley, Carl E., Overland, assignor to W. N. Matthews Corporation, St. Louis, Mo. Protective switch. 2,462,212, Feb. 22.

Moynihan, John J., Boston, Mass., assignor of one-half to J. B. Brennan, Bratenahl, Ohio. Electric thrust device. 2,462,533, Feb. 22.

Mozzanini, Georges G., La Garenne Colombes, and M. Lebertre, Neuilly-sur-Seine, France. Speed controlling means for direct current motors. 2,462,120, Feb. 22.

Mueller, John A., Milwaukee, Wis. Seeder conveyer. 2,462,276, Feb. 22.

Mueller, Otto N., Sheffield, Ala., assignor to Reynolds Metals Company, Richmond, Va. Demountable shelving. 2,462,330, Feb. 22.

Muhlack, George, Philadelphia, Pa. Jig for forming mitered pipe joints. 2,462,121, Feb. 22.

Mumma, Robert E.: *See*—
Desch, Joseph R., Guiden, and Mumma.

Munday, John C., Cranford, N. J., assignor to Standard Oil Development Company. Fluidisation process for producing aluminum. 2,462,661, Feb. 22.

Murphy, John M., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus with charging plug. 2,462,535, Feb. 22.

Murray, Otis W., Fords, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Light-sensitive photographic element. 2,462,534, Feb. 22.

Muter, Arthur J., London, England. Parallel jaw pliers. 2,462,536, Feb. 22.

Myers, Clayton S., Westfield, N. J., assignor to Bakelite Corporation. Polyethylene compositions. 2,462,331, Feb. 22.

Mykiatiuk, Joseph, Toronto, Ontario, Canada. Safety housing for gas burner grills. 2,462,537, Feb. 22.

Nagel, George W., and M. A. Schultz, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Phase angle meter. 2,462,213, Feb. 22.

Nagel, Joseph S., Santa Ana, Calif. Building construction. 2,462,415, Feb. 22.

Nagel, Joseph S., Santa Ana, Calif. Thermal insulating building material and its manufacture. 2,462,538, Feb. 22.

Namur, Carl A., assignor to Specialty Brass Company, Incorporated, Kenosha, Wis. Rotary pump with easily removable rotor. 2,462,214, Feb. 22.

Nardin, William T., Moorestown, assignor to United States Gasket Company, Camden, N. J. Gasket centering means. 2,462,762, Feb. 22.

National Cash Register Company, assignee: *See*—
Desch, Joseph R., Guiden, and Mumma.

National Steel Corporation, assignee: *See*—
Klein, Clarence J.
Thompson, Ralph N.

Naugle, John J., New York, N. Y. Preparing an activated magnesium oxide. 2,462,277, Feb. 22.

Neely, William H., Cleveland, and S. G. Blumensaadt, Beachwood Village, assignors to The Universal Wire Spring Company, Cleveland, Ohio. Wire spring structure for seat and back constructions. 2,462,539, Feb. 22.

Nelson, Arthur E., University City, Mo. Can opener 2,462,416, Feb. 22.

Nelson, Joseph F., Elizabeth, N. J., assignor to Standard Oil Development Company. Incorporating antioxidants into synthetic rubbery isobutylene polymers. 2,462,123. Feb. 22.

Nelson, Manley R., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo. Casting, forging, and heat treating cast iron grinding balls. 2,462,122, Feb. 22.

Neuberg, Carl, and H. Lustig, assignors to Interchemical Corporation, New York, N. Y. Manufacture of amino acids. 2,462,124, Feb. 22.

Neumann, Jan, Brunn, Czechoslovakia. Button. 2,462,332, Feb. 22.

New York Air Brake Company, The, assignee: *See*—
Whittingham, David J.

Newcom, Harvey C., Alameda, Calif. Cigarette holder. 2,462,333, Feb. 22.

Newton, Frank E.: *See*—
Bray, Frederick H., and Newton.

Niceley, Thomas J., Tonopah, Nev. Stope jack. 2,462,662 Feb. 22.

Nicodemus, Carroll N., and A. E. Gregg, Ashland, Ohio. Release coupling. 2,462,540, Feb. 22.

Nightingall, Charles M. G., executor: *See*—
Nightingall, Victor C. J.

Nightingall, Ruth V., executor: *See*—
Nightingall, Victor C. J.

Nightingall, Victor C. J., deceased, Heidelberg, Victoria, by Ruth V. Nightingall, A. M. Old, C. M. G. Nightingall, J. B. Aitken, and M. G. McKenzie, executors, Melbourne, assignors to Di-Met Proprietary Limited, West Melbourne, Victoria, Australia. Protectively coated ferrous metal surfaces and producing same. 2,462,763, Feb. 22.

Ninol Development Co., assignee: *See*—
Kritchevsky, Theodore.

Norden, Carl L., New York, assignor, by mesne assignments, to The Norden Laboratories Corporation, White Plains, N. Y. Erecting system for gyroscopes. 2,462,541, Feb. 22.

Norden Laboratories Corporation, The, assignee: *See*—
Norden, Carl L.

Norman, William Z., and J. Billig, New York, N. Y., assignors to Bilnor Corp. Combined bag and inflatable pillow. 2,462,215, Feb. 22.

Norris, Frank A., Minneapolis, Minn., assignor to General Mills, Inc. Stabilization of oleaginous materials. 2,462,663, Feb. 22.

Norris, Frank A., Minneapolis, Minn., assignor to General Mills, Inc. Stabilization of oleaginous materials. 2,462,664, Feb. 22.

Northern Patent Developments, Limited, assignee: *See*—
Bartlett, Benson G. W.

Norton, Lowell E., Princeton Junction, N. J., assignor to Radio Corporation of America. Phase modulation system. 2,462,417, Feb. 22.

Nowak, Leon J., Jr., Chicago, Ill. Hydraulic balance. 2,462,216, Feb. 22.

Nye, William B., Lakewood, assignor of one-half to J. Fann, North Olmstead, Ohio. Window ventilator. 2,462,278, Feb. 22.

Nylok Corporation, The, assignee: *See*—
Boots, Edmund R.

Oakes, Lesley F., Alexandria, near Sydney, Australia, assignor to International Standard Electric Corporation, New York, N. Y. Electrophoretic coating of metal articles. 2,462,125, Feb. 22.

Oaks, Orion O., Summit, N. J., assignor, by mesne assignments, to Thermal Liquids, Inc., New York, N. Y. Valve for thermal systems. 2,462,217, Feb. 22.

O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Navigation system. 2,462,764, Feb. 22.

Oesterlein, William J., Wauwatosa, assignor to Harnischfeger Corporation, Milwaukee, Wis. Welded motor frame. 2,462,765, Feb. 22.

Oilgear Company, The, assignee: *See*—
Ferris, Walter.

Olafirn Limited, assignee: *See*—
Horwitz, Adolf I.

Olcott, Eugene L., Schenectady, N. Y., assignor to General Electric Company. Alloy. 2,462,665, Feb. 22.

Old, Aubrey M., executor: *See*—
Nightingall, Victor C. J.

Olsen, Karl M., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical translator and making it. 2,462,218, Feb. 22.

Olson, John W., and C. W. Bechle, Sycamore, Ill., assignors to Anaconda Wire and Cable Company. Tension control apparatus. 2,462,766, Feb. 22.

Omar, Alejandro G., assignor to Patentes Talgo, S. A., Madrid, Spain. Articulated railway vehicle. 2,462,666, Feb. 22.

O'Neal, Alfred C., Andalusia, Ala. Ever-ready rigid top for convertible automotive vehicles. 2,462,667, Feb. 22.

O'Reilly, John J., Chicago, Ill. Accelerator pedal and switch. 2,462,767, Feb. 22.

Ortleb, Douglas, St. Louis, Mo. Protector pad. 2,462,768, Feb. 22.

Owen, David E., assignee: *See*—
England, James M.

Owens, James B., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Spark gap device. 2,462,219, Feb. 22.

Paetow, Paul, Bryant, Iowa. Feed grinder. 2,462,542, Feb. 22.

Palmer, Richard F., Hastings, Mich. Wear plate for pin setting frames. 2,462,543, Feb. 22.

Pan American Refining Corporation, assignee: *See*—
Lee, Robert J.
Wadsworth, Francis T., and Lee.

Parker, Royce L., Addison, Ill. Steam treating apparatus. 2,462,220, Feb. 22.

Parker, Warde L., Los Angeles, Calif., assignor to United Aircraft Products, Inc., Dayton, Ohio. Valve actuating means. 2,462,544, Feb. 22.

Parnell, Edwin H., Sr., Greenville, S. C. Bait casting and trolling lure. 2,462,828, Feb. 22.

Parry, Frank, and B. P. Pinkvoss, Bridgeport, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Thread-tension device for sewing machines. 2,462,812, Feb. 22.

Passman, Charles, New York, N. Y., assignor to S. F. Bowser & Company, Ltd., Toronto, Ontario, Canada. Multiple compartment refrigerator, including controls for the refrigerating system thereof. 2,462,279, Feb. 22.

Patentes Talgo, S. A., assignee: *See*—
Omar, Alejandro G.

Payne, Frank E., Glencoe, Ill. Seal adaptor. 2,462,280, Feb. 22.

Peachman, Mary E., assignee: *See*—
Elder, Esther B.

Peat, Thomas D., New York, N. Y. Lathe attachment. 2,462,126, Feb. 22.

Pedersen, Charles J., and F. B. Downing, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Condensation products of pentaerythritylitetramine with beta-diketones and beta-hydroxy methylene ketones. 2,462,668, Feb. 22.

Pedersen, Hayes N., Racine, Wis. Stabilizable bicycle. 2,462,769, Feb. 22.

Peeples, James W., Dadeville, Ala. Electrical control system and operation. 2,462,546, Feb. 22.

Peeps, Donald J., assignor to The De Vilbiss Company, Toledo, Ohio. Spray gun. 2,462,419, Feb. 22.

Peglow, Albert H., Milwaukee, Wis. Jack accessory. 2,462,418, Feb. 22.

Peirce, Walter T., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Electric cable. 2,462,770, Feb. 22.

Pemberton, Edgar S., Banstead, assignor to British Industrial Solvents, Limited, London, England. Production of acetarylamides. 2,462,221, Feb. 22.

Penjaska, Paul A., Owosso, Mich. Modified plug gauge. 2,462,545, Feb. 22.

Penn Industrial Instrument Corporation, assignee: *See*—
Heins, Winfield B., Kittredge, and Williams.

Pennow, Willis A., Cleveland, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Beacon light. 2,462,222, Feb. 22.

Pennsylvania Industrial Chemical Corporation, assignee: *See*—
Burroughs, Samuel G.

Pennsylvania Salt Manufacturing Company, The, assignee: *See*—
Gall, John F.

Percy, Joseph H., New York, N. Y., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Process and apparatus for photocatalytic reactions. 2,462,669, Feb. 22.

Personal Products Corporation, The, assignee: *See*—
Gans, Henry.

Pescara, Raul P., assignee: *See*—
Horgen, Helge B.

Peterson, Gust W., Los Angeles, Calif. Turbine pump type

Radio Corporation of America, assignee: *See*—
Bedford, Alda V.
Crosby, Murray G.

Roach, David J., A. A. Clark, and G. W. Rienks, assignors to The Great Western Sugar Company, Denver, Colo. Beet harvesting means. 2,462,128, Feb. 22.

Roadless Traction Limited, assignee: *See*—
Johnson, Philip H., and Tripp.

Schiller, Morris, assignor of fifty per cent to A. Verkitus, Albany, N. Y. Combination pillow envelope and bed sheet. 2,462,760, Feb. 22.

Schiller, Saul, Brooklyn, N. Y. Automatic contour-stitching machines. 2,462,559, Feb. 22.

Schittelbauer, Anthony: *See*—

Pascara, Raul P., assignee: *See*—
Horgen, Helge B.
Peterson, Gust W., Los Angeles, Calif. Turbine pump type hydraulic coupling. 2,462,228, Feb. 22.
Pew, Joseph N., Jr., Lower Merion Township, Montgomery County, assignor to Sun Oil Company, Philadelphia, Pa. Ship of monolithic structure. 2,462,670, Feb. 22.
Pfender, Clifford D., A. Schultze, and C. J. Knerr, Evansville, Ind., assignors to Servel, Inc., New York, N. Y. Flue connector assembly for absorption refrigerators. 2,462,671, Feb. 22.
Pheazey, John R., and R. J. M. Andrews, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Electrically connecting wires to terminals. 2,462,127, Feb. 22.
Philco Corporation, assignee: *See*—
Farrow, Frederick B., Jr.
McCoy, Claudius T.
Rheams, Charles J. B.
Philips, Calvin, Seattle, Wash. Rail fastener. 2,462,771, Feb. 22.
Philips Laboratories, Inc., assignee: *See*—
Firth, Francis G.
Phillips Petroleum Company, assignee: *See*—
Carnell, Paul H.
Piane, John M., Hanover, N. H. Ski binding. 2,462,281, Feb. 22.
Picker X-Ray Corporation Waite Manufacturing Division, Inc., assignee *See*—
Stava, Robert J.
Pickford, Jack, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Latching mechanism. 2,462,282, Feb. 22.
Pierson, Adrian A., Cooperstown, N. Y. Radio shielding sealing gasket. 2,462,334, Feb. 22.
Pinder, William, Peterborough, England. Practice device for golf putting. 2,462,420, Feb. 22.
Pinkvoss, Berthold P.: *See*—
Parry, Frank, and Pinkvoss.
Piper, Henry V.: *See*—
Guffey, Wayne W., Mihelic, Piper, and Engstrom.
Pitha, John J., Jamaica, and R. Ward, assignors to Polytechnic Institute of Brooklyn, Brooklyn, N. Y. Doubly activated infrared phosphors and preparing same. 2,462,547, Feb. 22.
Pitt, Paul A., assignor to Solar Aircraft Company, San Diego, Calif. Crossflow heat exchanger. 2,462,421, Feb. 22.
Pittsburgh Consolidation Coal Company, assignee: *See*—
Davies, Caleb, Jr., and York.
Pittsburgh Plate Glass Company, assignee: *See*—
Botteron, Donald G.
Ellerman, George H.
Moffett, Eugene W.
Plambeck, Louis, Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymerizing vinyl halides. 2,462,422, Feb. 22.
Ploeg, Byron V., assignee: *See*—
Kimura, Tsuchinojo.
Polacsek, Maurice, Brooklyn, N. Y. Match splint. 2,462,772, Feb. 22.
Polacsek, Maurice, Brooklyn, N. Y. Match splint. 2,462,773, Feb. 22.
Pollock, Neil J., Chicago, Ill. Nail holder and punch. 2,462,774, Feb. 22.
Polydoroff, Wladimir J., Glencoe, Ill. Ferro magnetic variable high-frequency inductors. 2,462,423, Feb. 22.
Polytechnic Institute of Brooklyn, assignee: *See*—
Pitha, John J., and Ward.
Pontiere, Stanley M., Philadelphia, Pa., assignor of one-half to E. P. Grillo, Ocean City, N. J. Self-adjusting sea wall. 2,462,775, Feb. 22.
Poor & Company, assignee: *See*—
Preston, Frederick A.
Popplewell, Ranville A., South Coogee, near Sydney, assignor of one-half to W. G. Tate, Coogee, near Sydney, New South Wales, Australia. Wheelbarrow. 2,462,424, Feb. 22.
Portner, Louis, Margate City, N. J. Baker's peel. 2,462,672, Feb. 22.
Potato Chip Equipment Corporation, assignee: *See*—
Kobey, Silas M.
Powers, Frank B.: *See*—
Kilgore, Lee A., Godsey, Jr., Rose, and Powers.
Powers, Stephen J.: *See*—
Chatterjea, Prafulla K., and Powers.
Pratt, Irwin, Brooklyn, and W. B. Wollman, Jackson Heights, Long Island, N. Y. Article of jewelry and clasp therefor. 2,462,425, Feb. 22.
Preston, Frederick A., Lake Forest, assignor, by mesne assignments, to Poor & Company, Chicago, Ill. Single flange rail anchor. 2,462,548, Feb. 22.
Price, Robert I., Oakland, Calif. Cover for open tissue roll holders. 2,462,776, Feb. 22.
Pulliam, George E., Youngstown, Ohio. Shaft coupling. 2,462,549, Feb. 22.
Purdue Research Foundation, assignee: *See*—
Barney, Arthur L.
McBee, Earl T., and Bechtol.
Quirk, Justin P., and L. G. P. Hafner, assignors to United Wood Heel Company, St. Louis, Mo. Apparatus for turning wood heels. 2,462,673, Feb. 22.
Radio Corporation of America, assignee: *See*—
Bedford, Alda V.
Crosby, Murray G.
Hayner, Harold E.
Herold, Edward W.
Korman, Nathaniel I.
Leverenz, Humboldt W.
Lindenblad, Nils E.
Morton, George A., and Flory.

Rosenthal, Frits.
Snyder, Richard L., Jr.
Sziklai, George C.
Thompson, Leland E.
Uhlig, Erich J.
Wehner, Robert S.
Young, John E., and McCown.
Rambo, J. Bryan: *See*—
Young, Thomas J., and H. N., and Rambo.
Ramsbottom, John M.: *See*—
Mitchell, Harold S., Kay, Hartanov, and Ramsbottom.
Ramsbeck, George C., Chicago, Ill. Piston. 2,462,550, Feb. 22.
Rappl, Anton, Eggertsville, assignor to Trico Products Corporation, Buffalo, N. Y. Electric switch. 2,462,777, Feb. 22.
Rapuano, Henry J.: *See*—
Zimmerman, Charles H., and Rapuano.
Rathert, Gustav W., Webster Groves, assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical switch. 2,462,283, Feb. 22.
Rauch, Konrad, assignor to The Sheffield Corporation, Dayton, Ohio. Chuck. 2,462,284, Feb. 22.
Raytheon Manufacturing Company, assignee: *See*—
Smith, William V.
Stutsman, Paul W.
Reel, Benjamin, Products, Inc., assignee: *See*—
Yirava, Charles R.
Rees, Ned J., assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical switch. 2,462,285, Feb. 22.
Rehner, John, Jr., Westfield, and P. J. Flory, Cranford, N. J., assignors to Standard Oil Development Company. Chemical plasticizers or softeners for butyl rubber. 2,462,674, Feb. 22.
Reid, Ebenezer E.: *See*—
Hartough, Howard D., Kosak, and Reid.
Reiff, Orland M., Woodbury, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vavuum Oil Company, Incorporated. Preparation of polyalkylbenzyl phenols. 2,462,426, Feb. 22.
Reiman, Robert F., Fort Wayne, Ind. Convertible chair for infants. 2,462,675, Feb. 22.
Reinecke, Esther, assignee: *See*—
Rodriquez, Alfred.
Reinecke, Jean O., assignee: *See*—
Rodriquez, Alfred.
Reiner, Leopold, Orange, assignor to United Electronics Company, Newark, N. J. Getter structure. 2,462,813, Feb. 22.
Reinhardt, Bryson R., Mounds View Township, Ramsey County, Minn., assignor to General Electric Company. Starting switch for electric discharge devices. 2,462,335, Feb. 22.
Reinhardt, Robert C.: *See*—
Boyer, Raymond F., Matheson, and Reinhardt.
Remington Arms Company, Inc., assignee: *See*—
Catlin, John P.
Daniels, Frederick A.
Finlay, Walter L., and Hutchinson.
Gagne, Antoine F., Jr.
Renfrew Electric & Refrigerator Company Limited, assignee: *See*—
Beal, James F.
Renner, Darwin S., Dallas, Tex., assignor to Geophysical Service Incorporated. Amplitude control. 2,462,551, Feb. 22.
Renner, Darwin S., Dallas, Tex., assignor to Geophysical Service Incorporated. Initial attenuator control. 2,462,552, Feb. 22.
Reno, Hannah E., Grafton, Pa. Maternity dress. 2,462,553, Feb. 22.
Research Corporation, assignee: *See*—
Williams, Roger J.
Reynolds Metals Company, assignee: *See*—
Mueller, Otto N.
Rheams, Charles J. B., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Noise reducing radio receiver. 2,462,224, Feb. 22.
Rhodes, Herman S., Birmingham, Ala., assignor to St. Regis Paper Company, New York, N. Y. Bag packer and weigher with jigging device. 2,462,286, Feb. 22.
Richeson, Sanford E., Brooklyn, and J. A. Allegro, Maspeth, N. Y., assignors of one-third to L. C. Huber, Ridgewood, N. J. Safety valve. 2,462,287, Feb. 22.
Richter, Emil, Philadelphia, Pa. Yarn tensioning device. 2,462,288, Feb. 22.
Rienks, George W.: *See*—
Roach, David J., Clark, and Rienks.
Riley, Melvin A., and D. C. McClelland, assignors to The Baltimore Paper Box Company, Baltimore, Md. Bottle carton. 2,462,676, Feb. 22.
Ritter Company, Inc., assignee: *See*—
Ziegler, Eugene R.

Roach, David J., A. A. Clark, and G. W. Rienks, assignors to The Great Western Sugar Company, Denver, Colo. Beet harvesting means. 2,462,128, Feb. 22.
Roadless Traction Limited, assignee: *See*—
Johnson, Philip H., and Tripp.
Roberts, Charles H., Roscoe, Calif. Folding table. 2,462,677, Feb. 22.
Robeson, Max O.: *See*—
Bludworth, Joseph E., Robeson, and Truby.
Robinson, Joseph, New York, N. Y. Electric vaporizer. 2,462,129, Feb. 22.
Robinson, Thomas, assignor to Lancaster Processes, Inc., New York, N. Y. Apparatus for sonic pulverization and dispersion of materials. 2,462,554, Feb. 22.
Roche, John C., assignor of one-half to D. J. Zahanion, Battle Creek, Mich. Picks and like tools. 2,462,427, Feb. 22.
Roehow, William F., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa. Furnace refractory construction. 2,462,289, Feb. 22.
Rockwell Manufacturing Company, assignee: *See*—
Bergman, Charles P.
Roderick, Arthur R., Eagle River, Wis. Saw filing machine. 2,462,225, Feb. 22.
Rodriques, Alfred, assignor to J. F. Barnes, J. O. Reinecke, M. M. Barnes, and E. Reinecke, Chicago, Ill. Walker or toy vehicle. 2,462,814, Feb. 22.
Roedel, Milton J., Talleyville, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Catalysts for polymerizing olefins. 2,462,678, Feb. 22.
Roesti, Hans, assignor to Ciba Limited, Basel, Switzerland. Dyeing glass fibers. 2,462,428, Feb. 22.
Root, Donald J.: *See*—
Lagerblade, Herbert C., and Root.
Rose, Bennie A.: *See*—
Kilgore, Lee A., Godsey, Rose, and Powers.
Rosen, Al, Brooklyn, N. Y. Collapsible hanger. 2,462,778, Feb. 22.
Rosenau, Ila E., Seattle, Wash. Rainproof headwear. 2,462,679, Feb. 22.
Rosenow, Albert, Evergreen Park, Ill. Indicator attachment for machine tools. 2,462,226, Feb. 22.
Rosenthal, Frits, Crescent Park, Bellmawr, N. J., assignor to Radio Corporation of America. Copolymers of styrene and 4,4'-divinyl-biphenyl. 2,462,555, Feb. 22.
Rosenthal, Hyman: *See*—
Lipson, Samuel, Rosenthal, and Markus.
Rosenthal, Walter, New York, N. Y. Dropping funnel. 2,462,556, Feb. 22.
Roto-Matic Screen Printer, Ltd., assignee: *See*—
Fleisher, Harry, and Tillett.
Rudd, Ross, Springfield, Mass. Automatic mechanism for carbines. 2,462,130, Feb. 22.
Ruedrich, Paul M., Berkeley, Calif., assignor to Griffin Chemical Company. Preparation of oil soluble petroleum sulfonates. 2,462,829, Feb. 22.
Ruff, Harold R.: *See*—
Mills, Robert V., Clark, and Ruff.
Ruff, Harold R., Rugby, England, assignor to General Electric Company. Electric discharge device and operation. 2,462,336, Feb. 22.
Russell, Robert C., Cleveland Heights, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Gear shifting mechanism. 2,462,779, Feb. 22.
Rustin, Eugene H., Brooklyn, N. Y. Soldering iron. 2,462,131, Feb. 22.
Sachs, Milton, New York, N. Y. Scaffold. 2,462,429, Feb. 22.
St. Regis Paper Company, assignee: *See*—
Rhodes, Herman S.
Salmon, Reginald D., assignor to Creed and Company Limited, Croydon, England. Typewheel positioning mechanism for printing telegraph apparatus. 2,462,132, Feb. 22.
Sands, Jack E.: *See*—
Campbell, Kenneth S., and Sands.
Santee, Carl M., Dixon, Ill. Heat pump means for controlling the temperature of the walls of a room. 2,462,557, Feb. 22.
Sargent, Donald E., Easton, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymers from ethylene and carbon dioxide. 2,462,680, Feb. 22.
Sarett, Lewis H., Princeton, assignor to Merck & Co., Inc., Rahway, N. J. Process of treating pregnene compounds. 2,462,133, Feb. 22.
Sauer, Louis E., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Connector. 2,462,227, Feb. 22.
Sauvey, Lawrence E., Lakeside, Ohio. Fishhook supporting frame. 2,462,290, Feb. 22.
Schaal, Earl V.: *See*—
Horton, Erwin C., and Schaal.
Schaefer, Vincent J., Schenectady, N. Y., assignor to General Electric Company. Forming germanium films. 2,462,681, Feb. 22.
Schallis, Alvin: *See*—
Walcott, Raymond H., and Schallis.
Scheuermann, Joseph S., and T. N. Carter, Chicago, Ill., assignors to Cameron Machine Company, Brooklyn, N. Y. Tension control means for running web. 2,462,558, Feb. 22.

Schiller, Morris, assignor of fifty per cent to A. Verkitus, Albany, N. Y. Combination pillow envelope and bed sheet. 2,462,780, Feb. 22.
Schiller, Saul, Brooklyn, N. Y. Automatic contour-stitching machines. 2,462,559, Feb. 22.
Schittelbauer, Anthony: *See*—
Bauer, Joseph, and Schittelbauer.
Schmidt, Edward, Rutherford, N. J. Tiltable umbrellas. 2,462,560, Feb. 22.
Schneider, Allan K., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Sulfur-containing polyamides. 2,462,430, Feb. 22.
Schneider, Max S., Chicago, Ill. Article supporting rack. 2,462,431, Feb. 22.
Schneider, Siebert, Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Welding apparatus. 2,462,561, Feb. 22.
Schner, Charles, Jr., Hewlett, and F. Zeiser, Stewart Manor, assignors to Sentinel Products, Incorporated, New York, N. Y. Dispensing cabinet. 2,462,816, Feb. 22.
Schoenbaum, Joseph R., Roseland, N. J., assignor to W. Martin, Jr., doing business as Martin Elevator Company, New York, N. Y. Elevator position indicator. 2,462,781, Feb. 22.
Schroeder, Burton W.: *See*—
Konen, James C., and Schroeder.
Schubert, Homer M., Salem, Oreg. Cherry stemming and sorting machine. 2,462,682, Feb. 22.
Schulman, Earl L., and R. D. Jerabek, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Insulating material. 2,462,228, Feb. 22.
Schultz, Mortimer A.: *See*—
Nagel, George W., and *Schultz*.
Schultze, Albert: *See*—
Pfender, Clifford D., Schultze, and Knerr.
Schwab, John, Winnipeg, Manitoba, Canada. Lamp device. 2,462,562, Feb. 22.
Schwartz, Morris, and W. Castedello, assignors to The Kalart Company, Inc., Stamford, Conn. Plate holder with safety lock. 2,462,683, Feb. 22.
Scribner, Thornton S., Nevada City, Calif. Power scoop. 2,462,432, Feb. 22.
Scully, Charles T., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Remote control arrangement. 2,462,134, Feb. 22.
Searle, Norman E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of organic thiocyanates and isothiocyanates. 2,462,433, Feb. 22.
Sedgwick, Robert K., assignor to American Steel Foundries, Chicago, Ill. Valve system for hydraulic press circuit. 2,462,815, Feb. 22.
Selas Corporation of America, assignee: *See*—
Kniveton, James.
Sels, Jacques: *See*—
Ahler, Jean, and Sels.
Sentinel Products, Incorporated, assignee: *See*—
Schner, Charles, Jr., and Zeiser.
Servel, Inc., assignee: *See*—
Pfender, Clifford D., Schultze, and Knerr.
Sette, Frederick E., Alameda, Calif. Valve. 2,462,291, Feb. 22.
Seyforth, Rome C., Shelby, Ohio. Portable atomizer. 2,462,563, Feb. 22.
Shechter, Leon, East Orange, N. J., assignor to Bakelite Corporation. Preparation of unsaturated acid esters. 2,462,337, Feb. 22.
Sheffield Corporation, The, assignee: *See*—
Rauch, Konrad.
Shimrat, Moshe, by change of name: *See*—
Sieradzki, Mojzesz.
Shohan, Jacob B., West Orange, N. J., assignor to American Home Products Corporation, New York, N. Y. Production of totaquine. 2,462,782, Feb. 22.
Shropshire, William W., Chicago, Ill., assignor to International Smelting and Refining Company. Apparatus for refining siniciferous lead. 2,462,783, Feb. 22.
Shur-Antenna-Mount Inc., assignee: *See*—
Shur, John W.
Shur, John W., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y. Antenna construction. 2,462,229, Feb. 22.
Siehrs, Arthur E.: *See*—
Hess, Mattie P., and Siehrs.
Sieradzki, Mojzesz, Tel Aviv, Israel, now by judicial change of name M. Shimrat. Adding device. 2,462,338, Feb. 22.
Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Photoelectric exposure time and paper selector for photographic enlargers having slide rule type computers and stepwedges. 2,462,339, Feb. 22.
Simmon, Alfred, Jackson Heights, and L. L. Weisglass, New York, assignors to Simmon Brothers, Inc., Long Island City, N. Y. Print control device for photographic enlargers. 2,462,340, Feb. 22.
Simmon Brothers, Inc., assignee: *See*—
Simmon, Alfred.
Simmon, Alfred, and Weisglass.
Simplex Wire & Cable Co., assignee: *See*—
Freeman, Walter K.
Sinclair Refining Company, assignee: *See*—
Kleinhols, Milton P.
Singer Manufacturing Company, The, assignee: *See*—
Momberg, James W.
Parry, Frank, and Pinkvoss.

Sisson, Kenneth O.: *See*—
Clark, Kendall, and Sisson.
Skeen, John E., assignor to Sun Oil Company, Philadel-

Stanton, Robert E., Denver, Colo. Apparatus for uninterrupted reproduction of disk phonograph records. 2,462,435, Feb. 22.

Thomas, George C., Jr., Elizabeth, and C. A. Badeau, Westfield, assignors to The Thomas & Betts Co., Elizabeth, N. J. Cable connector. 2,462,818, Feb. 22.

Van Dinter, George L., Pomona, Calif., and W. E. Austin, assignors to Mishawaka Rubber & Woolen Manufacturing Company, Mishawaka, Ind. Boot form. 2,462,230, Feb. 22.

Simon, Kenneth O.: *See*—
Clark, Kendall, and Sisson.

Skeen, John E., assignor to Sun Oil Company, Philadelphia, Pa. Separation of polymers. 2,462,564, Feb. 22.

Skinner, Leslie A., Washington, D. C., assignor to United States of America as represented by the Secretary of War. Rocket primer. 2,462,135, Feb. 22.

Smith, Arthur L., Torrance, assignor to Lane-Wells Company, Los Angeles, Calif. Well perforating gun. 2,462,784, Feb. 22.

Smith, Edgar M., Trenton, N. J., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control instrument. 2,462,566, Feb. 22.

Smith, Franklin N., Aurora, Ill. One-way expansible band brake. 2,462,565, Feb. 22.

Smith, Lee T., Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture. Copolymers of tetra-allyl pentaerythritol. 2,462,817, Feb. 22.

Smith, Samuel H., Bucyrus, Ohio. Heat exchanger and making same. 2,462,136, Feb. 22.

Smith, William Y., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device. 2,462,137, Feb. 22.

Smith, William W., Houston, Tex. Outside pipe cutter. 2,462,230, Feb. 22.

Snell, Harold T., El Paso, Tex. Fluid velocity governor. 2,462,785, Feb. 22.

Snow-Nabstedt Gear Corporation, The, assignee: *See*—
Berndtson, John O.

Snyder, Richard L., Jr., Princeton, N. J., assignor to Radio Corporation of America. Light interference distance measuring device having photoelectric means. 2,462,292, Feb. 22.

Societe d'Etudes et de Participations, Eau, Gas, Electricite, Energie S. A., assignee: *See*—
Horgen, Helge B.

Societe Genevoise d'Instruments de Physique, assignee: *See*—
Turrettini, Fernand.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Ferguson, Leslie L.
Gorin, Manuel H., and Swerdloff.
Harrington, George A.
Hartough, Howard D., Kosak, and Reid.
Reiff, Orland M., and Hartough.
Wilson, Robert C., Jr.

Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Stabilized indene and alkyl indene resins. 2,462,684, Feb. 22.

Solar Aircraft Company, assignee: *See*—
Pitt, Paul A.

Solar Corporation, assignee: *See*—
Welby, Alfred C.

Spangenberg, Alfred L., assignor to Halfco, Inc., Los Angeles, Calif. Making self-aligning ball bearings. 2,461,138, Feb. 22.

Spar-Holl Manufacturing Company, assignee: *See*—
Sparkes, Harry P.

Sparkes, Harry P., West Orange, N. J., assignor to Spar-Holl Manufacturing Company, Glassport, Pa. Thermally equalised cylinder construction. 2,462,139, Feb. 22.

Sparks, Bayard P., St. James, N. Y. Window locking device. 2,462,434, Feb. 22.

Sparks, William J.: *See*—
Young, David W., and Sparks.

Specialty Brass Company, Incorporated, assignee: *See*—
Nasmar, Carl A.

Sperry Corporation, The, assignee: *See*—
Esval, Orland E.
Halpert, Percy, Frische, Bird, and Esval.

Spicer, Herbert C., Takoma Park, Md. Portable battery-powered gamma-ray counting rate meter of high sensitivity. 2,462,140, Feb. 22.

Springfield Safe Deposit and Trust Co., executor: *See*—
Wesson, Victor H.

Sproll, Paul, Long Island City, N. Y. Foldable cot. 2,462,683, Feb. 22.

Stadiman, Roger W., Los Angeles, Calif. Piston construction for internal-combustion engines and sleeve-like piston ring construction therefor. 2,462,567, Feb. 22.

Stahl, Elmer R.: *See*—
Elvin, William J., and Stahl.

Stallard, Ben W., Cincinnati, Ohio. Dice agitator. 2,462,686, Feb. 22.

Standard Oil Development Company, assignee: *See*—
Arundale, Erving.
Eby, Lawrence T., and Mikeska.
Gidley, Philip T.
Munday, John C.
Nelson, Joseph F.
Rehner, John, Jr., and Flory.
Vickers, Herbert H.
Wilcox, Leon J.
Young, David W., and Sparks.

Standard Telephones and Cables Limited, assignee: *See*—
Foulkes, Christopher H.

Sta-Neet Corporation, assignee: *See*—
Mansfield, Warren M.

Stanton, Robert E., Denver, Colo. Apparatus for uninterrupted reproduction of disk phonograph records. 2,462,435, Feb. 22.

Stauffer Chemical Company, assignee: *See*—
Walcott, Raymond H., and Schallis.

Stava, Robert J., University Heights, assignor to Picker X-ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio. Film magazine. 2,462,687, Feb. 22.

Stearns-Roger Manufacturing Company, The, assignee: *See*—
Nelson, Manley R.

Steckel, Abram F., Youngstown, Ohio. Water kite. 2,462,568, Feb. 22.

Steckler, Nat P., New York, N. Y. Pacifier. 2,462,786, Feb. 22.

Steen, Gottfrid W.: *See*—
Machlett, Raymond R., and Steen.

Stein, Fred, Bridgeport, Conn. Cigarette dispensing container and lighter. 2,462,231, Feb. 22.

Stein, Hall & Company, Inc., assignee: *See*—
La Piana, Fred G.

Stein, Joseph M., Irwin, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control means. 2,462,232, Feb. 22.

Steinberg, Robert, Great Neck, N. Y. Glove or the like. 2,462,787, Feb. 22.

Stewart, Robert G., assignor to Curlette, Inc., Los Angeles, Calif. Curling stone. 2,462,436, Feb. 22.

Stoltz, Glenn E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,462,233, Feb. 22.

Stone, Thomas P., Bay City, Mich. Cover holder. 2,462,688, Feb. 22.

Storer, Richard M., Denver, Colo. Fastening device. 2,462,141, Feb. 22.

Streets, Ernest A., Compton, Calif. Insecticide dispensing device. 2,462,689, Feb. 22.

Striegel, Harold L.: *See*—
Gustafsson, Eric, and Striegel.

Stromberg-Carlson Company, assignee: *See*—
Morris, Frank A.

Stryker, Charles R.: *See*—
De Ward, Russell D., Stryker, and Blockman.

Studley, Clarence K., Jr., Berkeley, Calif., assignor to Marchant Calculating Machine Company. Revolutions counter actuator. 2,462,690, Feb. 22.

Stutsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Cold-cathode gas tube with starting electrode. 2,462,142, Feb. 22.

Sudbrink, Harold J., Woodside, Long Island, N. Y. Lighter. 2,462,143, Feb. 22.

Sun Oil Company, assignee: *See*—
Pew, Joseph N., Jr.
Skeen, John E.

Superdraulic Corporation, assignee: *See*—
Hoffer, James F.

Supina, Alfred A., assignee: *See*—
Supina, Leo E.

Supina, Leo E., Westford, assignor of one-half to A. A. Supina, Stafford Springs, Conn. Parachute. 2,462,234, Feb. 22.

Sutton, Donald E., assignor to Hammond Machinery Builders, Inc. Kalamazoo, Mich. Worktable for belt grinders and the like. 2,462,788, Feb. 22.

Sweitz, Henry L., assignee: *See*—
Beymer, Marshall.

Swenton, John A., Bristol, Conn. Magnetic ball transfer. 2,462,235, Feb. 22.

Swerdloff, Will: *See*—
Gorin, Manuel H., and Swerdloff.

Swift & Company, assignee: *See*—
Mitchell, Harold S., Kay, Hartanov, and Ramsbottom.

Szikiai, George C., Princeton, N. J., assignor to Radio Corporation of America. Television receiving tube with storage properties. 2,462,569, Feb. 22.

Tallaksen, Olaf, Chicago, Ill. Artificial fish bait. 2,462,437, Feb. 22.

Tate, William G., assignee: *See*—
Popplewell, Ranville A.

Taylor-Ball Developments Limited, assignee: *See*—
Ball, Edgar D.

Terry, Bennett F., Stamford, Conn. Forming printing plates. 2,462,570, Feb. 22.

Texas Company, The, assignee: *See*—
Crumrine, Kenneth C.

Theillaumas, Clément M., Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y. Pulse receiving and repeating system. 2,462,144, Feb. 22.

Thermal Liquids, Inc., assignee: *See*—
Oaks, Orlon O.

Thomas & Betts Co., The, assignee: *See*—
Thomas, George C., Jr., and Badeau.

Thomas, Charles L., Western Springs, assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of silica hydrogel and catalysts. 2,462,236, Feb. 22.

Thomas, Donald, Detroit, assignor to Clinton Machine Company, Clinton, Mich. Tap extractor. 2,462,438, Feb. 22.

Thomas, Frank B., assignor to Creed and Company, Limited, Croydon, England. Recording electric signals. 2,462,145, Feb. 22.

Thomas, George C., Jr., Elizabeth, and C. A. Badeau, Westfield, assignors to The Thomas & Betts Co., Elizabeth, N. J., Cable connector. 2,462,818, Feb. 22.

Thomas, Moyer D., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Automatically measuring concentrations of gases. 2,462,293, Feb. 22.

Thompson, Lawrence, Richmond Hill, N. Y. Continuous process camera. 2,462,439, Feb. 22.

Thompson, Leland E., Merchantsville, N. J., assignor to Radio Corporation of America. Automatic frequency control. 2,462,294, Feb. 22.

Thompson, Ralph D., and J. A. Chenicek, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Stabilization of organic compounds. 2,462,237, Feb. 22.

Thompson, Ralph N., Melvindale, Mich., assignor to National Steel Corporation. Apparatus for transferring materials. 2,462,691, Feb. 22.

Thompson, Robert H., and H. Harvey, assignors to L. M. Harvey, Los Angeles, Calif. Magnetic stroke control for cylinder and piston mechanisms. 2,462,571, Feb. 22.

Throdahl, Monte C., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Vulcanizing rubbery butadiene polymers with dixanthic disulfides. 2,462,572, Feb. 22.

Tierney, Thomas W., Watertown, Mass. Candle holder. 2,462,440, Feb. 22.

Tillett, George H.: *See*—
Fleisher, Harry, and Tillett.

Timken-Detroit Axle Company, The, assignee: *See*—
Buckendale, Lawrence R.

Tipton, Elizabeth B., executrix: *See*—
Kotches, Frank K., and Tipton.

Tipton, William D.: *See*—
Kotches, Frank K., and Tipton.

Tomlin, Stanley G.: *See*—
Fremlin, John H., and Tomlin.

Traill, Herbert H., assignor to Fuller Manufacturing Company, Kalamazoo, Mich. Transmission oil filter means. 2,462,819, Feb. 22.

Tremaine, Breckenridge K. assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cleaning composition for rust-stained lacquered surfaces. 2,462,341, Feb. 22.

Trico Products Corporation, assignee: *See*—
Hess, Willis C.
Horton, Erwin C., and Schaal.
Rappl, Anton.

Tripp, Leonard W.: *See*—
Johnson, Philip H., and Tripp.

Trogner, Arthur M., East Stroudsburg, Pa., assignor to Line Material Company, Milwaukee, Wis. Operating mechanism for electrical switches. 2,462,342, Feb. 22.

Trollen, Martin E., assignor to Brown & Bigelow, St. Paul, Minn. Two-piece plastic loose-leaf memorandum sheet holder. 2,462,789, Feb. 22.

Truby, Harry A., Jr.: *See*—
Bludworth, Joseph E., Robeson, and Truby.

Turbo Engineering Corporation, assignee: *See*—
Heinz, Winfield B., Kittredge, and Williams.

Turrettini, Fernand, Bellevue-Geneva, assignor to Societe Genevoise D'Instruments de Physique, Geneva, Switzerland. Precision machine tool. 2,462,573, Feb. 22.

Uhlig, Erich J., Haddon Heights, N. J., assignor to Radio Corporation of America. Electrical servo system. 2,462,238, Feb. 22.

Under Water Welders & Repairers Limited, assignee: *See*—
Boot, Robert H. F.

Union Switch & Signal Company, The, assignee: *See*—
Allison, Leslie R.

Union Trust Company of Pittsburgh, The, administrator: *See*—
Craig, John R.

United Aircraft Corporation, assignee: *See*—
Zimmerman, Charles H., and Rapuano.

United Aircraft Products, Inc., assignee: *See*—
Parker, Wardle L.

United-Carr Fastener Corporation, assignee: *See*—
Buckley, Clyde D.

United Chromium, Incorporated, assignee: *See*—
Dubpernell, George.

United Electronics Company, assignee: *See*—
Reitner, Leopold.

United Gas Improvement Company, The, assignee: *See*—
Batchelder, Howard R.
Soday, Frank J.

United Wood Heel Company, assignee: *See*—
Quirk, Justin P., and Harber.

United States Gasket Company, assignee: *See*—
Nardin, William T.

United States Radium Corporation, assignee: *See*—
Wallhausen, Clarence W., and Dooley.

Universal Oil Products Company, assignee: *See*—
Hulsberg, William E.
Thomas, Charles L.
Thompson, Ralph B., and Chenicek.

Universal Wire Spring Company, The, assignee: *See*—
Neely, William H., and Blumensaadt.

Utica Drop Forge & Tool Corporation, assignee: *See*—
Darmara, Falih N.

Van Dinter, George L., Pomona, Calif., and W. E. Austin, assignors to Mishawaka Rubber & Woolen Manufacturing Company, Mishawaka, Ind. Boot form. 2,462,280, Feb. 22.

Van Ryan, Anthony: *See*—
Kyle, William D., Jr., and Van Ryan.

Van Vliet, Paul D., and B. J. Homkes, Galesburg, assignors to Liquid Carbonic Corporation, Chicago, Ill. Two-temperature refrigerator system. 2,462,240, Feb. 22.

Van Voorhis, William G., assignor to The Jaeger Machine Company, Columbus, Ohio. Bucket structure for excavators and loaders. 2,462,790, Feb. 22.

Vapor Heating Corporation, assignee: *See*—
Lehane, Timothy J., and Burgess.

Verkitus, Anna, assignee: *See*—
Schiller, Morris.

Vickers, Herbert H., Union, N. J., assignor to Standard Oil Development Company. Tearing and dividing equipment. 2,462,692, Feb. 22.

Victor Chemical Works, assignee: *See*—
Adler, Howard.
Knox, William H., Jr., Cochran, Crudup, and Miller.

Victoreen, John A., Cleveland, Ohio. Vacuum tube with filamentary cathode. 2,462,441, Feb. 22.

Von Mehren, Oswald, Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,462,791, Feb. 22.

Wabshaw, Benjamin A., Des Moines, Iowa. Shipping box. 2,462,693, Feb. 22.

Wadsworth, Francis T., Texas City, and R. J. Lee, La Marque, Tex., assignors to Pan American Refining Corporation, New York, N. Y. Alkylation process. 2,462,792, Feb. 22.

Wakefield, Walter H.: *See*—
Manoog, John C., and Wakefield.

Walcott, Raymond H., Cranford, and A. Schallis, Jersey City, N. J., assignors to Stauffer Chemical Company. Stabilization of insoluble sulfur. 2,462,146, Feb. 22.

Walker, Kenneth E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Nonflammable hydraulic fluid. 2,462,694, Feb. 22.

Walker, Uel T., Hollywood, Fla. Pipe coupling. 2,462,575, Feb. 22.

Walker, Uel T., Hollywood, Fla. Whirling toy. 2,462,576, Feb. 22.

Wallace, Charles F., Westfield, assignor to Wallace & Tiernan Products, Inc., Belleville, N. J. Static elimination in manometers. 2,462,820, Feb. 22.

Wallace, Daisy T., administratrix: *See*—
Wallace, Edward E.

Wallace, Edward E., deceased, Cleveland Heights, Ohio; D. T. Wallace, administratrix. Joint for shafts. 2,462,574, Feb. 22.

Wallace, Raymond C., East Providence, R. I. Branch holder. 2,462,442, Feb. 22.

Wallace & Tiernan Products, Inc., assignee: *See*—
Wallace, Charles F.

Waller, William T., Philadelphia, Pa. Spot facing jig. 2,462,147, Feb. 22.

Wallhausen, Clarence W., and H. H. Dooley, Morristown, N. J., assignors to United States Radium Corporation, New York, N. Y. Radioactive metal products and making same. 2,462,241, Feb. 22.

Walter, William H., Chicago, Ill. Apparatus for centrifugal castings. 2,462,794, Feb. 22.

War, the United States of America as represented by the Secretary of, assignee: *See*—
Beeman, Donald R.
Garand, J. C.
Hickman, Clarence N.
Lochhead, John L.
Moore, Cyrril A.
Skinner, Leslie A.

Warburton, Frank D., Southgate, Calif. Carburetor. 2,462,695, Feb. 22.

Warburton, Frank D., South Gate, Calif. Carburetor. 2,462,696, Feb. 22.

Ward, George L., Northwood, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electric soldering apparatus. 2,462,148, Feb. 22.

Ward, Roland: *See*—
Pitha, John J., and Ward.

Warner, Douglas K., Sarasota, Fla. Power lift plane. 2,462,578, Feb. 22.

Warner, Lester W., Miami, Fla. Mattress. 2,462,579, Feb. 22.

Warren, James P., Freeport, Tex. Wind-pressure gauge. 2,462,577, Feb. 22.

Watson, Cyril D., Farnborough, England. Hydraulic valve and hydraulic power device embodying such valves. 2,462,580, Feb. 22.

Watson-Stillman Co., The, assignee: *See*—
Dinzl, Richard W.

Watson, Thomas E., Tewksbury, assignor to Heinze Electric Company, Lowell, Mass. Warp guide. 2,462,581, Feb. 22.

Weaver, Wrex A., assignee: *See*—
Welch, Charles H.

Webb, Herbert J.: *See*—
Webb, Josephine R. and H. J.

Webb, John K., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Treatment of cable insulated with thermoplastic material. 2,462,149, Feb. 22.

Webb, Josephine R. and H. J., Forest Hills, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,462,796, Feb. 22.

Webb, Paul R., and J. R. Koster, Boulder City, Nev.

Whitman, Gerald M., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Catalytic production of oxo-carbonyl compounds. 2,462,448, Feb. 22.

Young, John E., Merchantville, and W. E. McCown, Gloucester, N. J., assignors to Radio Corporation of America. Control circuits. 2,462,799, Feb. 22.

Young, Thomas J., and H. N., and J. B. Rambo, Meridian, Idaho. Combination sweep rake and stacker.

Ziegler, Eugene B., Spencerport, assignor to Ritter Company, Inc., Rochester, N. Y. Electric motor control system. 2,462,349, Feb. 22.

Zimmerman, Charles H., Nichols, and H. J. Rapuano, Milford, assignors to United Aircraft Corporation, East Hartford, Conn. Single or multiengined drive for plural

Webb, Josephine R. and H. J., Forest Hills, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,462,795, Feb. 22.

Webb, Paul S., and J. R. Koster, Boulder City, Nev. Silicone surfaced cooking implement. 2,462,242, Feb. 22.

Wedgworth, John K., York, Ala. Rail fastening means for wood ties. 2,462,582, Feb. 22.

Wehner, Robert S., Port Jefferson, N. Y., assignor to Radio Corporation of America. Transmission line system. 2,462,443, Feb. 22.

Welby, Alfred C., Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis. Teat cup. 2,462,583, Feb. 22.

Weinmayr, Viktor, Pitman, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Thiophene-2-carboxylic acid. 2,462,697, Feb. 22.

Weisglass, Louis L.: *See*—
Simmon, Alfred, and Weisglass.

Weiss, Hugo, London, England. Airtight lid for containers. 2,462,445, Feb. 22.

Weiss, John M., New York, N. Y. Production of maleic anhydride from maleic acid. 2,462,444, Feb. 22.

Welch, Charles H., assignor of twenty-five per cent to W. A. Weaver, Flint, Mich. Nonskid device for automobiles. 2,462,584, Feb. 22.

Wellborn, Starnes R., Nashville, Tenn. Built-in circuitous smoke passage. 2,462,446, Feb. 22.

Wellborn, Starnes R., Nashville, Tenn. Silk-screen printing apparatus. 2,462,447, Feb. 22.

Wellman, S. K., Company, The, assignee: *See*—
Wellman, Samuel K.

Wellman, Samuel K., Cleveland Heights, assignor to The S. K. Wellman Company, Cleveland, Ohio. Making composite articles. 2,462,821, Feb. 22.

Wesson, Eleanor M., assignee: *See*—
Wesson, Victor H.

Wesson, Victor H., deceased, Palmer, by Springfield Safe Deposit and Trust Company, executor, Springfield, assignor to E. M. Wesson, Palmer, Mass. Sear mechanism. 2,462,585, Feb. 22.

Western Electric Company, Incorporated, assignee: *See*—
Bouget, Yves A.
Grosselfinger, Walter H.
Lerch, Brooke W.

Western States Machine Company, The, assignee: *See*—
Hertrich, Joseph.

Western Union Telegraph Company, The, assignee: *See*—
Grimes, Edgar S.
Light, George G., and Hanford.

Westinghouse Air Brake Company, The, assignee: *See*—
Bent, Arthur J.

Winkler, Frederic C., and Wyman.
Wise, Ernest G.

Weston Electrical Instrument Corporation, assignee: *See*—
Woodward, Horace L., Jr.

Weyerhaeuser Timber Company, assignee: *See*—
Booty, Raymond G.

Wheaton Brass Works, assignee: *See*—
Krone, Howard C., and Meyer.

Wheeler, Harold A., Alwood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Regulator. 2,462,796, Feb. 22.

White, William R.: *See*—
Bowen, William J., and White.

Whitman, Gerald M., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Catalytic production of oxo-carbonyl compounds. 2,462,448, Feb. 22.

Whitman, Nelson: *See*—
Detrick, Stanley R., Lockwood, and Whitman.

Whittaker, Charles C., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gas-cleaning means. 2,462,797, Feb. 22.

Whittingham, David J., Watertown, N. Y., assignor to The New York Air Brake Company. Seal for resisting high pressures. 2,462,586, Feb. 22.

Wilbur, Donald A., Troy, N. Y., assignor to General Electric Company. Electrical discharge device. 2,462,698, Feb. 22.

Wilcox, Albert R., Washington, D. C. Jet propelled helicopter rotor. 2,462,587, Feb. 22.

Wilcox, Leon J., Westfield, N. J., assignor to Standard Oil Development Company. Fabrication of conduits for corrosive fluids. 2,462,699, Feb. 22.

Wilkinson, Walter G., Woodlawn, assignor to The Glenn L. Martin Company, Middle River, Md. Apparatus for making axonometric drawings. 2,462,150, Feb. 22.

Williams, John G.: *See*—
Heins, Winfield B., Kittridge, and Williams.

Williams, Roger J., Corvallis, Oreg., assignor to Research Corporation, New York, N. Y. Preparation of growth promoting substances. 2,462,449, Feb. 22.

Wilson, John H., Bay Shore, N. Y. Scoop and siphon for water-cooling systems. 2,462,450, Feb. 22.

Wilson, Robert C., Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Manufacture of desiccants. 2,462,798, Feb. 22.

Winkler, Frederic C., and B. A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Luminaire. 2,462,243, Feb. 22.

Winkquist, Sven G., Goteborg, Sweden. Universal joint. 2,462,700, Feb. 22.

Winnen, Franklyn E.: *See*—
Benjamin, Milton L., and Winnen.

Winther, Martin P., assignee, trustee: *See*—
Winther, Martin P.

Winther, Martin P., Waukegan, Ill., assignor to M. P. Winther, as trustee. Dynamoelectric machine. 2,462,451, Feb. 22.

Wirth, Rand, Oakland, Calif. Power shear and sprayer. 2,462,701, Feb. 22.

Wise, Ernest G., Chicago, Ill., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,462,244, Feb. 22.

Wittenberg, Margaret H., Millburn, N. J., assignor to Jantzen Knitting Mills, New York, N. Y. Brassiere. 2,462,295, Feb. 22.

Wohlgemuth, Adolph J., Brooklyn, N. Y. Remote-control system. 2,462,343, Feb. 22.

Woll, Richard F.: *See*—
Hathaway, Clarence B., and Woll.

Wollman, Wolf B.: *See*—

Wondra, Edward J., Mayville, Wis. Grain blower drive mechanism. 2,462,588, Feb. 22.

Wood, Frank, Elmhurst, Ill., assignor to Zenith Radio Corporation. Variable inductance. 2,462,822, Feb. 22.

Woodward, David W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photographic elements having hydrophilic polyvinyl acetal colloid sublayers. 2,462,151, Feb. 22.

Woodward, Horace L., Jr., Arlington, Va., assignor to Weston Electrical Instrument Corporation, Newark, N. J. Photoelectric cell color temperature measuring device. 2,462,823, Feb. 22.

Woodworth, N. A., Company, assignee: *See*—
Hohwart, George and E. F.

Wooten, Leland A., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Space discharge device. 2,462,245, Feb. 22.

Worthington, Wayne H., and E. F. Jirsa, Waterloo, Iowa, assignors to Deere Manufacturing Co. Hydraulic power lift mechanism. 2,462,246, Feb. 22.

Wright, Stewart E., Cincinnati, Ohio. Electrical snap-on wire connector. 2,462,247, Feb. 22.

Wyman, Burton A.: *See*—
Winkler, Frederic C., and Wyman.

Yale & Towne Manufacturing Company, The, assignee: *See*—
Feldmann, Henry J.

Yates, Herbert, Kingsbury, London, England. Bench frames for supporting and rotating long cylindrical vessels during welding. 2,462,702, Feb. 22.

Yates, Lester R., Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind. Variable gain amplifier. 2,462,452, Feb. 22.

Yirava, Charles R., assignor to Benjamin Reel Products, Inc., Cleveland, Ohio. Spring reel. 2,462,296, Feb. 22.

York, Robert, Jr.: *See*—
Davies, Caleb, Jr., and York.

Young, David W., Roselle, and W. J. Sparks, Westfield, N. J., assignors to Standard Oil Development Company. Copolymers of multiolefins with vinyl ethers and method of making same. 2,462,703, Feb. 22.

Young, Harold N.: *See*—
Young, Thomas J. and H. N., and Rambo.

Young, John E., Merchantville, and W. E. McCown, Gloucester, N. J., assignors to Radio Corporation of America. Control circuits. 2,462,799, Feb. 22.

Young, Thomas J. and H. N., and J. B. Rambo, Meridian, Idaho. Combination sweep rake and stacker. 2,462,152, Feb. 22.

Zahanion, Dorene J., assignee: *See*—
Roche, John C.

Zbar, Marcus J., Tampa, Fla. Spear gun. 2,462,248, Feb 22.

Zehring, Frank E., Dayton, Ohio. Divider setting micrometer. 2,462,589, Feb. 22.

Zeiser, Frank: *See*—
Schner, Charles, Jr., and Zeiser.

Zenith Radio Corporation, assignee: *See*—
Wood, Frank.

Ziegler, Eugene R., Spencerport, assignor to Ritter Company, Inc., Rochester, N. Y. Electric motor control system. 2,462,249, Feb. 22.

Zimmerman, Charles H., Nichols, and H. J. Rapuano, Milford, assignors to United Aircraft Corporation, East Hartford, Conn. Single or multiengined drive for plural airscrews. 2,462,824, Feb. 22.

Zimmerman, Charles H., Nichols, and H. J. Rapuano, Milford, assignors to United Aircraft Corporation, East Hartford, Conn. Automatic declutching means for multiengine drives. 2,462,825, Feb. 22.

Zink, John S., Tulsa, Okla. Burner and burner nozzle. 2,462,704, Feb. 22.

Zweicher, Reinhard: *See*—
Keller, Ernst, and Zweidler.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Prevention of foaming in steam generation. L. O. Gunderson. Re. 23,085, Feb. 22.

Variable delivery rotary pump. J. W. F. Holl. Re. 23,086, Feb. 22.

LIST OF PLANT INVENTIONS

Chrysanthemum plant. G. C. Sparre. 825–7, Feb. 22.

Rose plant. H. C. Swim. 828–9, Feb. 22.

LIST OF DESIGN INVENTIONS

Air blower. W. R. Fox. 152,778, Feb. 22.
Alphabet for forming monograms or the like. S. Reynoso. 152,827, Feb. 22.
Amusement machine or the like, Coin operated. E. Mihalek. 152,816–17, Feb. 22.
Ball pen and knife, Combination. J. M. Weiss. 152,847, Feb. 22.
Band for a watch bracelet or similar article, Extensible. H. J. Duester. 152,774–5, Feb. 22.
Book end. H. E. Kelley, Jr. 152,802, Feb. 22.
Boot, Felt. N. I. Scheu. 152,833, Feb. 22.
Bottle. L. G. Nunes. 152,820, Feb. 22.
Box or the like. H. P. McGovern. 152,814, Feb. 22.
Brooch or similar article. L. L. Hess. 152,783, Feb. 22.
Brooch or similar article. M. L. Petit. 152,823–4, Feb. 22.
Brooch or similar article. M. J. Wakeman. 152,845–6, Feb. 22.
Cabinet, Radio phonograph. L. G. Stone. 152,839–40, Feb. 22.
Carton. J. Binder. 152,765, Feb. 22.
Chair. J. R. Staudt and R. E. Goddard. 152,837, Feb. 22.
Clock. B. Lerman. 152,808, Feb. 22.
Compass, Beam. A. F. Stephen. 152,838, Feb. 22.
Container, Combined hair curler and bobby pin. M. Wajdik. 152,844, Feb. 22.
Container, Deodorant. A. J. Kangas. 152,787, Feb. 22.
Container, Note-pad. A. Kaser. 152,788, Feb. 22.
Dish or the like. J. G. Saba. 152,831, Feb. 22.
Dispenser, Beverage. S. V. Dawson. 152,772, Feb. 22.
Dispenser, Coin. F. A. Wetherill and W. P. Staniszewski. 152,848, Feb. 22.
Display fixture. C. L. Dwinell. 152,777, Feb. 22.
Display sign, Advertising. C. L. Dwinell. 152,776, Feb. 22.
Doll. B. Wagner. 152,842, Feb. 22.
Finding for jewelry. A. Kats. 152,801, Feb. 22.
Fire extinguisher or similar article, Portable. D. Mapes. 152,812, Feb. 22.
Fireplace for outdoor use. Multiple. W. V. Maselli. 152,813, Feb. 22.
Frame, Vehicle. R. A. Noble and W. I. Youngs. 152,819, Feb. 22.
Gas valve unit or similar article, Thermostatic control. M. J. Caparone. 152,769, Feb. 22.
Grater and receptacle, Combined. C. J. Bassett. 152,764, Feb. 22.
Handle, Drawer. A. S. Rummelsburg. 152,829, Feb. 22.
Hat. H. H. Stahl. 152,836, Feb. 22.
Heater, Electric air. F. W. Thompson and R. M. Davies. 152,841, Feb. 22.
High chair, Baby's. D. I. Scharaga. 152,832, Feb. 22.
Holder, Floodlight. W. H. Klein. 152,806, Feb. 22.
Holder or similar article, Glass candle. H. King. 152,804–5, Feb. 22.
Iron, Electric steam. R. I. Huffman. 152,786, Feb. 22.
Ironer, Portable. J. J. Getgey. 152,780, Feb. 22.
Ironing machine, Portable. A. L. Briggs. 152,768, Feb. 22.
Lens, Fog. B. L. Latousek. 152,807, Feb. 22.
Mop head and handle socket, Combination. F. Wagner. 152,843, Feb. 22.
Necklace or similar article. A. Katz. 152,789–800, Feb. 22.
Necktie. N. Keramaris. 152,803, Feb. 22.
Packing material for fragible articles. E. L. Shepard. 152,834, Feb. 22.
Pajama suit or similar article. H. A. Russian. 152,830, Feb. 22.
Regulator, Pressure control. W. J. MacCauley. 152,809, Feb. 22.
Sanding machine. K. C. Atkin. 152,763, Feb. 22.
Scale, Weighing. L. Maguire. 152,810–11, Feb. 22.
Slat, Venetian blind. H. Nelson. 152,818, Feb. 22.
Stand for pitcher and drinking glass set. S. Raysik. 152,826, Feb. 22.
Store front. B. L. Snyder. 152,835, Feb. 22.
Suit. S. Cohen. 152,770, Feb. 22.
Switch, Pushbutton. L. V. A. Guild. 152,782, Feb. 22.
Table and foldable benches, Combination. J. C. Higgins. 152,784, Feb. 22.
Target, Ring-toss game. J. R. O'Neil. 152,821, Feb. 22.
Telephone dialing implement. H. F. Cutler. 152,771, Feb. 22.
Telescope, Binocular. B. D. Ritbols. 152,828, Feb. 22.
Tie clasp. A. Gesten. 152,779, Feb. 22.
Tie clasp or similar article. C. Birnbaum. 152,766, Feb. 22.
Tool, Multiple. E. B. Overshiner. 152,822, Feb. 22.
Tool, Tire expanding. G. E. Gier. 152,781, Feb. 22.
Toy soda fountain. S. P. Midonhas. 152,815, Feb. 22.
Toy vehicle. T. K. Hillard. 152,785, Feb. 22.
Toy water gun. W. E. Braham. 152,767, Feb. 22.
Urn, Coffee. T. C. Donaldson. 152,773, Feb. 22.
Vessel, Cooking. K. B. Porter. 152,825, Feb. 22.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetarylamides, Production of. E. S. Pemberton. 2,462,221, Feb. 22.
Acid esters, Preparation of unsaturated. L. Shechter. 2,462,337, Feb. 22.
Adaptor, Seal. F. E. Payne. 2,462,280, Feb. 22.
Adding device. M. Sieradzki. 2,462,338, Feb. 22.
Agitator, Dice. B. W. Stallard. 2,462,686, Feb. 22.
Air and land conveyance, Convertible. H. D. and H. J. Boggs. 2,462,462, Feb. 22.
Airplane propulsion, Electrical. L. A. Kilgore, F. W. Godsey, Jr., B. A. Rose, and F. B. Powers. 2,462,201, Feb. 22.
Aldehyde-(phenol-phenol ether reaction products) reaction products and producing them. M. T. Harvey. 2,462,636, Feb. 22.
Alkylation and catalyst recovery. R. J. Lee. 2,462,793, Feb. 22.
Alkylation process. F. T. Wadsworth and R. J. Lee. 2,462,792, Feb. 22.
Alloy. E. L. Olcott. 2,462,665, Feb. 22.
Alloys, Hard. E. B. McCauley. 2,462,056, Feb. 22.
Allyl alcohol, Electrolytic production of. J. E. Bludworth, M. O. Robeson, and H. A. Truby, Jr. 2,462,301, Feb. 22.
Alpha, alpha'-thiodialiphatic acids, Making. M. P. Kleinholz. 2,462,200, Feb. 22.
Alpha-keto-dihydronaphthalene, Preparation of. R. Johnson. 2,462,103, Feb. 22.
Amides of acetoacetic acid and their preparation. J. R. Caldwell. 2,462,358, Feb. 22.
Amino acid separation. R. J. Block. 2,462,597, Feb. 22.
Amino acids, Manufacture of. C. Neuberg and H. Lustig. 2,462,124, Feb. 22.
Ammunition making machinery. A. F. Gagne, Jr. 2,462,315, Feb. 22.
Amplifier for small direct currents. J. A. Hipple, Jr., and D. J. Grove. 2,462,190, Feb. 22.
Amplifier, Variable gain. L. R. Yates. 2,462,452, Feb. 22.
Amplitude control. D. S. Renner. 2,462,551, Feb. 22.
Anchor, Single flange rail. F. A. Preston. 2,462,548, Feb. 22.
Angle drill. C. A. Koza. 2,462,647, Feb. 22.
Animal feed. M. F. Gribbins. 2,462,633, Feb. 22.
Anode bar jack. C. J. Klein. 2,462,506, Feb. 22.
Antenna construction. J. W. Shur. 2,462,229, Feb. 22.
Anticut nonstrip-out handle. D. A. Davis. 2,462,168, Feb. 22.
Apparatus for centrifugal castings. W. H. Walter. 2,462,794, Feb. 22.
Apparatus for drying hair. E. R. Elder. 2,462,079, Feb. 22.
Apparatus for filling containers of pressure fluids. E. W. Jacobson, H. O. Creazzi, and J. R. Aikins. 2,462,642, Feb. 22.
Apparatus for forming felt. I. Griffith and A. P. Huchberger. 2,462,487, Feb. 22.
Apparatus for forming glass tubing, rods and the like. E. Danner. 2,462,805, Feb. 22.
Apparatus for making axonometric drawings. W. G. Wilkinson. 2,462,150, Feb. 22.
Apparatus for painting gas holders. L. B. Donovan. 2,462,368, Feb. 22.
Apparatus for receiving frequency-modulated waves. C. T. McCoy. 2,462,759, Feb. 22.
Apparatus for refining zinciferous lead. W. W. Shropshire. 2,462,783, Feb. 22.
Apparatus for saturating fabrics. F. W. Adams. 2,462,297, Feb. 22.
Apparatus for shaping containers. G. C. Erb. 2,462,080, Feb. 22.
Apparatus for sonic pulverization and dispersion of materials. T. Robinson. 2,462,554, Feb. 22.
Apparatus for stretching elastic covers. V. H. Hasselquist. 2,462,318, Feb. 22.
Apparatus for the control of cooling systems. T. J. Lehane and E. H. Burgess. 2,462,514, Feb. 22.
Apparatus for the manufacture of tubular glassware. E. Danner. 2,462,807, Feb. 22.
Apparatus for transferring material. R. N. Thompson. 2,462,691, Feb. 22.
Apparatus for turning wood heels. J. P. and L. G. P. Quirk. 2,462,673, Feb. 22.
Apparatus for uninterrupted reproduction of disk phonograph records. R. E. Stanton. 2,462,435, Feb. 22.
Appliance, Cabinet culinary. M. H. Frisbie. 2,462,080, Feb. 22.
Appliance for stretching gloves or the like. G. Givoni. 2,462,632, Feb. 22.
Aqueous emulsions of polyethylene, Preparing. J. Harmon. 2,462,390, Feb. 22.
Armature shaft winding cap. J. M. England. 2,462,621, Feb. 22.
Aromatic hydrocarbons, Treatment of. H. D. Hartough, A. I. Kosak, and E. E. Reid. 2,462,391, Feb. 22.
Aromatic polyfluoro four-carbon atom ring compounds. P. L. Barrick. 2,462,346, Feb. 22.
Article holder. B. R. Flaherty. 2,462,375, Feb. 22.
Article supporting rack. M. S. Schneider. 2,462,431, Feb. 22.
Articles of manufacture, Producing. J. Boyd and R. A. Bice. 2,462,158, Feb. 22.
Articulated railway vehicle. A. G. Omar. 2,462,666, Feb. 22.
Aryl aso sulfonic acid salts of streptothricin and streptomycin. K. Folkers. 2,462,175, Feb. 22.
Aryl trichlorothio acetates in elastomer treatment. A. T. Hallowell. 2,462,742, Feb. 22.
Ascorbic acids, Preparing. H. H. Bassford, Jr., W. S. Harmon, and J. F. Mahoney. 2,462,251, Feb. 22.
Assembly device for spelling blocks. A. I. Horwitz. 2,462,502, Feb. 22.
Assembly unit, Multiple shielded. E. C. Hallett. 2,462,489, Feb. 22.
Atomizer, Portable. R. C. Seyforth. 2,462,563, Feb. 22.
Attenuator control, Initial. D. S. Renner. 2,462,552, Feb. 22.
Automatic drill press. J. E. Mills. 2,462,327, Feb. 22.
Bag and inflatable pillow, Combined. W. Z. Norman and J. Billig. 2,462,215, Feb. 22.
Bait casting and trolling lure. E. H. Parnell, Sr. 2,462,828, Feb. 22.
Baker's peel. L. Porther. 2,462,672, Feb. 22.
Balance, Hydraulic. L. J. Nowak, Jr. 2,462,216, Feb. 22.
Ball bearings, Making self-aligning. A. L. Spangenberg. 2,462,138, Feb. 22.
Ball transfer, Magnetic. J. A. Swenton. 2,462,235, Feb. 22.
Band, Matrix. H. L. Call. 2,462,356, Feb. 22.
Baptismal apparatus. P. H. Garrett. 2,462,627, Feb. 22.
Battery cable clamp. J. C. Moore. 2,462,660, Feb. 22.
Battery-powered gamma-ray counting rate meter of high sensitivity, Portable. H. C. Spicer. 2,462,140, Feb. 22.
Beacon light. W. A. Pennow. 2,462,222, Feb. 22.
Bearing: *See*—
Hermetically sealed, self-lubricating slide bearing.
Bed sheet construction. B. Berman. 2,462,156, Feb. 22.
Bedstead. M. Mattedi. 2,462,524, Feb. 22.
Bell, Cycle. M. Brun. 2,462,718, Feb. 22.
β-lactones, Preparation of. J. R. Caldwell and H. J. Hagemeyer, Jr. 2,462,357, Feb. 22.
Bicycle knee action, Front wheel. W. W. Barnett. 2,462,711, Feb. 22.
Bicycle, Stabilizable. H. N. Pedersen. 2,462,789, Feb. 22.
Blouse with variable neckline effect. F. Alberich. 2,462,706, Feb. 22.
Bomb band assembly. W. C. Hasselhorn. 2,462,744, Feb. 22.
Boot form. G. L. Van Dinter and W. E. Austin. 2,462,239, Feb. 22.
Box: *See*—
Shipping box.
Bracing device, Freight. W. F. Eisensmith. 2,462,619, Feb. 22.
Bracket: *See*—
Tractor hitch bracket.
Window shade bracket.
Braiding, Method of and apparatus for. B. W. Lerch. 2,462,515, Feb. 22.
Brake: *See*—
One-way expansible band brake.
Brake flap, Air resistant. C. A. Bigelow. 2,462,459, Feb. 22.
Branch holder. R. C. Wallace. 2,462,442, Feb. 22.
Brassière. M. H. Wittenberg. 2,462,295, Feb. 22.
Bridge arrangement, Self-balancing. A. D. Blumlein, W. H. Connell, and D. G. Holloway. 2,462,599, Feb. 22.
Brush. R. S. Herwig. 2,462,055, Feb. 22.
Bucket structure for excavators and loaders. W. G. Van Voorhis. 2,462,790, Feb. 22.
Buckle, Bale tie. J. Hess. 2,462,264, Feb. 22.
Building construction. J. S. Nagel. 2,462,415, Feb. 22.
Building material and its manufacture, Thermal insulating. J. S. Nagel. 2,462,538, Feb. 22.
Burner and burner nozzle. J. S. Zink. 2,462,704, Feb. 22.
Burner of the tray type, Horizontal oil. C. A. Miller. 2,462,529, Feb. 22.

Button. J. Neumann. 2,462,332, Feb. 22.
Button fastener. M. F. Brown, Jr. 2,462,717, Feb. 22.
Cabinet: *See*—
Dispensing cabinet.
Cabinet with refrigerating removable unit, Freezing. H. F. Luecke. 2,462,115, Feb. 22.
Cable: *See*—
Electric cable.
Cable connector. G. C. Thomas, Jr., and C. A. Badeau. 2,462,815, Feb. 22.
Cable insulated with thermoplastic material, Treatment of. J. K. Webb. 2,462,149, Feb. 22.
Cage, Valve. C. E. Bridwell. 2,462,606, Feb. 22.
Calendar with interlaced spiral formations, Rotatable disk, perpetual. R Blodget. 2,462,598, Feb. 22.
Camber adjusting tool. H. V. Jungst. 2,462,403, Feb. 22.
Camera, Continuous process. L. Thompson. 2,462,439, Feb. 22.
Can-marking device. J. Albertoll. 2,462,590, Feb. 22.
Candle holder. T. W. Tierney. 2,462,440, Feb. 22.
Cap: *See*—
Armature shaft winding cap.
Cap. M. A. Dannenberg. 2,462,258, Feb. 22.
Capacitor, High-frequency. C. V. Fields. 2,462,173, Feb. 22.
Carburetor. F. D. Warburton. 2,462,695–6, Feb. 22.
Carrier: *See*—
Folding clothesbasket carrier.
Carton, Bottle. M. A. Riley and D. C. McClelland. 2,462,676, Feb. 22.
Carton closing machine. J. W. Binsack. 2,462,460, Feb. 22.
Case: *See*—
Key case.
Casting, forging, and heat-treating cast iron grinding balls. M. R. Nelson. 2,462,122, Feb. 22.
Catalyst regenerator and recovery apparatus. W. E. Hulsberg. 2,462,193, Feb. 22.
Catalysts for polymerising olefins. M. J. Roedel. 2,462,678, Feb. 22.
Catalytic production of oxo-carbonyl compounds. G. M. Whitman. 2,462,448, Feb. 22.
Cellulose derivative combined with n-alkoxymethyl polyamide. R. L. Brown. 2,462,159, Feb. 22.
Centrifugal machine, Continuous. J. Hertrich. 2,462,098, Feb. 22.
Chain: *See*—
Nonskid tire chain.
Chair: *See*—
Modernistic spring metal Spring oscillating chair.
folding chair.
Chair for infants, Convertible. R. F. Reiman. 2,462,675, Feb. 22.
Cherry stemming and sorting machines. H. M. Schubert. 2,462,682, Feb. 22.
Chlorstone, Manufacture of. G. A. Harrington. 2,462,369, Feb. 22.
Chlorine dioxide and nitrogen trichloride, Simultaneous production of. W. S. Hutchinson. 2,462,194, Feb. 22.
Chromium plating and treating steel airplane propeller blades. G. Dubpernell. 2,462,615, Feb. 22.
Chuck. M. L. Benjamin and F. E. Winnen. 2,462,155, Feb. 22.
Chuck. K. Rauch. 2,462,284, Feb. 22.
Chuck, Diaphragm. G. and E. F. Hohwart. 2,462,501, Feb. 22.
Chuck for lathes and the like machine tools. S. L. Casella. 2,462,465, Feb. 22.
Cigarette holder. H. C. Newcom. 2,462,333, Feb. 22.
Cigarette or tobacco package and ash tray, Combined. T. J. Bryan. 2,462,160, Feb. 22.
Circuit breaker. W. D. Kyle, Jr., and A. Van Ryan. 2,462,753, Feb. 22.
Circuit breaker. E. G. Wise. 2,462,244, Feb. 22.
Circuit for electric discharge devices, Starting and operating. W. F. Hodge. 2,462,320, Feb. 22.
Circuit interrupter. B. P. Baker and W. M. Leeds. 2,462,708, Feb. 22.
Circuit interrupter. J. M. Cumming. 2,462,724, Feb. 22.
Circuit interrupter. G. J. Easley. 2,462,733, Feb. 22.
Circuit interrupter. O. von Mehren. 2,462,791, Feb. 22.
Circuit interrupter. J. R. and H. J. Webb. 2,462,795, Feb. 22.
Circuits for electric discharge devices, Starting and operating. R. V. Mills, M. G. Clarke, and H. R. Ruff. 2,462,328, Feb. 22.
Circuits for generating electric impulses. F. H. Bray and F. E Newton. 2,462,066, Feb. 22.
Circuits, Rate. P. Halpert, C. A. Frische, J. L. Bird, and O. E. Esval. 2,462,095, Feb. 22.
Clamp: *See*—
Battery cable clamp. Pipe clamp.
Clamp. H. Cohen. 2,462,721, Feb. 22.
Clasp, Tie. J. F. Fontaine. 2,462,483, Feb. 22.
Cleaning composition for rust-stained lacquered surfaces. B. K. Tremaine. 2,462,341, Feb. 22.
Clutch and brake mechanism. J. W. McNairy. 2,462,657, Feb. 22.
Coating apparatus for wires, filaments, and the like. J. K. Delano. 2,462,474, Feb. 22.
Coating compositions. L. D. Gittings and R. H. Fundaburk. 2,462,631, Feb. 22.
Coating of metal articles, Electrophoretic. L. F. Oakes. 2,462,125, Feb. 22.
Coatings for fresh frozen meats, Protective. H. S. Mitchell, L. M. Kay, A. S. Hartanov, and J. M. Ramsbottom. 2,462,760, Feb. 22.
Coatings for metal surfaces, Protective phosphate. G. W. Jernstedt. 2,462,196, Feb. 22.
Coil-winding machine. N. M. Haynes. 2,462,393, Feb. 22.
Collapsible hanger. A. Rosen. 2,462,778, Feb. 22.
Collar and tie holder. R. C. Erdmann. 2,462,311, Feb. 22.
Comb, Hair cutting. W. M. Mansfield. 2,462,519, Feb. 22.
Communication system. J. R. Desch, E. V. Gulden, and R. E. Mumma. 2,462,613, Feb. 22.
Communication system utilizing damped oscillations, High-frequency electrical. W. A. Beatty. 2,462,061, Feb. 22.
Compact, Shoe polish. W. J. Bowen and W. R. White. 2,462,065, Feb. 22.
Compensator control for pumps. J. F. Hoffer. 2,462,500, Feb. 22.
Composite articles, Making. S. K. Wellman. 2,462,821, Feb. 22.
Composition comprising an amide-aldehyde resin and as a plasticiser a polyester of a dihydric ether of propylene glycol and dicarboxylic acid. E. W. Moffett. 2,462,658, Feb. 22.
Compressed wire mesh unit. A. M. Goodloe. 2,462,316, Feb. 22.
Compressor, Air. C. D. MacCracken. 2,462,518, Feb. 22.
Computer, Electronic. G. A. Morton and L. E. Flory. 2,462,275, Feb. 22.
Concentrations of gases, Automatically measuring. M. D. Thomas. 2,462,293, Feb. 22.
Concentric shell hot-air heater. S. J. Heiman. 2,462,395, Feb. 22.
Condensation products of pentaerythrityltetramine with beta-diketones and beta-hydroxy methylene ketones. C. J. Pedersen and F. B. Downing. 2,462,668, Feb. 22.
Condenser. H. E. Byer. 2,462,355, Feb. 22.
Condenser for picture projection units, Light. G. T. Johnson. 2,462,749, Fe. 22.
Condensers or the like for heat exchange apparatus, Producing. N. Kramer. 2,462,511, Feb. 22.
Conduits for corrosive fluids, Fabrication of. L. J. Wilcox. 2,462,699, Feb. 22.
Connecting wires to terminals, Electrically. J. R. Pheasey and R. J. M. Andrews. 2,462,127, Feb. 22.
Connection for electric incandescent lamps, Filament. L. G. Leighton. 2,462,325, Feb. 22.
Connector: *See*—
Cable connector.
Electrical snap-on wire connector.
Connector. L. E. Sauer. 2,462,227, Feb. 22.
Connector assembly for absorption refrigerators, Flue. C. D. Pfender, A. Schultze, and C. J. Knerr. 2,462,671, Feb. 22.
Construction of structural members. D. H. Green. 2,462,395, Feb. 22.
Container and lighter, Cigarette dispensing. F. Stein. 2,462,231, Feb. 22.
Contour-stitching machines, Automatic. S. Schiller. 2,462,559, Feb. 22.
Contraction joint assembly. A. E. Brickman. 2,462,353, Feb. 22.
Control apparatus for periodically energizing gaseous discharge devices. H. A. Engle. 2,462,371, Feb. 22.
Control circuits. J. E. Young and W. E. McCown. 2,462,799, Feb. 22.
Control means. J. M. Stein. 2,462,232, Feb. 22.
Control means for running web, Tension. J. S. Scheuermann and T. N. Carter. 2,462,558, Feb. 22.
Control plate for filter cartridges. E. G. Gunn. 2,462,488, Feb. 22.
Control system. W. B. Heins, A. E. Kittredge, and J. G. Williams. 2,462,097, Feb. 22.
Control system and operation, Electrical. J. W. Peeples. 2,462,546, Feb. 22.
Control system, Antihunt servomotor. A. V. Bedford. 2,462,456, Feb. 22.
Controller for electric motor-driven traveling devices. E. U. Lassen. 2,462,755, Feb. 22.
Conveyer, Seeder. J. A. Mueller. 2,462,276, Feb. 22.
Cooling arrangement for dynamoelectric machines. C. W. Lange. 2,462,649, Feb. 22.
Copolymers of dihydrodicyclopentadienyl methacrylate with esters of methacrylic acid. F. W. Hoover. 2,462,400, Feb. 22.
Copolymers of multiolefins with vinyl ethers and making same. D. W. Young and W. J. Sparks. 2,462,703, Feb. 22.
Copolymers of styrene and 4,4'-divinylbiphenyl. F. Rosenthal. 2,462,555, Feb. 22.
Copolymers of tetra-allyl pentaerythritol. L. T. Smith. 2,462,817, Feb. 22.
Copyholder. E. H. Metcalf. 2,462,273, Feb. 22.
Corer, Apple and pear. C. A. Matle. 2,462,411, Feb. 22.
Corrosion inhibiting process. H. C. Hetherington. 2,462,638, Feb. 22.
Cosmetic blend predetermining device. J. Brodeur. 2,462,606, Feb. 22.
Cot, Finger. W. Meyer. 2,462,208, Feb. 22.
Cot, Foldable. P. Sproll. 2,462,685, Feb. 22.
Cotton picker. L. W. Gant. 2,462,177, Feb. 22.

Coumarone-indene resin stabilized with an alkyl polyhydroxy spiro indane. S. G. Burroughs. 2,462,608, Feb. 22.
Coupling: *See*—
Pipe coupling. Turbine pump type hydraulic coupling.
Release coupling.
Shaft coupling.
Coupling for fluid conducting lines, Valved. H. C. Krone and W. Meyer. 2,462,512, Feb. 22.
Cover: *See*—
Insulating cover.
Cover for open tissue roll holders. R. I. Price. 2,462,776, Feb. 22.
Cover holder. T. P. Stone. 2,462,688, Feb. 22.
Cover lifter. W. W. Guffey, J. P. Mihelic, H. V. Piper, and T. Engvtrom. 2,462,387, Feb. 22.
Crystalline anhydrous monocalcium phosphate, Manufacture of. W. H. Knox, Jr., R. T. Cochran, W. R. Crudup, and W. S. Miller. 2,462,104, Feb. 22.
Cultivator, Field. W. A. Hyland. 2,462,641, Feb. 22.
Cup, Ice-cream. A. A. Heyman. 2,462,497, Feb. 22.
Cup, Teat. A. C. Welby. 2,462,583, Feb. 22.
Curling stone. R. G. Stewart. 2,462,436, Feb. 22.
Cushion, Convertible. A. W. Krempel. 2,462,269, Feb. 22.
Cutter: *See*—
Outside pipe cutter.
Cutting machine and method, Wool. C. E. Galvin. 2,462,090, Feb. 22.
Cyclic polymeric organoaminosilanes. C. P. Haber. 2,462,835, Feb. 22.
Cylinder construction, Thermally equalized. H. P. Sparkes. 2,462,139, Feb. 22.
Declutching means for multi-engine drives, Automatic. C. H. Zimmerman and H. J. Rapuano. 2,462,825, Feb. 22.
Demodulation of time-modulated electrical pulses. M. M. Levy. 2,462,110, Feb. 22.
Demodulator system for time modulated pulses. M. G. Hollabaugh. 2,462,100, Feb. 22.
Desiccants, Manufacture of. R. C. Wilson, Jr. 2,462,798, Feb. 22.
Detector for looms, Electric weft. J. C. Manoog and W. H. Wakefield. 2,462,326, Feb. 22.
Detector, Radiation. K. C. Crumrine. 2,462,471, Feb. 22.
Detergent compositions, Synthetic. J. D. Malkemus. 2,462,758, Feb. 22.
Device for mounting selective multiple pulleys upon an electric motor drive shaft. B. Dowick. 2,462,476, Feb. 22.
Device for treating timber. C. J. Gregory. 2,462,486, Feb. 22.
Diacetyl, Preparation of. T. Kritchevsky. 2,462,107, Feb. 22.
Discharge device and associated circuit, Electron. N. I. Korman. 2,462,510, Feb. 22.
Discharge device and operation, Electric. H. R. Ruff. 2,462,336, Feb. 22.
Discharge device, Electrical. D. A. Wilbur. 2,462,698, Feb. 22.
Discharge device, Electron. H. A. Andresen. 2,462,153, Feb. 22.
Discharge device, Electron. J. H. Fremlin and S. G. Tomlin. 2,462,086, Feb. 22.
Discharge device, Electron. E. W. Herold. 2,462,496, Feb. 22.
Discharge device, Electron. W. V. Smith. 2,462,137, Feb. 22.
Discharge device for electronic multiplication, Electronic. M. Arditi. 2,462,059, Feb. 22.
Discharge device of the velocity modulation type, Electron. J. H. Fremlin. 2,462,087, Feb. 22.
Discharge device, Space. L. A. Wooten. 2,462,245, Feb. 22.
Dispensing cabinet. C. Schner, Jr., and F. Zeiser. 2,462,816, Feb. 22.
Dispensing device, Insecticide. E. A. Stretz. 2,462,689, Feb. 22.
Dispensing mechanism. S. J. Heiman. 2,462,394, Feb. 22.
Display device, Shoe or boot. C. M. Bye. 2,462,611, Feb. 22.
Distance measuring device having photoelectric means, Light interference. R. L. Snyder, Jr. 2,462,292, Feb. 22.
Distributor system, Multichannel pulse. M. M. Levy. 2,462,111, Feb. 22.
Divider, Frequency. C. J. Hirsch. 2,462,265, Feb. 22.
Dl-menthone, Preparation of. A. L. Barney. 2,462,712, Feb. 22.
Doffing mechanism for cotton harvesters. C. B. Berry. 2,462,800, Feb. 22.
Door-cupboard and tray. O. C. Handel. 2,462,743, Feb. 22.
Doorstop. B. E. Fisher. 2,462,174, Feb. 22.
Drafting machine. Charles Henry and Charles Hubbard Little. 2,462,271, Feb. 22.
Drainage apparatus, Automatic. C. O. De Witt. 2,462,614, Feb. 22.
Dress, Maternity. H. E. Reno. 2,462,553, Feb. 22.
Drill: *See*—
Angle drill.
Drive for plural airscrews, Single or multiengined. C. H. Zimmerman and H. J. Rapuano. 2,462,824, Feb. 22.
Drive mechanism, Grain blower. E. J. Wondra. 2,462,588, Feb. 22.
Dual action switch. W. B. Harrison, Jr. 2,462,495, Feb. 22.
Dyeing glass fibers. H. Roesti. 2,462,428, Feb. 22.
Dynamoelectric machine. M. P. Winther. 2,462,451, Feb. 22.
Electrical snap-on wire connector. S. E. Wright. 2,462,247, Feb. 22.
Electric cable. W. T. Peirce. 2,462,770, Feb. 22.
Electric fluid heater. H. C. Inman. 2,462,746, Feb. 22.
Electric switch. A. Rappl. 2,462,777, Feb. 22.
Electrical switch. G. W. Rathert. 2,462,283, Feb. 22.
Electrical switch. N. J. Rees. 2,462,285, Feb. 22.
Electrode, Electric arc cutting. R. H. F. Boot. 2,462,463, Feb. 22.
Electromagnet with plunger. C. T. Evans. 2,462,482, Feb. 22.
Elevated tank. G. T. Horton. 2,462,101, Feb. 22.
Elevator position indicator. J. R. Schoenbaum. 2,462,781, Feb. 22.
Eliminating porosity in crystalline selenium films. W. E. Blackburn. 2,462,157, Feb. 22.
Embalming apparatus. J. H. Eckels. 2,462,617, Feb. 22.
Emulsion of petroleum oil and aqueous solution containing added alkali metal salts of cresols, Separation of an. L. L. Ferguson. 2,462,810, Feb. 22.
Engine: *See*—
Multicylinder engine. Opposed piston engine.
Engine output equalizing apparatus, Multiple. A. G. Larson. 2,462,550, Feb. 22.
Erecting system for gyroscopes. C. L. Norden. 2,462,541, Feb. 22.
Esters, Manufacture of. F. O. Cockerille. 2,462,163, Feb. 22.
Etching method. G. W. Jernstedt. 2,462,197, Feb. 22.
Evaporator having refrigerant recirculation means. H. G. Mojonnier. 2,462,320, Feb. 22.
Explosive device. J. P. Catlin. 2,462,305, Feb. 22.
Extractor, Tap. D. Thomas. 2,462,438, Feb. 22.
Fastener: *See*—
Button fastener. Rail fastener.
Fastening device. R. M. Storer. 2,462,141, Feb. 22.
Fastening means for wood ties, Rail. J. K. Wedgworth. 2,462,582, Feb. 22.
Ferro magnetic variable high-frequency inductors. W. J. Polydoroff. 2,462,423, Feb. 22.
Filing machine, Saw. A. R. Roderick. 2,462,225, Feb. 22.
Film handling apparatus and magazine for use therewith. W. D. Foster. 2,462,083, Feb. 22.
Film holder. M. A. Bilofsky. 2,462,713, Feb. 22.
Film magazine. R. J. Stava. 2,462,687, Feb. 22.
Filter: *See*—
Gasoline filter. Water filter.
Fire escape, Portable. J. E. Forster. 2,462,626, Feb. 22.
Fireproofing compositions. K. S. Campbell and J. E. Sands. 2,462,803, Feb. 22.
Fish bait, Artificial. O. Tallaksen. 2,462,437, Feb. 22.
Fishhook supporting frame. L. E. Sauvey. 2,462,290, Feb. 22.
Fishing reel. F. Crawford. 2,462,365, Feb. 22.
Fitting, Detachable hose. P. F. Hurst. 2,462,323, Feb. 22.
Fitting, Diversion blind. G. A. Duggan. 2,462,731, Feb. 22.
Fitting, Pipe. L. S. Hamer. 2,462,494, Feb. 22.
Fixture, Circular-line fluorescent lighting. H. E. Bohl. 2,462,714, Feb. 22.
Fixture for valves, Leak testing. A. MacLachlan. 2,462,116, Feb. 22.
Flexible joint. F. N. Bard. 2,462,592, Feb. 22.
Fluid pump. C. F. Hautau. 2,462,392, Feb. 22.
Fluid valve. G. J. Koehler. 2,462,646, Feb. 22.
Fluidization process for producing aluminum. J. C. Munday. 2,462,661, Feb. 22.
Fluorinated hydrocarbons. R. M. Joyce, Jr. 2,462,402, Feb. 22.
Folding clothesbasket carrier. W. F. Meyer. 2,462,274, Feb. 22.
Folding machine and method, Box. W. M. Kucklinsky. 2,462,513, Feb. 22.
Folding table. C. H. Roberts. 2,462,677, Feb. 22.
Formaldehyde, Production of. W. B. Meath. 2,462,413, Feb. 22.
Forming printing plates. B. F. Terry. 2,462,570, Feb. 22.

Jack for Diesel engines, Cranking. J. H. Kobbe. 2,462,509, Feb. 22.
Jacket construction. B. F. Cassens. 2,462,361, Feb. 22.
Jar and bottle combined, Vacuum. M. F. Bird. 2,462,461, Feb. 22.
Jewelry and clasp therefor, Article of. I. Pratt and W. B. Wollman. 2,462,425, Feb. 22.
Jig for forming mitered pipe joints. G. Muhlack. 2,462,121, Feb. 22.
Jig, Spot facing. W. T. Waller. 2,462,147, Feb. 22.
Joining and registering device for molding boxes. B. Faure. 2,462,373, Feb. 22.
Joint: *See*—
Flexible joint. Safety joint.
Pipe joint. Universal joint.
Joint for shafts. E. E. Wallace. 2,462,574, Feb. 22.
Key case. A. W. Magee. 2,462,206, Feb. 22.
Kite, Water. A. P. Steckel. 2,462,568, Feb. 22.
Knitting. E. Johnson. 2,462,401, Feb. 22.
Lamp device. J. Schwab. 2,462,562, Feb. 22.
Lampstand with bell, Ornamental. I. Klein. 2,462,750, Feb. 22.
Latch: *See*—
Tire chain latch.
Latching mechanism. J. Pickford. 2,462,282, Feb. 22.
Lathe attachment. T. D. Peat. 2,462,126, Feb. 22.
Lead extrusion. W. K. Freeman. 2,462,313, Feb. 22.
Lid for containers, Airtight. H. Weiss. 2,462,445, Feb. 22.
Lifter: *See*—
Cover lifter.
Lifter for cloth cutting machines, Cloth. M. Green. 2,462,317, Feb. 22.

Light: *See*—
Beacon light.
Light bulb stem and socket. J. B. Miller. 2,462,530, Feb. 22.
Lighter. H. J. Sudbrink. 2,462,148, Feb. 22.
Lighter, Pyrophoric. C. C. Clamp. 2,462,467, Feb. 22.
Liquid treating apparatus. J. R. Craig. 2,462,612, Feb. 22.
Loading device, Litter. H. S. Hamilton. 2,462,096, Feb. 22.
Lock: *See*—
Tractor fifth-wheel safety lock.
Lock mechanism. H. J. Feldmann. 2,462,827, Feb. 22.
Locking device. H. Cohen. 2,462,164, Feb. 22.
Locking device, Threaded. E. R. Boots. 2,462,603, Feb. 22.
Locking device, Window. B. P. Sparks. 2,462,434, Feb. 22.
Locking means for a hinged impact mass or weight for marine equipment. J. Kahl. 2,462,268, Feb. 22.
Lubricating oils, Preparing. P. H. Carnell. 2,462,360, Feb. 22.
Luminaire. F. C. Winkler and B. A. Wyman. 2,462,243, Feb. 22.
Luminescent materials, Manufacture of. H. W. Leverenz. 2,462,517, Feb. 22.
Machine for marking the surface of a column of plastic materials. F. I. Gase. 2,462,628, Feb. 22.
Magnesium oxide, Preparing an activated. J. J. Naugle. 2,462,277, Feb. 22.
Maleic anhydride from maleic acid, Production of. J. M. Weiss. 2,462,444, Feb. 22.
Manganese values from manganese ores, Recovering. R. D. Hoak. 2,462,499, Feb. 22.
Material serving apparatus. Y. A. Bouget. 2,462,303, Feb. 22.
Mattress. L. W. Warner. 2,462,579, Feb. 22.
Measuring device and method, Area. M. Blau and J. R. Carlin. 2,462,351, Feb. 22.
Measuring thickness of curved sections and apparatus therefor. H. Friedman. 2,462,088, Feb. 22.
Mechanism for carbines, Automatic. R. Rudd. 2,462,130, Feb. 22.
Member for socket wrenches, Manipulating. E. L. Deck. 2,462,729, Feb. 22.
Metal-glass seals, Making. R. R. Machlett and G. W. Steen. 2,462,205, Feb. 22.
Metal products and making same, Radioactive. C. W. Wallhausen and H. H. Dooley. 2,462,241, Feb. 22.
Metal surfaces and producing same, Protectively coated ferrous. V. C. J. Nightingall. 2,462,763, Feb. 22.
Meter: *See*—
Phase angle meter.
Phase-sensitive self-balancing frequency meter.
Meter resetting mechanism, Parking. F. C. Burum. 2,462,610, Feb. 22.
Methyl siloxanes, Making. J. F. Hyde. 2,462,640, Feb. 22.
Micrometer, Divider setting. F. E. Zehring. 2,462,589, Feb. 22.
Mixer and cooler for drinks, Combined. J. Loyes. 2,462,757, Feb. 22.
Modernistic spring metal folding chair. V. Q. Flinn. 2,462,377, Feb. 22.
Modified plug gauge. P. A. Penjaska. 2,462,545, Feb. 22.
Modulator. E. S. Grimes. 2,462,093, Feb. 22.
Moistureproof, heat-sealable wrapping material and process. P. M. Hauser. 2,462,185, Feb. 22.
Moisture removing device for deep freezers. R. O. Abeling. 2,462,705, Feb. 22.
Molding machine, Injection. R. W. Dinzl. 2,462,308, Feb. 22.
Monomeric fluorine compounds containing a four-carbon atom ring. P. L. Barrick. 2,462,345, Feb. 22.
Motor: *See*—
Quiet single-phase motor.
Motor construction. R. W. Esarey. 2,462,172, Feb. 22.
Motor control system. G. E. Stoltz. 2,462,233, Feb. 22.
Motor control system, Electric. E. R. Ziegler. 2,462,249, Feb. 22.
Motor control system, Generator for. J. R. Erbe and G. A. Caldwell. 2,462,171, Feb. 22.
Motor having coaxial counterrotating shafts. D. A. Guerdan and J. E. Bluman. 2,462,182, Feb. 22.
Motor rotor, Induction. R. G. Le Tourneau. 2,462,516, Feb. 22.
Motor shaft. E. C. Horton and E. V. Schaal. 2,462,192, Feb. 22.
Motor with bore-centered bearings, Electric. L. R. Ludwig. 2,462,204, Feb. 22.
Mounting: *See*—
Oscillator tube mounting.
Mounting means for vacuum tubes. F. R. Farrow, Jr. 2,462,622, Feb. 22.
Mounting of filaments in vacuum tubes. C. H. Foulkes. 2,462,084, Feb. 22.
Moving picture film reel. J. M. Goldberg. 2,462,261, Feb. 22.
Multicylinder engine. G. R. Hamel. 2,462,492, Feb. 22.
Multiple-clutch mechanism. J. O. Berndtson. 2,462,457, Feb. 22.
Multiposition switch. J. F. Beal. 2,462,594, Feb. 22.
Musical vibration translating unit. B. Minshall. 2,462,531, Feb. 22.
N,N' dimethylethanolamine, Preparation of. W. F. Gresham. 2,462,736, Feb. 22.
Navigation system. W. J. O'Brien. 2,462,764, Feb. 22.
Navigational system. L. G. Duggar. 2,462,077, Feb. 22.
Needle, Circular knitting. V. M. Delaney. 2,462,478, Feb. 22.
Nonskid device for automobiles. C. H. Welch. 2,462,584, Feb. 22.
Nonskid tire chain. F. G. Fox. 2,462,378, Feb. 22.
Nursing bottle holder. M. A. Helixon. 2,462,187, Feb. 22.
Oil containing an anti-oxidant, Lubricating. L. T. Eby and L. A. Mikeska. 2,462,616, Feb. 22.
Oil soluble petroleum sulfonates, Preparation of. P. M. Ruedrich. 2,462,829, Feb. 22.
Oleaginous materials, Stabilization of. F. A. Norris. 2,462,663–4, Feb. 22.
1,4-dicyano-2-butene, Preparation of. G. F. Hager. 2,462,388, Feb. 22.
One-way expansible band brake. F. N. Smith. 2,462,565, Feb. 22.
Opener, Can. A. E. Nelson. 2,462,416, Feb. 22.
Operating mechanism for electrical switches. A. M. Trogner. 2,462,842, Feb. 22.
Opposed piston engine. G. B. Gehrandt. 2,462,092, Feb. 22.
Organic compound polymerization process. M. M. Brubaker and R. A. Jacobson. 2,462,354, Feb. 22.
Organic compounds, Stabilization of. R. B. Thompson and J. A. Chenicek. 2,462,237, Feb. 22.
Organic oxygen-containing compounds, Synthesis of. W. F. Gresham. 2,462,738, Feb. 22.
Organic thiocyanates and isothiocyanates, Preparation of. N. E. Searle. 2,462,433, Feb. 22.
Organo-siloxane polymers and preparing them. J. F. Hyde. 2,462,267, Feb. 22.
Oscillation generator. C. W. Earp. 2,462,078, Feb. 22.
Oscillator tube mounting. F. H. Drake. 2,462,870, Feb. 22.
Oscillator, Ultra high frequency. J. H. Fremlin. 2,462,085, Feb. 22.
Outside pipe cutter. W. W. Smith. 2,462,230, Feb. 22.
Pacifier. N. P. Steckler. 2,462,786, Feb. 22.
Packer and weigher with jigging device, Bag. H. S. Rhodes. 2,462,286, Feb. 22.
Packing. A. J. Bent. 2,462,596, Feb. 22.
Pad: *See*—
Protector pad.
Pan with painted exterior surfaces, Tin coated baking. J. H. Debs. 2,462,728, Feb. 22.
Parachute. L. E. Supina. 2,462,234, Feb. 22.
Pedal and switch, Accelerator. J. J. O'Reilly. 2,462,767, Feb. 22.
Phase angle meter. G. W. Nagel and M. A. Schultz. 2,462,218, Feb. 22.
Phase modulation system. L. E. Norton. 2,462,417, Feb. 22.
Phase-sensitive self-balancing frequency meter. W. H. Gille. 2,462,630, Feb. 22.
Phosphors and preparing same, Doubly activated infrared. J. J. Pitha and R. Ward. 2,462,547, Feb. 22.
Photo identification for checks. B. L. Goldwater. 2,462,735, Feb. 22.
Photocatalytic reactions, Process and apparatus for. J. H. Percy. 2,462,669, Feb. 22.
Photoelectric cell color temperature measuring device. H. L. Woodward, Jr. 2,462,823, Feb. 22.
Photoelectric exposure time and paper selector for photographic enlargers having slide rule type computers and stepwedges. A. Simmon. 2,462,339, Feb. 22.
Photographic antihalation elements. D. M. McQueen. 2,462,527, Feb. 22.
Photographic elements having hydrophilic polyvinyl acetal colloid sub-layers. D. W. Woodward. 2,462,151, Feb. 22.
Photographic elements, Light-sensitive. O. W. Murray. 2,462,534, Feb. 22.
Photographic plural emulsion layer stripping film. A. B. Jennings. 2,462,503, Feb. 22.
Physicochemical analysis, Method and apparatus for. L. B. Lipson. 2,462,270, Feb. 22.
Picks and like tools. J. C. Roche. 2,462,427, Feb. 22.
Pillow envelope and bed sheet, Combination. M. Schiller. 2,462,780, Feb. 22.
Pipe clamp. S. M. Kass. 2,462,504, Feb. 22.
Pipe coupling. U. T. Walker. 2,462,575, Feb. 22.
Pipe joint. R. Batchler. 2,462,348, Feb. 22.
Pipe plug. J. Johnson. 2,462,748, Feb. 22.
Pistol, Full automatic. H. J. Kennedy. 2,462,505, Feb. 22.
Piston. G. C. Ramspeck. 2,462,550, Feb. 22.
Piston construction for internal-combustion engines and sleevelike piston ring construction therefor. R. W. Stadlman. 2,462,567, Feb. 22.
Plane, Power lift. D. K. Warner. 2,462,578, Feb. 22.
Plastic composition. A. C. Buechele. 2,462,053, Feb. 22.
Plasticizers or softeners for butyl rubber, Chemical. J. Rehner, Jr., and P. J. Flory. 2,462,674, Feb. 22.
Plate for pin setting frames, Wear. R. F. Palmer. 2,462,543, Feb. 22.

Pliers, Inductively heating. F. N. Darmara. 2,462,072, Feb. 22.
Pliers, Parallel jaw. A. J. Muter. 2,462,536, Feb. 22.
Plug: *See*—
Pipe plug.
Polisher, Vibratory. R. R. Butts. 2,462,068, Feb. 22.
Regulating system, Speed. J. F. Kovalsky. 2,462,203, Feb. 22.
Regulating system, Temperature. C. L. Mershon. 2,462,207, Feb. 22.
Regulating system, Voltage. G. H. Fletcher. 2,462,624, Feb. 22.

Slicer, Rotary potato. S. M. Kobey. 2,462,105, Feb. 22.
Slidable vane pump. J. Dusevoir. 2,462,732, Feb. 22.
Slider for slide fasteners, Automatic lock. W. Mikulas and L. L. Jones. 2,462,528, Feb. 22.
Slides and control mechanism therefor, Cross. M. G. Himoff and S. L. Casella. 2,462,498, Feb. 22.
Tetrachlorophthalic diesters. G. J. Bohrer. 2,462,601, Feb. 22.
Thermionic valve. J. Foster. 2,462,082, Feb. 22.
Thermistor, Head. F. H. Drake and P. B. King, Jr. 2,462,369, Feb. 22.
Thermostatic valve. R. C. Johnson. 2,462,198, Feb. 22.
Thiophene-2-carboxylic acid. V. Weinmayr. 2,462,697,

Pliers, Inductively heating. F. N. Darmara. 2,462,072, Feb. 22.
Pliers, Parallel jaw. A. J. Muter. 2,462,536, Feb. 22.
Plug: *See*—
Pipe plug.
Polisher, Vibratory. R. R. Butts. 2,462,068, Feb. 22.
Polishing method and apparatus. A. H. Eppler. 2,462,480, Feb. 22.
Polyalkylbenzyl phenols, Preparation of. O. M. Reiff and H. D. Hartough. 2,462,426, Feb. 22.
Polyethylene compositions. C. S. Myers. 2,462,331, Feb. 22.
Polymeric compounds from 1,3-dioxalane. W. F. Gresham. 2,462,737, Feb. 22.
Polymers from ethylene and carbon dioxide. D. E. Sargent. 2,462,680, Feb. 22.
Polymers, Separation of. J. R. Skeen. 2,462,564, Feb. 22.
Polysulfonyl chlorides, Preparation of. S. R. Detrick, W. H. Lockwood, and N. Whitman. 2,462,730, Feb. 22.
Pool game table. S. H. McNair. 2,462,526, Feb. 22.
Power lift, Controllable hydraulic. F. T. Court. 2,462,722, Feb. 22.
Power lift mechanism, Hydraulic. W. H. Worthington and E. F. Jirsa. 2,462,246, Feb. 22.
Practice device for golf putting. W. Pinder. 2,462,420, Feb. 22.
Precision machine tool. F. Turrettini. 2,462,573, Feb. 22.
Pregnene compounds, Treating. L. H. Sarett. 2,462,133, Feb. 22.
Press: *See*—
Automatic drill press.
Pressing iron rack. C. R. Hawkins. 2,462,319, Feb. 22.
Primer, Rocket. L. A. Skinner. 2,462,185, Feb. 22.
Print control device for photographic enlargers. A. Simmon and L. L. Weisglass. 2,462,340, Feb. 22.
Printing apparatus, Silk-screen. S. R. Wellborn. 2,462,447, Feb. 22.
Projectile, Rocket. C. N. Hickman. 2,462,099, Feb. 22.
Protective switch. C. E. Mosley. 2,462,212, Feb. 22.
Protector pad. D. Ortleb. 2,462,768, Feb. 22.
Puller: *See*—
Staple puller.
Pulse receiving and repeating system. C. M. Theillaumas. 2,462,144, Feb. 22.
Pulses, Generation of electric. P. K. Chatterjea, D. M. Ambrose, and J. K. Beney. 2,462,071, Feb. 22.
Pump: *See*—
Fluid pump. Slidable vane pump.
Pump. E. A. Cuny. 2,462,725, Feb. 22.
Pump. C. A. Erickson. 2,462,372, Feb. 22.
Pump or motor, Sliding vane. M. E. Estey. 2,462,481, Feb. 22.
Pump plunger. J. D. Cunningham. 2,462,257, Feb. 22.
Pump with easily removable rotor, Rotary. C. A. Namur. 2,462,214, Feb. 22.
Purifier, Crude oil. G. M. Castellanos. 2,462,466, Feb. 22.
Quiet single-phase motor. C. B. Hathaway and R. F. Woll. 2,462,184, Feb. 22.
Rack: *See*—
Article supporting rack. Pressing iron rack.
Rack. J. E. Holmes. 2,462,321, Feb. 22.
Radio communication system. P. K. Chatterjea and L. W. Houghton. 2,462,069, Feb. 22.
Radio direction finder. R. H. Herrick. 2,462,188, Feb. 22.
Radio receiver, Noise reducing. C. J. B. Rheams. 2,462,224, Feb. 22.
Radio transmitting system. W. H. Grosselfinger. 2,462,131, Feb. 22.
Rail fastener. C. Philips. 2,462,771, Feb. 22.
Rail, Miniature railroad. E. J. Daughton. 2,462,073, Feb. 22.
Rake and stacker, Combination sweep. T. H. and H. N. Young and J. B. Rambo. 2,462,152, Feb. 22.
Rat or mouse trap. E. H. Elleby. 2,462,479, Feb. 22.
Ratchet and pawl mechanism for hand brakes. G. E. Dath. 2,462,167, Feb. 22.
Ratchet and pawl mechanism for hand brakes. S. B. Haseltine. 2,462,183, Feb. 22.
Reaction products of polyfluoroethylenes and terminally unsaturated compounds. P. L. Barrick. 2,462,347, Feb. 22.
Reaction products of 3-hexenedinitrile and certain aldehydes. C. M. Langkammerer. 2,462,407, Feb. 22.
Receiver, Ash. C. Hendricks. 2,462,397, Feb. 22.
Receiver with automatic frequency control, Telegraphy. M. G. Crosby. 2,462,470, Feb. 22.
Recording electric signals. F. R. Thomas. 2,462,145, Feb. 22.
Rectifier. C. C. Hein. 2,462,186, Feb. 22.
Reducer, Frequency. H. M. Huge. 2,462,322, Feb. 22.
Reel: *See*—
Fishing reel. Spring reel.
Moving picture film reel.
Reel. D. Larkin. 2,462,408, Feb. 22.
Refrigerating apparatus with charging plug. J. M. Murphy. 2,462,535, Feb. 22.
Refrigerator, Including controls for the refrigerating system thereof, Multiple compartment. C. Passman. 2,462,279, Feb. 22.
Refrigerator system, Two-temperature. P. D. Van Vliet and B. J. Homkes. 2,462,240, Feb. 22.
Regulating system, Speed. J. F. Kovalsky. 2,462,203, Feb. 22.
Regulating system, Temperature. C. L. Mershon. 2,462,207, Feb. 22.
Regulating system, Voltage. G. H. Fletcher. 2,462,624, Feb. 22.
Regulator. H. A. Wheeler. 2,462,796, Feb. 22.
Relaying system for polyphase circuits, Protective. S. L. Goldsborough. 2,462,179, Feb. 22.
Release coupling. C. N. Nicodemus and A. E. Gregg. 2,462,540, Feb. 22.
Remote control arrangement. C. T. Scully. 2,462,134, Feb. 22.
Remote-control system. A. J. Wohlgemuth. 2,462,343, Feb. 22.
Resin, Pitch. H. R. Batchelder. 2,462,593, Feb. 22.
Resin, Production and use of synthetic. R. G. Booty. 2,462,252–3, Feb. 22.
Resins and conductors insulated therewith. H. F. Minter. 2,462,209, Feb. 22.
Resistor, Metallic oxide. H. Christensen and J. J. Kleimack. 2,462,162, Feb. 22.
Resonator, High-frequency. M. R. Hubbard. 2,462,639, Feb. 22.
Retractor, Ironing cord. E. J. Brier and W. G. McCue. 2,462,464, Feb. 22.
Reversing tool. C. R. Edwards. 2,462,478, Feb. 22.
Revolutions counter actuator. C. K. Studley, Jr. 2,462,690, Feb. 22.
Roller window screen. W. Marbach. 2,462,520, Feb. 22.
Rotary abrading tool. E. W. Hall. 2,462,741, Feb. 22.
Rotary converter-coupling hydraulic power transmission. A. Lysholm. 2,462,652, Feb. 22.
Rubber latex, Treatment of synthetic. E. Arundale. 2,462,591, Feb. 22.
Rubber scraps, Treating. T. M. Knowland. 2,462,645, Feb. 22.
Safety joint. C. R. Edwards. 2,462,477, Feb. 22.
Safety valve. S. E. Richeson and J. A. Allegro. 2,462,287, Feb. 22.
Salts of adiponitrile sulfonic acid. C. M. Langkammerer. 2,462,406, Feb. 22.
Saw, Tree-felling circular. C. V. Fuqua. 2,462,314, Feb. 22.
Scaffold. M. Sachs. 2,462,429, Feb. 22.
Scarf, Neck. P. G. Daniels. 2,462,727, Feb. 22.
Scoop and siphon for water-cooling systems. J. H. Wilson. 2,462,450, Feb. 22.
Scoop, Power. T. S. Scribner. 2,462,432, Feb. 22.
Scrap removing device. H. F. Allen. 2,462,707, Feb. 22.
Screen: *See*—
Roller window screen.
Screening. F. W. Benedict. 2,462,595, Feb. 22.
Sea wall, Self-adjusting. S. M. Pontiere. 2,462,775, Feb. 22.
Seal for pipe-line fittings. L. S. Hamer. 2,462,493, Feb. 22.
Seal for resisting high pressures. D. J. Whittingham. 2,462,586, Feb. 22.
Seal, Resilient lubricant. L. R. Buckendale. 2,462,067, Feb. 22.
Sear mechanism. V. H. Wesson. 2,462,585, Feb. 22.
Sear release mechanism. J. L. Lochhead. 2,462,114, Feb. 22.
Selective-pole tripping system. S. L. Goldsborough and J. L. Blackburn. 2,462,180, Feb. 22.
Selsyn transmission by radio. W. C. Mikkelson and J. Anthes. 2,462,117, Feb. 22.
Servo system, Electrical. E. J. Uhlig. 2,462,238, Feb. 22.
Servomotor system. O. E. Esval. 2,462,081, Feb. 22.
Shaft coupling. G. E. Pulliam. 2,462,549, Feb. 22.
Shaping attachment for tenoning machines. J. H. Mansfield. 2,462,653, Feb. 22.
Sharpening device. W. H. Haydon. 2,462,637, Feb. 22.
Shaving machine. I. Florman. 2,462,625, Feb. 22.
Shear and sprayer, Power. R. Wirth. 2,462,701, Feb. 22.
Shelving, Demountable. O. N. Mueller. 2,462,330, Feb. 22.
Shield assembly, Ignition coil and filter. E. C. Hallett. 2,462,491, Feb. 22.
Shield for electric wall sockets. J. N. Leopold. 2,462,766, Feb. 22.
Ship of monolithic structure. J. N. Pew, Jr. 2,462,670, Feb. 22.
Shipping box. B. A. Wabshaw. 2,462,693, Feb. 22.
Shirt and trouser holder. C. C. Levin. 2,462,409, Feb. 22.
Shoe with resilient closure means. C. A. Juliuson. 2,462,324, Feb. 22.
Shot shell. W. L. Finlay and G. E. Hutchinson. 2,462,312, Feb. 22.
Showerhead. F. A. Kotches and W. D. Tipton. 2,462,752, Feb. 22.
Shutter control for cinematographic cameras. J. Bolsey. 2,462,302, Feb. 22.
Sighting device, Spectacle. K. Clark and K. O. Sisson. 2,462,468, Feb. 22.
Signal apparatus, Train carried cab. L. R. Allison. 2,462,454, Feb. 22.
Silica hydrogel and catalysts, Manufacture of. C. L. Thomas. 2,462,236, Feb. 22.
Singeing device for textile fabrics and the like. F. M. Crossman. 2,462,166, Feb. 22.
Ski binding. J. M. Piane. 2,462,281, Feb. 22.

Slicer, Rotary potato. S. M. Kobey. 2,462,105, Feb. 22.
Slidable vane pump. J. Dusevoir. 2,462,732, Feb. 22.
Slider for slide fasteners, Automatic lock. W. Mikulas and L. L. Jones. 2,462,526, Feb. 22.
Slides and control mechanism therefor, Cross. M. G. Himoff and S. L. Casella. 2,462,498, Feb. 22.
Smoke passage, Built-in circuitous. S. R. Wellborn. 2,462,446, Feb. 22.
Snap fastener attaching tool. C. D. Buckley. 2,462,801, Feb. 22.
Soap dish, Combined. M. Applebaum. 2,462,299, Feb. 22.
Soldering apparatus, Electric. G. L. Ward. 2,462,148, Feb. 22.
Soldering iron. E. H. Rustin. 2,462,131, Feb. 22.
Sound, Reproduction of. H. E. Haynes. 2,462,263, Feb. 22.
Sound system which compensates for variable noise levels. F. A. Morris. 2,462,532, Feb. 22.
Spacer, Conduit. W. H. D. Hinchman. 2,462,399, Feb. 22.
Spark gap device. J. B. Owens. 2,462,219, Feb. 22.
Speed control for induction motors. G. Koehler. 2,462,751, Feb. 22.
Speed controlling means for direct current motors. G. G. Mozzanini and M. Lebertre. 2,462,120, Feb. 22.
Splint, Match. M. Polacsek. 2,462,772–3, Feb. 22.
Spreader, Mortar. T. Kimura. 2,462,644, Feb. 22.
Spring. J. W. Cook. 2,462,363, Feb. 22.
Spring oscillating chair. R. R. Marriott. 2,462,521, Feb. 22.
Spring reel. C. R. Yirava. 2,462,296, Feb. 22.
Squeegee supporting and guiding structure. H. Fleisher and G. H. Tillett. 2,462,376, Feb. 22.
Stabilizer, Steering. G. W. Martin. 2,462,272, Feb. 22.
Staple puller. H. D. Andrews. 2,462,250, Feb. 22.
Stapling device. A. L. Flamm. 2,462,623, Feb. 22.
Starch esters. O. A. Moe. 2,462,210, Feb. 22.
Static elimination in manometers. C. F. Wallace. 2,462,820, Feb. 22.
Steam treating apparatus. R. L. Parker. 2,462,220, Feb. 22.
Steriliser for barbers' implements. A. Di Filippo. 2,462,475, Feb. 22.
Stiffness and bending strength tester for thin sheet materials. R. D. De Waard, C. R. Stryker, and A. F. Blockman. 2,462,826, Feb. 22.
Stilbene bis triazole azo dyestuffs. E. Keller and R. Zweidler. 2,462,405, Feb. 22.
Stock for firearms, Collapsible. J. C. Garand. 2,462,091, Feb. 22.
Stop for gate valves, Adjustable. E. P. De Craene. 2,462,809, Feb. 22.
Stope jack. T. J. Niceley. 2,462,662, Feb. 22.
Stress analysis by X-ray diffraction. F. G. Firth. 2,462,374, Feb. 22.
Stroke control for cylinder and piston mechanisms, Magnetic. R. H. Thompson and H. Harvey. 2,462,571, Feb. 22.
Sulfur-containing polyamides. A. K. Schneider. 2,462,430, Feb. 22.
Sulfur hexafluoride, Purification of crude. J. F. Gall. 2,462,379, Feb. 22.
Sulfur, Stabilization of insoluble. R. H. Walcott and A. Schallis. 2,462,146, Feb. 22.
Sunlight resistant composition. P. T. Gidley. 2,462,629, Feb. 22.
Support for shiftable curtain rods. W. G. Anderson. 2,462,344, Feb. 22.
Supporter, Hose. H. F. Callis. 2,462,161, Feb. 22.
Suspending device. N. M. Byrd. 2,462,719, Feb. 22.
Switch: *See*—
Dual action switch. Multiposition switch.
Electric switch. Protective switch.
Electrical switch.
Switch for discharge lamps, Control. L. W. Cook. 2,462,306, Feb. 22.
Switch for electric discharge devices, Starting. B. R. Reinhardt. 2,462,335, Feb. 22.
Switching system, Biasing potential. G. Deakin and H. F. Herbig. 2,462,074, Feb. 22.
Synchronized pulse generator. M. M. Levy. 2,462,109, Feb. 22.
System for comparison of phase shift of electric quantities. J. Ahler and J. Selz. 2,462,058, Feb. 22.
T square gauge. J. F. Donohue. 2,462,075, Feb. 22.
Table: *See*—
Folding table. Pool game table.
Table baseball. N. A. Dobé. 2,462,170, Feb. 22.
Tampon machine and making tampons. H. Gans. 2,462,178, Feb. 22.
Tank: *See*—
Elevated tank.
Tank filling control. J. B. Dryden. 2,462,076, Feb. 22.
Target, Modulated reflecting-resonant. E. J. Istvan. 2,462,102, Feb. 22.
Tearing and dividing equipment. H. H. Vickers. 2,462,692, Feb. 22.
Telegraph system. G. G. Light and R. E. Hanford. 2,462,112, Feb. 22.
Tension control apparatus. J. W. Olson and C. W. Bechle. 2,462,766, Feb. 22.
Tensioning device, Yarn. E. Richter. 2,462,288, Feb. 22.
Terminal, Battery. F. Akin. 2,462,453, Feb. 22.
Testing color vision. E. Freeman. 2,462,485, Feb. 22.
Tetrachlorophthalic diesters. G. J. Bohrer. 2,462,601, Feb. 22.
Thermionic valve. J. Foster. 2,462,082, Feb. 22.
Thermistor, Head. F. H. Drake and P. B. King, Jr. 2,462,369, Feb. 22.
Thermostatic valve. R. C. Johnson. 2,462,198, Feb. 22.
Thiophene-2-carboxylic acid. V. Weinmayr. 2,462,697, Feb. 22.
Thread-tension device for sewing machines. F. Parry and B. P. Pinkvose. 2,462,812, Feb. 22.
Thrust device, Electric. J. J. Moynihan. 2,462,533, Feb. 22.
Tire chain latch. L. Cuilllerrier. 2,462,472, Feb. 22.
Tool: *See*—
Camber adjusting tool. Rotary abrading tool.
Precision machine tool. Snap fastener attaching tool.
Reversing tool.
Tool and release therefor, Toggle actuated. E. D. Ball. 2,462,709, Feb. 22.
Tool assembly. H. M. Griffin. 2,462,386, Feb. 22.
Toolholder. S. M. Booth. 2,462,716, Feb. 22.
Top for convertible automotive vehicles, Ever-ready rigid. A. C. O'Neal. 2,462,667, Feb. 22.
Torpedo exploding mechanism. C. T. Minkler. 2,462,118, Feb. 22.
Totaquine, Production of. J. B. Shohan. 2,462,782, Feb. 22.
Toy repeating rubber band gun. J. R. Crnich. 2,462,723, Feb. 22.
Toy, Whirling. U. T. Walker. 2,462,576, Feb. 22.
Track for vehicles, Endless. P. H. Johnson and L. W. Tripp. 2,462,643, Feb. 22.
Tractor fifth-wheel safety lock. C. L. Moore. 2,462,211, Feb. 22.
Tractor hitch bracket. D. Currie. 2,462,726, Feb. 22.
Trailer chimney. L. C. Goodwin. 2,462,383, Feb. 22.
Trailer, Tractor. G. B. and M. H. Kahres. 2,462,404, Feb. 22.
Transformer, Electric. W. Kram. 2,462,106, Feb. 22.
Translator and making it, Electrical. K. M. Olsen. 2,462,218, Feb. 22.
Transmission line, Folded. N. E. Lindenblad. 2,462,410, Feb. 22.
Transmission line system. R. S. Wehner. 2,462,443, Feb. 22.
Transmission mechanism. P. Bartelt. 2,462,060, Feb. 22.
Transmission oil filter means. H. H. Trail. 2,462,819, Feb. 22.
Transmitting device, Fluid. W. Ferris. 2,462,734, Feb. 22.
Trap: *See*—
Rat or mouse trap.
Trifluoromethylhexachlorocyclohexane. E. T. McBee and L. D. Bechtol. 2,462,654, Feb. 22.
Tube with filamentary cathode, Vacuum. J. A. Victoreen. 2,462,441, Feb. 22.
Tube with storage properties, Television receiving. G. C. Sziklai. 2,462,569, Feb. 22.
Turbine. G. K. W. Boestad and E. O. Eriksson. 2,462,600, Feb. 22.
Turbine pump type hydraulic coupling. G. W. Peterson. 2,462,223, Feb. 22.
Turnbuckle. P. G. Gleason. 2,462,382, Feb. 22.
Two-piece plastic loose-leaf memorandum sheet holder. M. E. Trollen. 2,462,789, Feb. 22.
Typewheel positioning mechanism for printing telegraph apparatus. R. D. Salmon. 2,462,132, Feb. 22.
Umbrellas, Tiltable. E. Schmidt. 2,462,560, Feb. 22.
Undergarment. A. R. Kneibler. 2,462,508, Feb. 22.
Universal joint. S. G. Wingquist. 2,462,700, Feb. 22.
Utensil, Compartmented culinary. E. M. Christensen. 2,462,362, Feb. 22.
Utensil, Vacuum type coffee-making. S. Battilani. 2,462,349, Feb. 22.
Valve: *See*—
Fluid valve. Thermionic valve.
Safety valve. Thermostatic valve.
Valve. F. E. Sette. 2,462,291, Feb. 22.
Valve actuating means. W. L. Parker. 2,462,544, Feb. 22.
Valve and hydraulic power device embodying such valves, Hydraulic. C. D. Watson. 2,462,580, Feb. 22.
Valve for thermal systems. O. O. Oaks. 2,462,217, Feb. 22.
Valve for windshield cleaners. W. C. Hess. 2,462,189, Feb. 22.
Valve system for hydraulic press circuits. R. K. Sedgwick. 2,462,815, Feb. 22.
Vaporizer, Electric. J. Robinson. 2,462,129, Feb. 22.
Variable inductance. F. Wood. 2,462,822, Feb. 22.
Vehicle: *See*—
Articulated railway vehicle. Water dispersible coating vehicle.
Vehicles having increased wet abrasion resistance, Protein water paint. J. C. Konen and B. W. Schroeder. 2,462,811, Feb. 22.
Vending machine, Pencil. C. B. Alexander. 2,462,298, Feb. 22.
Ventilator for motor vehicles. G. Grimith. 2,462,634, Feb. 22.
Ventilator, Window. W. B. Nye. 2,462,278, Feb. 22.

Vessel for storage of liquids at abnormally high or low temperatures, Pressure. H. C. Boardman. 2,462,064, Feb. 22.
Vinyl ethers, Preparation of. D. G. Botteron. 2,462,602, Feb. 22.
Welding apparatus. S. Schneider. 2,462,561, Feb. 22.
Welding apparatus, Spot. M. Beymer. 2,462,458, Feb. 22.
Welding using partially sheared cut projections, Resistance. J. W. Kehoe and J. B. Dym. 2,462,199, Feb. 22.
Wheel balancing apparatus, Static. G. H. Howard.

Vessel for storage of liquids at abnormally high or low temperatures, Pressure. H. C. Boardman. 2,462,064, Feb. 22.
Vinyl ethers, Preparation of. D. G. Botteron. 2,462,602, Feb. 22.
Vinyl halides, Polymerising. L. Plambeck, Jr. 2,462,422, Feb. 22.
Vinylidene chloride compositions stable to light. L. A. Matheson and R. F. Boyer. 2,462,412, Feb. 22.
Visor, Sun. E. F. Burdick. 2,462,304, Feb. 22.
Voltage multiplier. D. Canady. 2,462,804, Feb. 22.
Vulcanising rubbery butadiene polymers with dixanthic disulfides. M. C. Throdahl. 2,462,572, Feb. 22.
Walker or toy vehicle. A. Rodriques. 2,462,814, Feb. 22.
Warning magnetic unit. J. C. Booth. 2,462,715, Feb. 22.
Warp sizing material. F. G. La Piana. 2,462,108, Feb. 22.
Water dispersible coating vehicle. G. E. Ellerman. 2,462,616, Feb. 22.
Water filter. P. L. Boucher. 2,462,604, Feb. 22.
Water softener. J. V. Barnes. 2,462,154, Feb. 22.
Wax injection apparatus. S. Lipson, H. Rosenthal, and H. Markus. 2,462,113, Feb. 22.
Web material, Method and apparatus for drying. A. G. Gautreau. 2,462,380, Feb. 22.
Welded motor frame. W. J. Oesterlein. 2,462,765, Feb. 22.
Welding apparatus. S. Schneider. 2,462,561, Feb. 22.
Welding apparatus, Spot. M. Beymer. 2,462,458, Feb. 22.
Welding using partially sheared cut projections, Resistance. J. W. Kehoe and J. B. Dyas. 2,462,199, Feb. 22.
Wheel balancing apparatus, Static. G. H. Howard. 2,462,266, Feb. 22.
Wheelbarrow. R. A. Popplewell. 2,462,424, Feb. 22.
Winch control. H. S. Jacobs. 2,462,747, Feb. 22.
Wind-pressure gauge. J. P. Warren. 2,462,577, Feb. 22.
Winding coils. J. K. Hodnette and A. D. Forbes. 2,462,191, Feb. 22.
Winding device. W. J. Elvin and E. R. Stahl. 2,462,310, Feb. 22.
Winding machine. J. M. England. 2,462,620, Feb. 22.
Window shade bracket. G. McCormick, Jr. 2,462,525, Feb. 22.
Wire spring structure for seat and back constructions. W. H. Neely and S. G. Blumensaadt. 2,462,539, Feb. 22.
Wire straightener. R. D. Heller. 2,462,396, Feb. 22.
Worktable for belt grinders and the like. D. E. Sutton. 2,462,788, Feb. 22.
Wrapping machine and method, Multiple lane. S. J. Campbell. 2,462,254, Feb. 22.
Wrench having manually-controlled slidable-wedge jock, Pivoted side-jaw. E. E. Cooper. 2,462,364, Feb. 22.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 22, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number
